5.10 p.m.: Through station VLH15 on the 19 metre band.

NOW OPEN FOR INVESTMENT

State Electricity Commission of Victoria

£4,250,000

Power Loan

4¾%

for 10 or 15 years

An amount of £4,250,000 is sought for capital works now being constructed to increase electric power resources. Since these works are essential for national development, subscription of funds on the attractive terms offered merits the consideration of both large and small investors.

STATUS OF COMMISSION
The Commission is Australia's largest electricity authority. Capital assets now approximate £157,000,000. Revenue for last financial year was approximately £21,000,000, and operation of the business continues to show a satisfactory surplus. Expansion of the undertaking is financed only by loan money.

MAXIMUM INTEREST
The maximum gilt-edged interest rate of £4/15/ per cent will be paid. Interest begins immediately funds are lodged, and will be paid half-yearly during the term selected.

GILT-EDGED SECURITY
The loan is secured on the revenues of the Commission. Regular payment of interest and repayment of principal in full at maturity are guaranteed by the Government of Victoria.

PRICE AND TERM
Inscribed stock or debentures will be issued at par. Investors on application may choose a term of 10 or 15 years. Any amount in multiples of £50 may be invested.

INSTALMENT PAYMENTS
Investments may be made by an initial deposit of one-tenth, and the balance in one amount or three equal instalments by January 15, 1954.

TRUSTEE INVESTMENTS
The loan is an authorised investment for trustees in Victoria, Queensland, Western Australia and Tasmania. It it very attractive for non-taxable funds.

FREE OF EXCHANGE
Application money will be accepted free of exchange throughout Australia. Interest will be payable free of exchange throughout Victoria and at any interstate branch of the National Bank.

PROSPECTUS AND APPLICATIONS.

The full prospectus can be obtained from and applications may be lodged with any office of the Commonwealth Bank or The National Bank (including The Queensland National Bank); members of recognised Stock Exchanges; or any of the Commission's offices. The loan will close not later than Tuesday, November 24, 1953.

Underwritten by J. B. Were and Son.

State Electricity Commission of Victoria. Head Office: 22 William Street, Melbourne

The Federal Budget — 1953-54

In his Budget Speech on 9th September, the Federal Treasurer, Sir Arthur Fadden, announced several changes which are of interest to listed companies and shareholders generally.

1. PROPERTY TAX ABOLISHED.—It has been decided to abolish, as from 1st July, 1953, the differential tax on property income, such as rent, interest and dividends from companies.

Previously property tax, at rates varying from 4d. to 16d. in the £1, had been superimposed on the basic tax which is payable on income both from personal exertion and from property. The additional tax on property did not apply to incomes under £400 or over £10,000.

2. MINING PROFITS.—It has been decided to extend for a period of 7 years from 1st July, 1953, the arrangement exempting from taxation one-fifth of the profits earned from mining for prescribed metals and minerals, the list of which has been enlarged. The exemption will extend to dividends paid by companies wholly out of exempt mining profits.

3. COMPANY TAXATION.—The rates of tax payable by public companies on income of the year ended 30th June, 1953, will be 6/- in the £1 on the first £5,000 of taxable income, and 7/- on the excess income. The general result will be a reduction of 1/- in the £1 on the first £5,000 of taxable income, and 2/- in the £1 on the excess income.

4. SALES TAX.—It has been decided to remove those rates of sales tax previously standing at 50%, 33⅓% and 20%. The majority of goods previously subject to those rates will now be subject to 16⅔%. Some goods, mainly sporting equipment, previously taxed at 20%, will be transferred to the general rate of 12½%.

5. PAYROLL TAX.—The annual exemption has been raised from £1,040 to £4,160 on wages payable after 1st October, 1953. This will reduce the number of employers paying the tax from 90,000 to 50,000.

Recent Loan Issues

COMMONWEALTH £82,921,000 CASH & CONVERSION LOANS.—The Commonwealth Treasurer, Sir Arthur Fadden, announced on October 20 that the 18th Security Loan for £50,000,000, which closed on October 17, was over-subscribed by £15,800,000.

In response to the offer to convert £32,921,000 of 2% securities maturing on October 15, conversions amounted to £28,562,000 (86%) and £3,044,000 had been redeemed. Securities still outstanding totalled £1,300,000.

AUSTRALIAN GASLIGHT CO.—Applications close November 6 for "1959-1968" Registered Debentures Loan of £1,000,000, repayable December 1, 1959 or 1968, at the option of the subscriber. The issue includes conversion of £750,000 "1953" Debentures maturing December 1, 1953. The issue has been underwritten.

COLONIAL GAS ASSOCIATION LTD.—Applications closed October 26, 1953, for £A482,000 5% Registered Third Series Debentures redeemable November 1, 1961; payable (a) in full on application or (b) 25% on application and 25% on each of the following—February 28, 1954; June 30, 1954, and October 30, 1954. The issue was underwritten.

KRAFT HOLDINGS LTD.—Applications close December 5, 1953, for £1,000,000 of 5% Registered Mortgage Debenture stock maturing December 31, 1968; payable in full on application or 25% on application and 25% on each of March 31, 1954; June 30, 1954, and September 30, 1954. The Company has the option to redeem between December 31, 1958, and December 31, 1963, at a premium of 2%, or thereafter at par. The issue has been underwritten.

STATE ELECTRICITY COMMISSION OF QUEENSLAND.—Applications close November 3 for Loan No. 7 of £500,000 at 4¾% repayable November 1, 1961, or 1973 at the option of the subscriber. The Loan, which is a trustee investment in Queensland, Tasmania and Western Australia, was underwritten.

STATE ELECTRICITY COMMISSION OF VICTORIA.—Applications close November 24 for Loan No. 134 of £4,250,000 at 4¾%, repayable 1st November, 1963 or 1968, at the options of the subscriber. The Loan is a trustee investment in Victoria, Queensland, Western Australia and Tasmania, and has been underwritten.

The requirements of Section 137 of the Companies Act 1936 of New South Wales have not been fully complied with in this advertisement, which is an abridgement of the full Prospectus. A copy of the full Prospectus dated 22nd October, 1953, has been filed for registration with the Registrar-General of the State of New South Wales, who takes no responsibility as to its contents. Certified copies have been filed with the Registrar of Companies in the State of South Australia, the Registrar-General of the State of Victoria, the Registrars of Companies in the States of Queensland and Western Australia, and with the Registrar of the Supreme Court of the State of Tasmania.

SOUTHERN ALUMINIUM LIMITED

Incorporated under the Companies Act 1936 of the State of New South Wales on the 25th January, 1951.

ABRIDGED PROSPECTUS

of an Issue at Par of 1,199,993 Ordinary Shares of 5/- each, payable in full on application.

AUTHORISED CAPITAL

4,000,000	Ordinary Shares of 5/- each	£1,000,000

ISSUED CAPITAL

800,007	Ordinary Shares of 5/- each (fully paid)	£200,002

PRESENT ISSUE

300,000	Ordinary Shares of 5/- each will be applied for by, and allotted in full to, Neal Investments Limited	£75,000
899,993	Ordinary Shares of 5/- each are now offered for public subscription	£224,998
2,000,000	TOTAL	£500,000

DIRECTORS:

HARRY JAMES BRIGDEN, 36 Grosvenor Road, Wahroonga, Chartered Accountant (Aust.).

REGINALD CLAYDON NEAVE, M.I.Prod.E., 53 Telegraph Road, Pymble; Production Engineer and Company Director.

GORDON REGINALD ALLMAN, F.I.I.A., 1 Braeside Street, Wahroonga; Market Research and Company Director.

PERCY JOHN LARKE, 14 Powell Street, Killara; Engineer and Company Director.

EDWARD JOHN CULEY, LL.B., 53 Carrington Road, Wahroonga; Solicitor.

WALTER REGINALD LOCKE, "Bellwood," King Street, Turramurra; Company Director.

ERIC RADCLYFFE LANE, 20 Khartoum Avenue, Gordon; Company Director.

SECRETARY AND REGISTERED OFFICE:

LESTER MALMSBURY LEVY, B.Ec., A.C.I.S., A.A.S.A., A.C.A.A., 207-213 William Street, Sydney.

GENERAL MANAGER:

GEORGE BUCHANAN FOOTE, B.Sc., F.I.M., Cosgrove Road, Enfield.

AUDITORS:

REGINALD NOEL DARLING, F.C.A. (Aust.), with RONALD ANDERSON DOUGLAS, F.C.A. (Aust.), Chartered Accountants (Aust.), 53 Martin Place, Sydney.

BANKERS:

BANK OF NEW SOUTH WALES.

SOLICITORS:

ALLEN, ALLEN & HEMSLEY, 53 Martin Place, Sydney.

CONSULTING ACCOUNTANTS TO THE ISSUE:

FLACK & FLACK, 31 Macquarie Place, Sydney.

BROKER TO THE ISSUE:

TONKIN & PLASTO, Eldon Chambers, 92 Pitt Street, Sydney (Members of the Sydney Stock Exchange).

SOUTHERN ALUMINIUM LIMITED IS ONE OF THE LARKE, HOSKINS GROUP.
THE BOARDS OF DIRECTORS OF SOUTHERN ALUMINIUM LIMITED, LARKE, HOSKINS & CO. LTD., AND NEAL INVESTMENTS LIMITED ARE THE SAME.

GENERAL

Southern Aluminium Limited will manufacture bars, rods, sections and tubes by the extrusion process. Its formation was inspired by the knowledge that, in Australia, the use of aluminium is still in its infancy; that the facilities for the extrusion of aluminium are particularly limited, and that the Commonwealth Government smelter in Tasmania should be ready to produce raw aluminium in 1954. The company's capacity will be a vital link in Australia's defence manufacturing potential.

Latest statistics indicate that in the U.S.A. the annual consumption of aluminium per head of population is 17 lb.; in the United Kingdom 12 lb., and in Australia less than 4 lb. There is a substantial unsatisfied demand for aluminium extruded products, of which imports have recently accounted for more than half of the total Australian consumption. Extrusion is the cheapest and most efficient way of forming tubes for irrigation pipes, rockets, furniture, scaffolding, television aerials and other purposes, as well as sections for window frames, glazing bars, electrical bus-bars, aircraft parts, shop fittings, decorative trim and special shapes for a very large variety of industries.

PROGRESS TO DATE.

Experienced personnel have been engaged for all key positions. Modern plant (costing £198,000) specially chosen for Australian requirements has been purchased in England; some of it has already arrived. Five acres of land have been purchased at Enfield. Foundations have been laid, underground stormwater drainage has been completed, and a concrete road built. Erection of the initial building is proceeding.

Aluminium Union Limited, world suppliers of aluminium ingot, have undertaken to supply the necessary raw ingot and have already been granted an import licence. Part of the Company's aluminium requirements will also be obtained from Tasmania when the Government smelter commences production.

OTHER EXTRUDERS OF ALUMINIUM.

In Australia at present there is only one press known to be operating solely on aluminium extruded products. Great Britain has more than fifty such presses, installed in nine aluminium-fabricating companies. In the United States there are at least seventy-two companies engaged in aluminium extrusion, and it is estimated that by the end of 1954 there will be more than one hundred such companies, operating about 250 presses between them.

THE INVESTMENT.

It is expected that production will commence by May, 1954. Profits should accrue within the first year of operation. In the second year, as forecast in the General Manager's Report, profit subject to tax should be 20% of capital required for this first stage.

As supplies of aluminium become more plentiful, it is expected that the consumption in Australia will increase rapidly, possibly trebling in the next ten years. Consumption of extruded aluminium products, which in Australia represent only 12% of the wrought aluminium products supplied compared with 24% to 28% overseas, will probably increase four-fold in the same period.

Planning is for the initial development of the Company to take place in two stages. It is expected that the second stage in the development, covering the installation of a second extrusion press, will be commenced after two years' operation. The General Manager's Report estimates the profit subject to tax to be 27% of the total capital required for the second stage.

PURPOSE OF THE ISSUE.

The money raised by this issue will be used to complete the factory building, to purchase further equipment and to cover stock and working expenses up to full production in the first stage. Application will be made for lising on the Stock Exchanges of Sydney, Melbourne, Adelaide, Brisbane and Perth as soon as practicable after allotment.

APPLICATION FORMS AND PROSPECTUS.

Application forms, together with copies of the full Prospectus, may be obtained from the registered office of the Company, 207-213 William Street, Sydney, or from the office of the Broker to the Issue.

APPLICATIONS.

All applications for Shares must be made on the form accompanying the Prospectus, and must be lodged with the Company at its registered office, 207-213 William Street, Sydney, or at the office of the Broker to the Issue, Tonkin & Plasto, 92 Pitt Street, Sydney, or through a member of any recognised Stock Exchange in Australia for transmission to the Broker to the Issue or to the Company. Subscription lists will open at 10 a.m. on 22nd October, 1953, and will remain open until 5 p.m. on 23rd November, 1953, with the right reserved to the Company to close the subscription lists at any time prior to 23rd November, 1953, if a full subscription has been received.

MINIMUM SUBSCRIPTION.

The minimum amount which in the opinion of the Directors must be raised by this Issue is £299,998.

The Adelaide Steamship Company Limited

g. Office: Currie St., Adelaide. **Directors:** R. G. Hawker (Chairman), Hon. Sir Walter G. Duncan, M.L.C., T. E. Barr Smith, H. H. Lloyd, M. H. E. Mackay. **Auditors:** J. W. Blair; E. F. Hunwick.

Year ended June 30, 1953. Meeting September 21, 1953.

Before provision of £50,000 for insurance and £75,000 for newals and replacements, profit was £11,614 higher at 52,887, returning 10.9% on capital. Dividend was raised from % to 5½%.

Catering for the interstate passenger and cargo trade, the mpany operates a fleet of 21 vessels, including the popular ssenger ships "Manoora" and "Manunda."

The "Manunda" was out of commission for four months due a fracture of a main engine crankshaft.

During the year obsolete vessels "Dilga," "Dundula," roadway," coal hulks "Rona," "Merion" and "Colonna," and inch "Aler" were disposed of. Orders have been placed for new 1,400 tons d.w. diesel cargo vessel to be named "Marra," d a small diesel-engined vessel to assist in removal of raw gar from North Queensland shallow draft ports.

The following address was given by the Chairman, Mr. G. Noall, o hareholders at the Annual Meeting on September 25:

Shareholders will have noticed that dividends received from the mpany's shareholdings showed an increase during the year of re than £850, this, of course, being due to some extent to the ease in capital which was effected in November of last year. set-off against this, there has been an unavoidable increase in eral expenses, but the net result may be considered most satisory and is considerably more than sufficient to continue the 8 cent. dividend.

The market value of the Company's investments shows, more ass, the same surplus over cost price as it did twelve months and your Directors are confident that the Company's securities are soundly invested and should continue to give satisfactory results.

The current financial year should undoubtedly be assisted by the general trading improvement which has taken place this year, and also by the favourable economic effects which may reasonably be expected from the Federal Budget. The reductions in company taxation and in sales tax should have a very definite beneficial effect on our economy, and it is expected should lead to some expansion in business. At the same time, it is felt that the cost of Governments in this country still remains too high, and also a general reduction in the cost of production is essential if Australia is to have any chance of competing in overseas markets. With these qualifications, your Directors are hopeful of the future outlook.

†Parent company balances June 30; subsidiaries, March 31.

Operating through a group of 36 subsidiaries, the organisation has firmly established interests in all States in the Commowealth, in New Zealand, Singapore and Bangkok, and extension to Indonesia is being considered. Widely diverse activities include (i) glass containers, window glass, flint blown and pressed ware, lighting ware and glass building bricks; (ii) plastics, covering a wide range of industrial, commercial, and domestic articles; (iii) wall tiles and various types of paper and cardboard packaging materials.

Group expenditure on land, buildings, plant and equipment during the year was £2,015,000, of which £914,707 was financed from depreciation allowances.

Stocks rose by £590,544, partly due to the need to carry larger stocks of finished goods following the return to more normal trading conditions.

The Australian Glass Manufacturers Co. Pty. Ltd., the original company, now produces less than one-third of the total turnover of the group. Bottle and jar plants are not working to full capacity, but trade has substantially recovered after a reduction during the early part of 1952/53.

Further details of the group's activities are given in the Chairman's Address, reprinted below.

At the Annual Meeting held on October 21 the Acting Chairman (Mr. J. A. Forrest) gave the following address:

Board of Directors.

At this meeting shareholders will miss Sir Alexander Stewart, who has sat at the Directors' table for over thirty years and taken the chair at each General Meeting since 1947.

About twelve months ago Sir Alex. Stewart informed the Board that he would like to retire to make way for a younger man. The Board was anxious to retain the benefit of his wisdom and experience, but they realised that he had served this company long and well, and finally, last month, his formal resignation was tendered and accepted with regret. I know all shareholders will join with me in expressing to Sir Alex. Stewart sorrow that he should see fit to retire and grateful thanks for what he has done for the company during his tenure of office. His former colleagues on the Board would also like to add their personal thanks for his unfailing courtesy to them while he occupied the chair.

In April last the Board decided to invite Mr. Walter Fr King to become a Director. That invitation was accepted. a am glad to welcome Mr. King here today.

Mr. King is a partner in Smith, Johnson & Co., Chartered countants, Sydney and Melbourne, and he has already shown there is much he can contribute to the Board's discussions.

Review of Accounts.

The Consolidated Statement of Profit and Loss shows after deducting provision for taxation, the earnings of the from all sources in Australia and overseas reached, for the ended 30th June, 1953, the all-time record total, in round fig of £1,012,000, an increase of £153,000, as compared with the vious year. The amounts provided for taxation by our Austr Companies were calculated at pre-Budget rates, and the conse over-provision will be adjusted in our accounts during the cu year. The rate of earnings on the average shareholders' employed during the year was 6.7%, a very small increase o only over the comparable figure for the previous year, viz.,

After transferring substantial amounts to General Reserves, e amount carried forward in the Profit and Loss Appropriation counts of the group is now £738,000.

Turning now to the Consolidated Statement of Assets and abilities:.

The first point of interest is that the Group Expenditure on nd, Buildings, Plant and Equipment during the year was 015,000. The continuance of this high rate of expenditure lends ight to the remarks later regarding depreciation allowances.

Amounts owing by our customers and other debit accounts re reduced by £681,000 from the high figure recorded in 1952 en the full effect of credit restrictions was still being felt.

Stocks on hand, including both finished goods and raw mate-ls, have increased by a further £591,000 to £6,511,000. As in-cated last year, the return to more normal trading conditions s necessitated our carrying much heavier stocks of finished ods than has been the case in recent years, and this situation likely to continue. All stocks have been carefully reviewed, d full provision has been made for any decline in values which y have occurred.

Our outside investments are almost unchanged in total as mpared with last year. Certain investments have been realised ease the liquid position of the group, but this factor has been most counterbalanced by purchases of securities by our Insur-ce Company, which, naturally, has substantial funds to invest ch year.

Looking at the other side of the statement, shareholders will te that a new item appears this year; that is, Mortgage on Over-as Freehold Property.

It has been our policy for some time now that, so far as pos-ble, expansion in overseas countries should be financed by locally-ised loan funds. In the initial stages of development in the st, and also of the recent expansion in New Zealand, we relied bank overdrafts. In the case of the East, in view of the special rcumstances existing, it was necessary for the Parent Company guarantee the overdraft, and the contingent liability under the arantee has been shown in our published accounts for some ars.

The plants at both Singapore and Bangkok have been built om the proceeds of this overdraft, together with profits retained r the purpose.

In New Zealand, however, it became desirable recently to con-rt some of the short-term liability into longer-dated borrowings. e therefore arranged a loan on mortgage of some of our free-lds in New Zealand, and that mortgage has been guaranteed by e Parent Company. The contingent liability under this guaran-e is noted in the Parent Company's accounts.

We would like to take this opportunity of expressing appreciа-n of the assistance we have always received from the Aus-alian Exchange Control Authorities in making arrangements from ne to time in regard to our overseas subsidiaries.

Taxation.

This company, along with other local manufacturers, and, in-ed, all taxpayers, received the news of the reduction in income xation with relief. Income taxation is still heavy, but the sub-ntial reduction announced in the recent Budget cannot fail to ve a beneficial effect as the large amounts drained away in xation in recent years have made it difficult to accumulate re-ves to meet less prosperous times.

It is my duty, however, to remind shareholders that, until broad problem of what has been aptly described as Capital osion is satisfactorily solved by the authorities, this company d others engaged in heavy industry will find themselves in an idious position.

In spite of the heavy expenditure since the war ended, a large rtion of our capital equipment still in use was built at pre-lation costs, and our annual charge for depreciation is normally sed on original cost only. Depreciation, after all, is only that rtion of the company's annual costs of production which re-sents the wastage of capital invested in plant which gradually ars out in the course of production of goods. It is quite ob-us that, where depreciation is calculated on original cost, the n recovered annually will never be sufficient to provide a fund the eventual replacement of such equipment at today's prices. y extra provision for depreciation which companies consider essary to meet this position is subjected to tax at full rates, d the result is that the capital resources of industry are being dually whittled away. This problem is not confined to Aus-lia, and a satisfactory solution is difficult to devise, but I feel e that, once the importance of the matter is generally recog-ed, a way will be found to slow down the rate of capital erosion hout unduly affecting the revenue.

Employees and Shareholders.

For the information of shareholders and the public generally I ive you the following statistics:

Average number of employees during the year ..	8,500
Total salaries and wages paid	£6,000,000
Number of shareholders	12,000
Total dividends paid	£742,000
Average payment to each shareholder	£62

Coming now to the operations of the Subsidiary Companies d ing the year, I will deal with the main matters of interest:

Glass Containers.

About thirty years ago practically all the glassware manu-ured in Australia consisted of bottles and jars. Since then, ever, the company has undertaken the manufacture of Pressed Blown Tableware, Lightingware, Window Glass, Glass Tubing Pyrexware. With the development of these commodities, and r avenues of production, the turnover of Australian Glass nufacturers Co. Pty. Ltd. now represents only about one-third the total turnover of the group.

Whilst the plants are not working to full capacity, trade has substantially recovered after having suffered reduced turnover during the early part of last year.

The new plant recently completed in Brisbane will satisfy the long-felt need of Queensland customers for adequate supplies of bottles. It is hoped the demand in that State will be maintained, thereby justifying the substantial capital cost of the project.

Post-war glass manufacturing costs have increased tremendously; however, we are pleased to say that, by continual efforts to improve efficiency, the company has been able to absorb much of this increase, although there is a very narrow margin between production costs and our selling price.

Sheet Glass.

During the past year the demand for this product has been maintained, and we have supplied a reasonable portion of the market's requirements. You were told by the Chairman last year that we were about to undertake complete rebuilding of the large furnace in Sydney. To avoid being too long out of production this work has to be carried out in two stages, the first of which has been completed, and the results have fully justified the cost involved.

Decorative Rolled Glass.

Production and sales continued very satisfactorily, the major portion of Australia's requirements being supplied by our factory. Decorative Rolled Glass is now being used extensively as home builders appreciate the advantage to be gained by admitting daylight whilst maintaining privacy.

Crown Crystal Glass Pty. Ltd.

Production and sales were less than in previous years, but, by the elimination of certain unprofitable lines, and the adoption of other economies, the profit position was maintained. Early this year we introduced to the market "Thermexa" Heat-resisting Opal Glass, which has proved an unqualified success, and has met a much needed domestic requirement for attractive durable Teacups, Saucers and Bowls at moderate prices.

During next year it is proposed to commence the manufacture of Opal Oven Pyrexware, which has proved so popular overseas.

Sales prospects, generally, for the current year are better, but, with the lifting of import restrictions on certain types of glassware, it is likely we will find it difficult to maintain the present rate of sales of the lines so affected.

Bernard-Smith (Pty.) Ltd.

The results of the year were satisfactory, bearing in mind conditions as they exist today. Amongst the work completed was the fabrication and erection of the Boiler House extension at Pyrmont Power House; a number of other large structural steel projects, and a series of storage tanks and pressure vessels for the Oil and Chemical industries throughout Australia, and also for the brewing trade.

As this company carries out heavy capital equipment construction and fabrication, it is intimately associated with future expansion in private industry and large undertakings by Governments.

A.C.I. Plastics Pty. Ltd.

Has taken some time to recover from the recession which occurred last year, but the position is gradually improving, and new lines are being developed. One interesting new product we are making is a Portable Warning Reflector for motor trucks. Such a device is now compulsory under the Victorian Motor Car Regulations. We have also installed plant, which is now in production, for the making of Polyethylene Film which is used substantially in the packaging field.

Laminex Pty. Ltd.

Rapid progress has been made during the past twelve months as a result of the completion of the first section of the new factory at Highett (Victoria), where a large new press, which is giving good results, is already operating. The installation of a still larger press from England is about to be commenced. This will be in production towards the end of the year, making Decorative Laminex Sheets measuring 12 ft. x 4 ft.

Production and sales have been satisfactory, and the efficiency will be still further improved when additional buildings, which have been approved by the Board, are erected at Highett for the impregnating plant and offices.

Glass Fibres (Aust.) Pty. Ltd.

The Chairman informed you last year that the company intended to commence the manufacture of Glass Fibre in Australia, and, whilst this has been delayed pending our obtaining the latest developments in overseas manufacturing technique, we are pleased to state the project is now under way.

Reports from overseas, particularly America, indicate the increasing demand for and use of Glass Fibre in all its forms. When this company commences production it is assured of a good future.

Hytest Axe & Tool Pty. Ltd.

There is a healthy demand for Hytest Forged Steel Axes, as experienced axemen recognise "Hytest" as a quality product, most suitable for use in all types of Australian timbers. Substantial successes were again achieved at the wood chopping contests at the various Royal Shows, particularly in Sydney and Adelaide.

We are now marketing an improved design 5-lb. axe with a wider cutting blade, the shape of which was designed in conjunction with Australia's leading axemen and timber-getters. It is proving most popular.

(Continued on next page)

AUSTRALIAN CONSOLIDATED INDUSTRIES (Contd.)—

New Zealand.

Auckland:

The less buoyant trading conditions in New Zealand had not seriously affected New Zealand Glass Manufacturers Co. Pty. Ltd. at the close of accounts, but our customers' requirements are so much reduced that at the present time the demand is not sufficient to permit efficient operation of the factory. However, there are now signs of recovery in the order position.

The Cardboard and Plastics factories operated satisfactorily throughout the year, and in the current year sales are being maintained.

Christchurch:

This factory commenced to manufacture Glass Containers, Pressed Ware and Domestic Lightingware before the close of the last financial year, but, due partly to the short time it has been working, and partly to trading conditions in New Zealand, we have not yet obtained the results for which we hoped. The Management is giving close attention to improving the situation, and we anticipate by this time next year to be able to report that the industry is producing on a profitable basis.

Laminex:

The Decorative Board Plant commenced last July, and its products are being well received by the local trade.

Singapore.

The Glass Container, Corrugated Cardboard and Ceramic Labelling Plants again worked well throughout the year, although not so profitably as in previous periods. All Malaya has suffe somewhat from the effects of the fall in the price of rubber tin in recent months.

Appropriate action to meet the changed conditions has b taken, and indications are that the company should show sa factory results during the current year.

Bangkok.

This factory commenced to produce Glass Containers early the year. It is suffering from "teething" troubles that are ge ally evident in the establishment of a new industry, particul glass.

Our Managing Director and a Chief Executive officer visited and spent some time in Bangkok a few weeks ago con that there is sufficient business to enable this subsidiary to rate profitably, the Thai Government having now given a meas of tariff protection to the local industry. Training local perso is responsible for most of the difficulties that have been exp enced, but this will be overcome in the course of time. Actio effect general improvements has been taken, with the result more satisfactory operation has already been achieved.

Indonesia.

For some time your Board has been considering the estab ment of a Glass Works in Indonesia. Our Managing Director, ing his recent visit to the East, further investigated the po bility of commencing the manufacture of Glass Containers in donesia. At the present time the only glass factories there very inadequate. With a population of 80,000,000, the Board siders a modern plant is justified, and negotiations to this end proceeding with the Indonesian authorities.

Australian Distillery Co. Ltd.

Holding Company in United Distillers Pty. Ltd.

Reg. Office: 395 Collins St., Melb. **'Phone:** MB 1624. **Directors:** H. E. Thonemann (Chairman), Dr. S. Fraser, G. W. Watson. **Auditor:** J. A. Lawson.

41st Year ended July 31, 1953. Meeting September 29, 1953.

The shareholding in United Distillers Pty. Ltd. provides the main source of revenue. Sales of the company were halved as a result of increased excise; however, excise rates were reduced in the recent Budget.

The following remarks were made by the Acting Chairman, Dr. S. Fraser, at the Annual Meeting on September 29:

In the absence of our Chairman of Directors (Mr. Thonemann), who is abroad, it is my privilege to address you today.

You will have noticed, perhaps with some dismay, that your dividend has been reduced from 7½% to 3%. As you know ours is a holding company whose main interests are in the Distilling Industry—an industry peculiarly subject to high and even crippling taxation.

The consolidated profit of the United Distillers for the year ended March 31, 1953, was one-fifth of that for the previous year—a result largely due to the crippling effect of high taxati various guises—double company tax, excise and sales tax.

As the brewing industry has caught up with demand has been an enormous drop in the sales of spirits. Let m phasise again that the great increase in the price of our pr over the last fifteen years is very largely due to high taxat

Even Governments largely obsessed with the idea of in ing their income rather than decreasing their expenditure realise that eventually they too are subject to the economic of diminishing returns.

As anticipated in the annual directors' report, there has some reduction in the excise, and it is hoped that this will in degree assist the sales of the products in which we are inter

The following address was given by the Chairman, Sir T. colm Ritchie, to shareholders, at the Annual Meeting on Octo- 8:

In the course of my address to you last year, I outlined the rlying motives of the amalgamation of Polson Motor Parts Co. Ltd., and Blaxland Rae Pty. Ltd. through this Holding Com- y, and I indicated some of the things we hoped to achieve by amalgamation of interests and forces.

Progress of Amalgamation.

At this, our Second Annual Meeting, I am happy to tell you that welding together of the two Manufacturing Companies has suc- ed beyond our most optimistic expectations, and both subsidiaries functioning as A.C.L. units without any reservations arising out he traditional loyalties to their previous employers and their ective arrangements.

The strength generated within our Group by this singleness of ose cannot be over-estimated, and I pay tribute to the Direc- the Managements and Staffs of our subsidiaries for their un- tting endeavours to give complete and unreserved co-operation e directives of the Holding Company. In my experience, I know o amalgamation which has proceeded as smoothly as this one.

indicated in my previous address that rationalisation of manu- ure, with the consequential opportunity of specialisation, would ne of our main objectives. During the year we have made con- able progress in this regard. Duplication of manufacture has eliminated; a clear programme of progressive developments been adopted, and in order to provide for some of these develop- s, a ground area of 8½ acres has been secured contiguous to area at present occupied by the Polson Motor Parts Company at brook. This area will adequately provide for future expansion nany years to come and a plan of development has been worked which will ensure that successive buildings will fit in as part of ordinated whole. Over the years, the costs of successive factory ganisations can become quite an important item in the overall nses. By the acquisition of this land and the adoption of the lopment plan, we will avoid all that.

Certain factory extensions are already under way and the special plant which was ordered last year will begin to arrive within next three months.

The additional space provided by the buildings at present under ruction and the installation of the new plant will increase our uction capacity and will make a material contribution to de- ing our costs.

Extensions to our range of products within the Automotive Parts rip were developed on a pilot scale during the year and with the al of the new plant referred to, we will commence full-scale uction.

Sales and Profit.

Our sales for the year, when considered in the light of all the conditions obtaining, were well maintained, and although their volume did not achieve the figures of the previous year, the gross profit rate was maintained and we were able to extend the range of our merchandise stock of completed parts and thus render better service to our customers.

The profit resulting from our trading showed a decrease of £26,438 on the result achieved for the previous year, but after providing for income tax on the new rates, the decrease in net profit carried to Appropriation Account at £74,960 was only £17,258. This result, in the face of the conditions then prevailing in the motor trade throughout Australia we regard as highly satisfactory, and, it should be noted, is two and a half times the £30,000 required for the payment of the dividend declared for the year. After providing for this dividend, and writing off the whole of the Preliminary Expenses £2,991, the balance carried forward to the credit of Profit and Loss Account is £85,282.

It should also be noted that the taxed profit of a subsidiary, amounting to £22,100, has been transferred to the Holding Company and is available for future tax-free dividends.

Depreciation, additional to the rates normally applied, to the extent of £10,000, has been provided by an appropriation from the profits of the subsidiary companies.

Stocks on hand, whilst showing an increase for the year of £65,552, have been conservatively valued, and this increase is the direct result of our policy to maintain a complete range of merchandise stock at our various sales depots available for immediate delivery to our customers.

New Issue.

To finance the land, buildings, plant and extensions to our range of products, previously referred to, your Directors decided to increase the subscribed capital of the Company to £400,000 by the issue of 400,000 ordinary shares at par. These shares will, immediately after issue, be converted to stock units. Full details of this new issue have already been advised to you and your Directors have no doubts that the issue will be fully taken up.

We believe this new capital will increase our profit-earning capacity when the developments, at present well advanced, are completed.

The Future.

The results of trading by our subsidiaries this year to date encourage us to believe that there is a definite improvement in the Automotive Trade and there is every indication that this improvement will be maintained. We are well organised to secure our share and the outlook is distinctly brighter than at the corresponding period last year.

Ball & Welch Limited

Retailers, Drapers, &c.

Reg. Office: 180 Flinders St., Melb. **'Phone:** C. 9070. **Directors:** Hon. Sir Norman A. Martin (Chairman), L. H. Galloway (Managing), I. B. Henderson, L. A. Mellor, L. G. Patterson, J. E. Quayle, T. Rose. **Auditors:** Wilson, Danby & Giddy.

72nd Year ended July 31, 1953. Meeting September 23, 1953.

Although trading was hesitant early in the year, conditions later improved, and total turnover was only slightly less than last year.

Gross earnings were lower, but reduced expenses and depreciation resulted in a profit of £85,847 prior to tax — an increase of £9,837. After the usual 10% dividend total reserves rose by £14,387 to £308,540, which represents £1/2/- for each £1 share.

	1953.	1952.	1951.	1950.

Reserves and undiv. profits*	**277,600**	266,676	259,300	241,146

*Excluding superannuation reserve (1953, £27,940), deferred repairs and renewals reserve (£3,000); include profit on sale of fixed assets, £741 in 1952.

Liquidity improved during the year, as indicated by the conversion of last year's overdraft of £26,870 to a credit balance of £41,799 and a reduction of stock by £50,519. Stock turnover was faster than for some years.

Current assets exceed liabilities by more than £400,000.

Latest—33/6; yield, £5/19/5 per cent.

In his address to shareholders at the Annual Meeting held on September 23, the Chairman, Hon. Sir Norman A. Martin, made the following remarks:—

At the outset of this, my report, I would like to pay a tribute of loyalty and affection to Her Most Gracious Majesty Queen Elizabeth the Second. During my sojourn in the United Kingdom I had the privilege of meeting the Queen on many occasions, and was immediately impressed with her high sense of duty and by her graciousness at all times. I am sure I speak for you all, when I say that I do earnestly hope that Her Majesty may be long spared to reign over us, that her reign may be even more happy than that of her most illustrous and beloved Father, and that the Nations of the World, in her reign, shall be united together by the bonds of Peace. We look forward with joyful anticipation to the visit of Her Majesty, and of His Royal Highness the Duke of Edinburgh, to Melbourne.

Trading.

During the year under review, trading conditions have not been easy. We have experienced a levelling off from the buoyant years that followed the War. In the early part of the year some hesitancy was noticeable in trading generally, but in the latter months conditions became more buoyant, culminating in record sales figures being established for our Winter Sale month, so that over the whole year sales were only slightly behind those of the previous year.

With the discontinuance of most price control margins in August last year, public confidence in values returned. Keen competition in trading did not allow for any appreciable increase in price margins. At the same time the company was able to enjoy greater flexibility to meet the changing conditions of trade, which were to the advantage of the buying public; but it was regretted that the State Government re-introduced controls on certain goods in May last.

The margin of gross profit earned by the company over the year has been satisfactory, and slightly higher than the percentage margin earned last year.

Stringent control of expenses resulted in a considerable saving being effected. Labour wastage had the close attention of Management throughout the year and, as a result, staff efficiency has improved. The cost-of-living increases granted during the year, indicate that rising costs in some spheres were not fully arrested.

Operating Results.

Final Net Profit for the year shows at £42,924 against £38,376 for last year, and the recommendations of the Board, as set out in the Directors' Report, are for a total appropriation of £42,000, £28,000 for Dividend purposes (of which £11,200 has already been paid), and £14,000 to Reserves, leaving £924 to add to the Carry Forward.

As indicated in the Report of the Directors, the Reserves of the Company have been further strengthened this year, and now stand at £308,540, an increase of £14,387 over the total Reserves held last year. Shareholders will realise the very great necessity of adding to the Company's Reserves each year, in order to provide for future expansion on the one hand, and for the wastage of existing Assets on the other.

I am very pleased to announce to shareholders that durin current financial year a completely new floor, previously occ by Workrooms, Lay-by and Despatch Departments, will be c for additional Merchandising Sections.

Before asking you to adopt the company's Financial State now before you, there are several items in the Accounts tha worthy of note, on which I will briefly comment:—

Finance.

It is gratifying to be able to report the strong financial po of the company today. Last year the company's overdraft £27,868, whereas this year the accounts show a credit balan the bank of £40,679. It is interesting to note that the percenta cash trade in relation to total turnover improved for the year the corresponding percentage for last year, notwithstanding a stantial increase in total debtors' balances, but which is more accounted for by a large expansion in hire purchase sales, and the company has been able to finance fully from its own resour

Stock.

Stock at balance date shows a reduction of £50,519, further strengthens the already satisfactory liquid position. F year under review, there has been an improvement in our liquid tion of £20,450.

Turnover of stock has been most satisfactory. Shareh will be pleased to know that we have turned over our stock a g number of times than has been achieved by the company number of years.

Supplies from Australian manufacturers have been ad and readily available, but import restrictions still limit the a depleted stock of overseas goods sold by the company. At the time, I think we all realise, that the economy of the nation ha greatly helped by the import restrictions imposed over the l months.

Fixed Assets.

Freehold land and buildings, and plant and fixtures, sh slightly less in total in the accounts this year, due to the w off of substantial depreciation. In view of the current cost placing buildings, plant, fixtures and fittings, I do feel that the able depreciation rates for taxation purposes, should be more l On the other hand, the reduction in company tax announced Budget, will materially help those financial resources which industry to expand.

Australia today has a tremendous potential for expans industry, both primary and secondary; an increasing popu makes expansion in the trades of supply and distribution ess We look forward to another buoyant year, and I feel that our n specialty store, near St. Paul's, has much to commend itself to our shareholders and to the public generally.

Staff.

I have much pleasure in placing on record my appreciat the splendid work done by Management, Executives and S the company, who, by their efficiency and loyalty throughout th have enabled us to maintain a high standard of service to ou tomers.

"Viewed on a broad canvas, there are grounds for anticipating progressively better share markets and prices in the coming months. Consequently, a more vigorous policy of investment in good stocks appears to be justified on either a short or a long-term view," said the Chairman, Mr. Staniforth Ricketson, at the Annual Meeting of shareholders held on October 26. His address reads:

It is the sad duty of the Directors to place on record the loss of a most valued colleague and beloved friend in the person of Sir George Dalziel Kelly, who had been a Director of the company since inception. Sir Dalziel was a Director of each of the other investments companies in the Capel Court Group, having joined the boards of the four oldest companies in September, 1938, subsequently becoming a Director of each of the newer companies as formed. During his association with the group, he made splendid contributions to the development of the various companies and to their prestige, just as he did in the many other spheres in which he was known as a man of outstanding ability and integrity.

To fill the vacancy caused by the demise of Sir Dalziel Kelly, Colonel F. H. Wright, O.B.E., V.D., accepted an invitation to join the Board of this and the other companies. Mr. E. Aston Lloyd was appointed to act as Alternate Director for Colonel Spowers, and Mr. R. S. Clayton was appointed as an Alternate Director for myself.

ACCOUNTS OF THE COMPANY

Paid-up Capital of the company has remained unchanged at £100,000 in 400,000 stock units of 5/- each since incorporation in 1950. When conditions become favourable for an increase in capital the Directors will follow the same principle as that observed in regard to the other companies in the Capel Court Group, and will offer such issues to shareholders at par in proportion to their holdings.

RESERVES AND UNDIVIDED PROFITS

Owing to the short life of the company, and the unfavourable economic conditions existing up till very recently, it has not as yet been possible to build up substantial reserves and undivided profits. However, during the past three years, a general reserve, now totalling £5,000, has been established by yearly appropriations from earnings, and this, with £1,848, representing the carry forward in Revenue Appropriation Account, and £2,208 in the Investment Fluctuation Reserve, has brought reserves and undivided profits to £9,056. In the meantime, also, we have been able to write off from earnings Preliminary Expenses, amounting to £3,331.

OUTSIDE LIABILITIES

One method of augmenting the income-earning capacity of the shareholders' capital is by means of the retention of profits from year to year. Another is by the discriminating use of outside funds, which, however, is subject to the limitations posed under the Investment Company sections of the Victo Companies Act. As at 31st July, 1953, the total of cur Liabilities and Provisions was £27,086, as against £24,46 the corresponding date last year.

The principal change in liabilities during the year was increase of £2,495 in Bank Overdrafts to £22,136. The rem ing items are relatively small, comprising: Provision for I dend (unchanged), £4,000; Provision for Taxation, £607; Sur Creditors, £254, and Securities Bought but not delivered at balance date, £89.

INVESTMENT PORTFOLIO

Practically the whole of the funds employed at the bala date was represented by Investments, at cost, £136,008, c prising 137 different holdings. Of the total value, 93.7 per c was in ordinary stocks and the balance of 6.3 per cent. in ference shares. As you will all know, although the sl market showed some tendency towards recovery in the half of 1953, values are still considerably below those w existed two years ago. As a result, market value of the c pany's portfolio at 31st July last was £17,137, or 12.6 per lower than actual cost.

However, investment companies like your own are desig as permanent entities, and undue importance should not be tached to the valuation of the portfolio at any particular Fewer new issues were available during the year, but the pany acquired by purchase or allotment 4,084 shares, £2 of registered unsecured notes, and 2,705 share options i different companies, plus 1,326 bonus stock units of 5/- eac

REVENUE AND EXPENDITURE

After deducting interest paid, total income for the ended 31st July, 1953, amounted to £7,457, as compared £9,600 in the previous year. Of the total, £652 was der from underwriting commissions and the balance from divid and interest. In the latter connection, it is well to bea mind that the effects of an adverse or favourable year trade and industry generally may not be reflected immedi in the accounts of an investment company. That is bec final dividends declared in respect of a particular year company in which shares are held are frequently not distrib until after the investment company's accounts for that have closed.

Through the existence of a Central Secretariat, w handles the administrative affairs of the eight companie the Capel Court Group, management expenses are mode In the year just closed, they amounted to £843, as comp with £963 in the previous year. Provision for Taxation wa duced by £100 to £300, whilst the other items of expenses

prised: Audit Fees, £120; Directors' Fees, £100; and Rent, Salaries, Office and General Expenses, £323.

Net Revenue for the year amounted to £6,614, or 6.6 per cent. on paid-up capital, as compared with £8,637, or 8.6 per cent., in 1952. After providing for a 4 per cent. dividend (unchanged), requiring £4,000, writing off the balance of Preliminary Expenses (£1,000) and transferring £1,000 to General Reserve, £614 of the year's net earnings remained to be added to the carry forward in Revenue Appropriation Account.

SUB-UNDERWRITING TRANSACTIONS

As shown amongst the many informative tables appended to the Directors' Report, the company participated in sub-underwriting transactions in respect of 41,250 shares with a value of £26,104 in four companies and £25,000 of registered unsecured notes in two other companies. As a result of these transactions, we were required to take up only 386 shares and £540 of registered unsecured notes involving a total of £641. This was somewhat less than the underwriting commissions received, illustrating the conservative policy followed by the Board in accepting underwriting risks.

SURVEY OF ECONOMIC CONDITIONS

Confidence in the investment outlook should be materially enhanced by the resounding success of the Commonwealth loan which closed on 17th instant. Preliminary official figures indicated that the new money loan, for which a minimum of £50 million was sought, attracted subscriptions totalling £65.8 million.

This represents a further gratifying addition to the list of more favourable factors which have emerged during the last few months, and should help to consolidate the growing belief that Australia is entering a period of somewhat greater economic and financial stability. Indeed, it appears fair to say that the position today is more encouraging than it has been for two years or more. Blessed with another excellent season, promising high levels of primary production following last year's record output in many fields, and with a strong upturn in trading and industrial activity, Australia appears, temporarily at least, to have put behind her the period of acute economic difficulty which developed after the collapse of the wool market in 1951-52. The outlook has been materially improved by the substantial tax and other concessions announced in the Budget speech, the effects of which should become progressively manifest over the next few months.

Nevertheless, it would be unwise to allow the more favourable surface indications to obscure the seriousness of the economic problems with which Australia is confronted. The dominant one remains that of Australia's high cost structure, which assumes particular significance in the light of the much keener overseas competition which local manufacturers will be called upon to face owing to the progressive relaxation of the import cuts.

Some further comments on these important aspects will be offered at a later stage in this address, but before doing so, I feel it appropriate to deal in some detail with the loan-raising programmes for governments and semi-governmental authorities, which have a profound effect on the course of economic affairs in Australia.

Government Loan Programmes

Although the total approved by the Commonwealth for the States in respect of loan raisings for 1953-54 is only slightly higher than for the previous year, it now seems certain that the demands to be made on the public loan market for the current financial year will be considerably greater than in 1952-53. In the latter year, the Commonwealth agreed to a maximum of £190 million of loan moneys, mainly for the States. It also made it clear that the maximum it was prepared to provide from Commonwealth sources, over and above the amount raised in the public market, would be £135 million. During that year, the two Commonwealth loans issued resulted in total subscriptions of £99 million in respect of the £97 million sought. Of this amount, £36 million represented conversions of maturing loans and £63 million new cash.

After paying out non-converters, a net amount of £52 million in new cash remained towards meeting the needs of the States, and this was further increased to £59 million by "domestic" loan raisings by the States, totalling £7 million. The Commonwealth was, therefore, required to provide a net amount of £131 million to implement its guarantee. That sum was found in the form of a loan of £8 million from the Commonwealth Bank and a "special" loan of £123 million from Commonwealth sources. Subscriptions to the latter comprised investment of the Australian currency proceeds of dollar loans from the International Bank (£18.5 million), and of Commonwealth Trust Fund moneys (£104.5 million).

Requirements for 1953-54

For 1953-54, the Commonwealth Government has approved a total of £200 million for the States, an increase of £10 million on the amount provided last year. The Commonwealth Treasurer indicated that it was expected that £105 million would be available from new money loan raising in the public market. He further said that the amount to be provided from internal Commonwealth sources would be limited to £95 million, to be reduced by any sum by which public borrowings exceeded £105 million.

With £65.8 million of new money already in hand (assuming none is required to pay out non-converters in maturing loans) as a result of the recent successful loan operation, this would mean that a further sum of £39.2 million would be required from the public market to reach the minimum target of £105 million specified by the Treasurer. However, in view of the splendid response to the recent issue, the Commonwealth may be encouraged to seek an even larger sum from the public market during the balance of the current financial year, and thus reduce its liability in respect of the amount to be provided from Commonwealth sources.

Total Commonwealth loans falling due for redemption or conversion in 1953-54 require £45 million. Side by side with the recent new money loan of £50 million, the Commonwealth launched a separate conversion offer, on identical terms, for an amount of £33 million, so that conversion requirements for the balance of the financial year have now been reduced to the manageable sum of £12 million. Last year total requirements for cash and conversion purposes were £97 million; this year, on the basis of £105 million of new money, plus £45 million for conversions, the minimum total of Commonwealth loan raisings will be £150 million.

Issues of Treasury Bills

When the details of the Commonwealth's guarantee for 1952-53 were announced, it appeared to be a reasonable assumption that a further substantial increase in inflationary Treasury Bill finance up to an amount of £135 million would be required. However, through internal arrangements for the provision of the deficiency (ultimately shown to be £131 million) between net new money loan raisings and the total guarantee, the actual increase in public issues of Treasury Bills as at 30th June, 1953, was limited to £72 million. This apparently was achieved by the diversion of Commonwealth Trust Fund moneys to investment in the special loan provided by the Commonwealth for State purposes.

That assumption appears to be borne out by a study of the Budget Tables, which show that, whereas the "public" issue of Treasury Bills increased by £72 million in 1952-53, "internal" issues of Treasury Bills, representing investment of Commonwealth Trust Fund balances, fell by £76 million. The comparison of total Treasury Bills on issue at the end of the last two financial years is as follows:——

£'s Million.	30th June, 1952	30th June, 1953	Increase or Decrease
Internal Treasury Bills	252	176	—76
Public Issues	153	225	+72
Total	405	401	— 4

At 30th June, 1953, the internal issues of Treasury Bills were made up of £185 million, representing the investment of the balance at credit of the National Welfare Fund, and £67 million of other Trust Fund balances. In 1953-54, however, the whole of the £176 million of internal Treasury Bills related to the National Welfare Fund, which held also £10.5 million of Commonwealth Government Inscribed Stock.

(Continued on next page)

BRENTON INVESTMENTS (AUSTRALIA) LTD. (Contd.)—

Since June, 1951, the total of the public issues of Treasury Bills has been increased from £108 million to £225 million, thus giving an impetus to the depreciation of the currency in terms of purchasing power and, therefore, to the intensification of inflationary forces. The fact that the increase in 1952-53 was much smaller than had been anticipated furnishes encouraging evidence of the Government's desire to restrict the use of central bank credit.

In his Budget Speech for 1953-54, Sir Arthur Fadden indicated that it may be necessary to use additional central bank credit, but added that the amount required was expected to be less than in 1952-53. If, as now seems possible, the public loan market yields more than the £105 million forecast for the current financial year, the authorities may be able to show a much better result in this regard, thus making a definite contribution to the curbing of inflationary pressures.

Semi-Governmental Programme

Whilst the Commonwealth and States are seeking a greater amount from the loan market in the current financial year, the demands of the semi-governmental and local authorities are more moderate than they were in 1952-53. For 1952-53, the total approved under the Loan Council "Gentlemen's Agreement" was £128 million. According to the latest report of the Commonwealth Bank, however, the amount of new money actually raised by these public bodies was around £90 million, as compared with some £65 million in 1951-52. This year, the approved total has been reduced by £38 million to £90 million, which, as will be seen, is in line with the amount actually raised during the last financial year.

Nevertheless, the calls made on the market since 30th June have already been substantial, and further loans for public bodies will follow each other in quick succession in the market for the balance of the year. In addition, a substantial amount has been provided for these authorities in the form of private loans. During the coming months, it appears probable that public bodies will experience increasingly severe competition, not only from Commonwealth loans, but also from issues of debentures, registered unsecured notes, and shares offered by public companies, particularly if, as expected, official control of capital issues ceases to operate with the expiry of the Defence Transition Act on 31st December next.

Success of Commonwealth Loan

During the past few months, quite a transformation has come over the loan market, and the unqualified success of the recent Commonwealth loan will serve to consolidate the belief which has been gathering strength for some time that stability of interest rates was approaching, and had, indeed, been achieved in the case of Commonwealth loans. The authorities displayed wisdom and realism in preserving the 4½ per cent. longer-term rate (13 years), with a short-term rate of 3 per cent. for slightly over two years, for the recent issue, and the success attained may, in the course of the next few months, have far-reaching effects.

It took the investing public quite some time to realise that a longer-term rate of 4½ per cent. for Australia's prime gilt-edged security was a really good rate — particularly in view of the benefits conferred by the rebate of 2/- in the £ Commonwealth income tax on the interest from Commonwealth loans. It is, in fact, the best rate which has been offered for a new Commonwealth issue since the Great Conversion in 1931, and, in view of the recent success, it may well prove to be the best rate which is likely to be offered for some years to come.

Since the new loan has been quoted on the Stock Exchange buyers have been offering a small premium, and it appears probable that a much greater premium will be available as time goes on, thus giving investors an experience which has not come their way for some years. If the recent strength of the Commonwealth loans market is maintained, with the growing support of the public generally which has recently been manifest, the authorities may feel justified in reducing the rate for the next Commonwealth loan below the level of 4½ per cent., which has been the rate since it was increased from 3¾ per cent. in November, 1952.

Support for this view may be found in the fact that the average redemption yield available in the market from all the Commonwealth Government issues, except the 2 per cents. a 3 per cents., has been running around £4/5/8 per cent., against £4/10/2 per cent. at the same time last year. In Se tember and October, 1952, the percentage of public purcha of Commonwealth loans on The Stock Exchange of Melbou averaged about 38 to 41 per cent.; during the correspondi period this year the proportion taken by the public in t market has risen at times to around 70 per cent., thus furni ing a more genuine public assessment of the rate.

As a result of the recent cash and conversion operations total of £94.3 million was obtained (£65.8 million in new ca and £28.5 million in conversions). This was only about million less than cash and conversion loan subscriptions for t whole of 1952-53, and it constitutes one of the greatest succes achieved by the Commonwealth since it issued its first inter loan in 1915.

Whilst some improvement has been manifest in the mar for public body loans and in the response to new issues, it h not been so marked as with Commonwealth loans. Howev the belief that future Commonwealth loans are likely to of a lower coupon rate is encouraging investors to support pub body issues at 4¾ per cent. on the assumption that in this fi also some reduction in rates may occur in the not far dist future.

Better Trading Conditions

Earlier in this address reference was made to the impro economic conditions which had developed during the last f months. These have been reflected in a variety of ways, nota the increasing buoyancy of retail trade. Latest official figu show that the improvement in this regard has continued in opening months of the 1953-54 financial year, and August sa in Melbourne were 12.7 per cent. greater, and in Sydney per cent. greater, than those recorded in the correspondi month last year. Moreover, reports from different sections trade and industry also indicate much increased activity an more optimistic outlook generally.

During recent months, numerous balance sheets issued h disclosed quite an appreciable recovery in profits and divide from the lower levels touched last year. Consequently, reports of brighter trading conditions encourage hopes for s better balance sheets in the current year of operation. In t respect the position will be still further improved by the s stantial Budget cuts, which have already been reflected in creases of profits, due to reduced tax provisions for 1952-53 many companies. The average reduction of 22 per cent. public company tax rates is resulting in quite an apprecia increase in net earnings. In the same way the substantial ductions in sales tax rates have enabled traders to make pr cuts, thus stimulating the free flow of trade.

Looking back to the position existing at this time last ye one cannot help being impressed by the materially better o look now presented. In broad terms, the favourable fact far outweigh those of an unfavourable character. Official turns indicate a much better overseas trade balance. For t first three months of the 1953-54 year, merchandise expo totalled £191.7 million as compared with £156.5 million for Ju September, 1952, whilst, despite substantially increased imp quotas, imports for the first three months of 1953-54 rose o to £157.9 million as compared with £132.6 million in the cor sponding period of 1952-53. As a result, the first quarter h given a favourable trade balance of £33.8 million, which £10 million greater than that recorded in the first quar of the previous financial year.

Encouraging Wool Position

As yet, the increased clearances and higher prices for w have been reflected only to a moderate degree in the exp figures, but, if present conditions are maintained, wool sho make an even greater contribution to Australia's export inco than it did last year. Figures released by the Natio Council of Wool-Selling Brokers of Australia show that to 3 September, total sales amounted to 527,481 bales, which w 61,503 bales more than had been sold at the correspondi stage of the 1952-53 selling season. Furthermore, the avera price realised for greasy wool so far this year has been 81 pence per lb., representing an appreciable increase over t average of 72.21 pence per lb. realised in the equivalent per last year. Further evidence of the improvement which h

taken place is supplied by the fact that, whereas super 64's, high-grade combing wools, were selling around 153 pence per lb. at the end of September, 1952, the current level is around 186 pence per lb.

For the full 1952-53 selling season, Australia sold 3,888,753 bales of wool, the average price realised for greasy wool being 81.80 pence per lb. and total receipts £404 million. The clip for the current season is expected to be at least 100,000 bales more, and, if prices follow the anticipated course, the wool cheque may well be in the vicinity of £450 million. This would make it the second best season in Australia's history, with total receipts some £86 million below the all-time record established in the boom period of 1950-51.

Up till the present stage, the wool market has been firm and active, with good competition from Continental and Japanese buyers and some purchases by America. Well-informed sources anticipate a continuance of these conditions, though a clearer view of the trend will not be possible until late November or early December when a greater proportion of the finer merino wools has been sold.

Good Season Promises High Production.

With another splendid season, other primary products, many of which last season reached record output, appear likely to make handsome contributions to Australia's export income. Some uncertainty, however, exists in regard to wheat, the outlook for which has been clouded by the United Kingdom's refusal to be a party to the renewed International Wheat Agreement. This will result in throwing a larger proportion of the world's wheat on the open market. Concern on this score is accentuated by the large surpluses existing in America and Canada. In the local sphere, some State Labor Governments showed great reluctance to agree to the Commonwealth's wheat stabilisation plan, but this difficulty has now been resolved, though the guaranteed home market price will be somewhat below the level originally proposed.

As a result of the Armistice in Korea, base metal prices have shown considerable fluctuation and will be much lower than last year, though still, it would appear, at profitable levels.

Influence of Overseas Factors.

The favourable factors enumerated are largely of a local character, and it would be unwise to ignore overseas conditions, which inevitably have a profound influence on Australia's economy. During the last few months, many conflicting reports have been received regarding the economic outlook in the United States of America, engendered by fears as to the effects of the Armistice in Korea, and, particularly, by the severe falling off in automobile sales. Concern on these scores resulted in the Dow Jones Industrial Share Index falling from the 1953 peak of 293.79 in January to a "low" for the year of 255.49 in the middle of September. However, since then, with reassuring reports from economic authorities and the belief held in many quarters in America that the Eisenhower Administration would use its great powers to stem any threatened recession, confidence has been growing, and the Dow Jones Index has now risen to around 273, which is higher than at this stage a year ago.

In this connection, I feel that you may be interested in some first-hand impressions of the American situation contained in a letter from New York received from our colleague and Alternate Director, Mr. R. S. Clayton, during his stay there. Writing under date, October 11, 1953, Mr. Clayton said:

> The more I see of the American economy, the more I feel that there is a real danger of a fairly sharp recession. The future depends upon the volume of business because wages and costs are high, and only by using mass production and very costly equipment can they keep selling prices of goods within bounds. The high yields in this market indicate that they are not too confident of their ability to stave off a decline in demand in the home market. . . . There is a general expression of opinion that the Republican Government will see them through without a serious depression. They are rather complacent about it, but there is danger in leaving the job to the government if that means failure on the part of trade and industry to take corrective steps themselves.

U.K. and U.S.A. Compared.

In an article quoted in the Melbourne "Age" of October 20, 1953, from the "Economist," London, pointed attention is drawn to the radically different atmosphere existing in the United Kingdom by comparison with the United States. In that article, it is pointed out that the London Stock Exchange has recently shown astonishing strength, based on record retail sales, greater activity in industry, the improved position of international payments and the recent fall in the bank rate. The new optimism existing in the United Kingdom, it is stated, has been reflected in a rise in the industrial share price index from 115.8 to 127.7 since the beginning of the year, higher company profits and dividends and a growing belief amongst industrialists that the new prosperity has reasonable prospects of continuity.

In regard to America, on the other hand, the article explains that, though Wall Street has shown some recovery, the situation still reveals "far more apprehension about the future" than seems to be indicated by the behaviour of the London Stock Exchange. Nevertheless, the statistics issued by the U.S. Commerce Department show that, in the matter of retail sales, the United States has enjoyed its best summer in history and that, during the autumn, consumer demand is being maintained at a level higher than last year. It is further pointed out that the American economy expects to benefit before long from considerable alleviation of the tax burden, that interest rates are falling and that the monetary authorities are showing signs of easing credit. Moreover, both Federal and State authorities have impressive programmes of public works, road development, etc., ready to put into effect as money becomes reasonably cheap and abundant.

Whilst Wall Street and every other segment of the United States economy have always tended to behave in a more volatile manner than does their more sedate counterparts in London, recent happenings in America are not without significance. Consequently, the situation there should be watched closely in Australia, whose economy is inextricably interwoven with those of the United Kingdom and the United States of America.

Menace of High Costs.

On the home front, there are a number of aspects which provide justifiable reasons for concern as to the future. The greatest of these is, of course, the perennial one of high costs, for which there is no quick or easy solution. The Arbitration Court's suspension of automatic quarterly cost-of-living adjustments to the basic wage has not given any reassurance in this respect, and the Commonwealth Statistician's cost-of-living figures for the first quarter of 1953-54, recently released, show that prices have continued to appreciate. If those figures were still generally applied to adjust the basic wage, they would have resulted in an increase in the rates for capital cities ranging from 2/ per week in Melbourne and Adelaide to 10/ a week in Hobart. Despite the Arbitration Court's decision, employees operating under 123 wages boards outside the Court's jurisdiction will be entitled to the increase.

The question of costs is of particular importance in the light of the progressive increases in import quotas which are being conceded by the Commonwealth Government. Substantial increases in import quotas have been given since the beginning of 1953—in April, July and October—and a further revision has been promised early in the New Year. This can only mean that local manufacturers will be submitted to increasingly strong competition from imports.

In particular, Germany and Japan, both low-cost producers, have re-established their industrial production and their competition in overseas markets, and their manufactured goods are flowing into Australia. The problem of competition with imports will undoubtedly become more acute as time goes on, particularly if there should prove to be any substance in reports from certain quarters that the Commonwealth Government, early next year, may be forced to eliminate altogether the import cuts imposed in March, 1952, after the Australian market had been flooded with goods from overseas.

A Timely Warning.

The Australian Tariff Board has issued a timely and emphatic warning to industry that tariff protection must not be

(Continued on next page)

BRENTON INVESTMENTS (AUSTRALIA) LTD. (Contd.)—

regarded as the first line of defence against overseas competition. In a masterly exposition of the factors responsible for Australia's high cost structure, the Board, in its annual report, says that the significance of the tariff as the last barrier to increased costs becomes clearer as costs approach the danger level and as pressures for raising the level of the barrier increase. This approach to the danger line, it states, raises the question whether there is not a need for greater economic co-ordination in Australia.

Supporting this contention, pointed attention is drawn in the report to the fact that numerous Commonwealth and State industrial tribunals are continually reviewing wages and conditions of employment. This, with other factors, results in additional burdens being constantly imposed on local industry. Some of those listed are high penalty rates for week-end and holiday work, unwillingness of some unions to permit continuous production, industrial disputes and stoppages and the introduction and proposed extension of long-service leave.

The Board rightly says that a small reduction in all the elements in the price of commodities is all that is needed to reverse current tendencies and to create a stable basis for further effort. It advocates a greater return in work value for wages, a more cautious view of investment in expansion and new proposals, a prudent elimination of questionable overheads, a more concentrated effort by management and reduced profit targets.

Through the evidence placed before it at frequent sittings, the Board is in a unique position to assess the factors affecting the future of industry in Australia. It is most encouraging, therefore, to learn that such an authoritative body is manifesting a high sense of public duty in carrying out its important functions.

Investors Still Cautious.

These and other factors have combined to preserve a cautious tone in share dealings on the Stock Exchanges, despite the splendid season, favourable trade balance, a buoyant wool market, large gold and balances held abroad (now £486.7 million as compared with £296 million in early October, 1952), high bank liquidity, generally better trading and more attractive balance sheets. In pre-war days, such an assembly of favourable factors would have been reflected immediately in the prices of industrial shares. In this regard, also, appreciable Budget tax and other concessions would have stimulated much greater activity in the share market, whilst the greater stability of interest rates would have encouraged buying in the belief that returns from ordinary shares relative to gilt-edged rates would become more attractive.

Investors, however, have not responded to any marked extent, and the general level of share prices is now somewhat lower than it was immediately after the Budget speech. In these circumstances, it is apparent that investors are carefully weighing the factors on both sides and require greater assurances before embarking on a vigorous buying programme. Moreover, after the speculative boom period in 1949 and 1950, many investors found themselves left with high-priced stocks, or with realised losses, and these now are doubtless somewhat reluctant to re-enter the market.

New Issues More Plentiful.

Until recent months also, the market lacked the stimulus of the flood of new share issues on attractive terms to which it had become accustomed in the earlier post-war years. However, the increasing confidence in business and industry generally is now being reflected in a steadily-increasing volume of new issues, many being made by companies of outstanding calibre.

Two great trading banks have led the van in this regard, first, The Commercial Bank of Australia Limited, which recently obtained £1,842,635 in the form of new share capital and premiums, and now the Bank of New South Wales, which is seeking £6,036,250 through a 1-for-2 issue of £20 shares at £27/10/ each to its own shareholders. Other large organisations offering new issues are British Tobacco Company (Australia) Limited, which is making a 1-for-4 issue of 2,677,695 ordinary shares of £1 at 25/ to ordinary and "B" ordinary shareholders, and Australian Guarantee Corporation Limited, with an issue to shareholders of 612,566 ordinary £1 shares at 26/ each. Between now and December, seven Australian companies alone propose to raise over £11½ million of new share capital, which is approximately twice the amount raised by 44 companies in the last quarter of 1952.

Present indications are that many other companies will follow suit, and the balance of the current financial year may well see an active and growing market for new issues offering many attractive opportunities to investors. A stimulus will be given to this movement if, as expected, Capital Issues Control ceases at the end of December with the expiry of the Defence Transition Act. Already, it is reported that consents are automatic unless applications are held to conflict directly with defence objectives.

More Active Buying Warranted.

Viewed on a broad canvas, there are grounds for anticipating progressively better share markets and prices in the coming months. Consequently, a more vigorous policy of investment in good stocks appears to be justified on either a short or a long-term view. Since before the war, Australia's population has risen by 1,800,000, or 26 per cent, to 8¾ million, and the 9 million mark should be reached in the first half of 1954. This necessarily implies a steady expansion of the means of production, with the corollary of good average benefits for investors through new issues and other avenues.

Nevertheless, what is urgently required in Australia today is a realistic appreciation of the need for grappling effectively with the major economic problems, particularly that of costs which confront us. In other words, the solution of our national problems lies, not so much in the enlargement of over-all production capacity, involving increased capital investment, as in a more intensive use of capital per man. This can be achieved through modernisation of plant and production techniques, and particularly through more intensive individual effort, combining to bring about an increase in capital and horsepower per man.

I feel confident that the earnestness and ability of our great leaders in trade and industry and in the trades unions will ultimately achieve this objective, and that Australia will be able to look forward to steady growth and development with high living standards and a healthy, happy and industrious population.

Bright & Hitchcocks (Stores) Limited

Reg. Office: 125 Moorabool St., Geelong, Vic. **Directors:** J. S. Na (Chairman & Manag. Director), K. S. Nall, J. J. Woodwar G. Harvey, H. A. Thomson, R. L. Kefford. **Auditor:** P. Nelso

3rd Year ended June 30, 1953. Meeting September 28, 1953.

After taxation at pre-Budget rates, profit was £2,525 high at £31,120 and dividend was again 7½%.

The Chairman, Mr. J. S. Nall, gave the following address to areholders at the Annual Meeting on September 28:

It is with very great pleasure that, on behalf of the Directors, present to you this Third Report on the affairs of your Company ce its change to public company status. Your Directors are ther gratified that, notwithstanding the difficult months of ding in the latter part of 1952 and the increase in competition in s city, they are able to show an increase in the consolidated profit figure.

Turnover and Gross Profit.

Our turnover during the past year has been well maintained all sections of the Geelong Store and its three branches, and number of individual transactions was the highest ever re- ded. We are proud that such a record has been achieved, pro- ing as it does further evidence of the popularity of our store Geelong. In spite of the fact that we experienced price de- trol for most of the financial year, our gross profit rate scarcely ied from the low figure of the previous year because it was the icy of the Directors to keep prices as low as possible.

Price Control.

Price Control has now been reimposed and, as Chairman of is company, I would be neglecting my duty if I did not place ore you as shareholders your Directors' views on this subject. is strongly felt that we have long since reached the time when shopping public should determine the prices at which merchan- e should be sold instead of prices being fixed by an arbitrary ernment scheme. From observations and enquiries made in ny countries on my recent visit overseas, I am convinced that greatest progress has been made and the highest standard of sperity achieved where Government controls have been aban- ed. Not only are controls costly to a country but they check iative and enterprise, are irritating, extremely wasteful in time effort, and fail to achieve their objective. The greatest pros- ity abounds in those countries—America, Canada, England and ably West Germany—where freedom to trade normally exists. stralia took a backward step when Price Control was reintro- ed, and from the most recent figures compiled by the Govern- t in England, it has been proved that freedom from Price Con- has not resulted in higher prices to the public. Competition, key to low prices, is intense in the free countries, whereas re controls operate business lacks incentive. We can only hope t for the benefit of all, our Government will see the reasoning ch has been put before them so clearly and so often.

Expenses.

During the year our overhead costs have been rigidly controlled and our expense rate showed only the slightest increase. This rate is still among the lowest of any department stores whose records are available to us. Our main expense—salaries—is still to some extent beyond our control, but it is hoped that with recent decisions the inflationary spiral has been checked and that all will be able to enjoy some stability both in wages and prices.

Stock.

At balance date last year our stock was high, due to the great influx of imported merchandise, but this position has been rectified during the past year. Even since June 30, 1953, the stock has been reduced still further, and the Directors are satisfied that all stock is in a sound condition and conservatively valued.

Bank Overdraft.

Consequent upon the reduction of stock, the overdraft position has improved very considerably and the current position is even better than as shown in the published accounts.

Taxation and Sales Tax.

Reduction in company taxation announced in the recent Budget was most welcome, and will give much-needed relief from what has been a crushing burden upon industry and commerce, which is such a vital part of our economic structure. One very disappointing aspect of the Budget, however, was the Treasurer's decision to continue the iniquitous payroll tax. This discriminatory form of tax should have been abandoned before certain other concessions were made. Reductions in sales tax have now brought this impost down to a much more reasonable level, and will not only be most encouraging to many sections of the trade, but have already resulted in lower prices to the public of a wide variety of merchandise.

Superannuation.

It is again the recommendation of your Directors that an allocation of £2,500 be made to the fund for the benefit of the staff. We are happy to report that during the year the new and enlarged Staff Benefit Fund was finally introduced and was received enthusiastically by the staff. The membership stands at almost 100 per cent. of those who are eligible, and we are convinced that the scheme will prove to be of great benefit to all participants. The old fund has been closed and no new members will be admitted, but all existing members of the old fund will continue to enjoy its benefits as well as those of the new fund. The total credits in Superannuation Funds now approximate £35,000.

Overseas Trip.

As mentioned earlier, it was my privilege to have spent five months abroad this year on an extensive tour, taken largely at my own personal expense, from which I have only just returned. I spent much time investigating modern development in retailing in U.S.A., Great Britain, the Continent and Scandinavia, the results of which should be of benefit to the company in its future development. Considerable time was also spent in our London office, where we are splendidly represented, and many contacts were made with overseas suppliers, from whom we are now able to purchase more freely since the relaxation of import restrictions. Whilst overseas I maintained constant contact with the Directors and supplied them with the latest information on markets and store trends.

Building Development.

It is my very great pleasure to announce that, after many years of frustration due to building restrictions and some considerable time spent in planning, a contract is about to be let for the erection of a new second floor on the southern section of our building; that is, all but the men's store corner block. This, coupled with new lift facilities, the levelling of the first floor and some other minor developments, will provide much sorely needed room for departmental expansion and improvement of customer facilities. Work will commence almost immediately and will proceed at a rapid rate. We feel sure that the new building will be a further asset to the architectural beauty of our city.

Our Staff.

No Chairman's Address is complete without mention of the Staff, but it is felt that in this particular case special mention must be made of the undoubted loyalty and most gratifying spirit shown by all members of the Staff. These are factors beyond value in any organisation, and your Directors are proud to control the affairs of a company in which such harmonious relationships exist. It will always be their endeavour to maintain this happy atmosphere and to provide for the welfare of the staff, for whom many more amenities can and will be provided under our development programme.

Directors.

I want also to thank my co-Directors for their splendid support and co-operation, especially their efficient work during my five months absence abroad. My fellow-Directors have stated that the leadership and control exercised by the Acting Chairman of the Board, Mr. Kenneth Nall, has left nothing to be desired during recent months.

The Future.

This current year has opened on a very healthy note, and we are happy to state that our sales are ahead of last year and July was again a record. We feel sure that with the future of Geelong assured by its remarkable industrial development, this company can, by careful guidance and planned development, continue to hold its eminent position in the retailing life of the city. It will be the endeavour of all members in the organisation to grasp every new opportunity and to maintain our high standard of service, which we feel has earned us the right to use the term, "Geelong's Popular Store."

Beau Monde (Australia) Ltd.

Hosiery Manufacturers.

Reg. Office: Moore St., Moreland, Vic. **'Phone:** FM 2861. **Directors:** L. R. McFarlane (Chairman & Manag. Director), R. J. Hughes, D. T. F. Nicholson. **Auditors:** F. A. & W. A. Coghlan.

19th Year ended June 30, 1953. Meeting October 8, 1953.

Sales rose by 40% constituting another record. Profit also was 40% higher at £62,217, returning 18.1% on capital after a 2-for-1 bonus issue in June. Dividend of 10% is equivalent to 30% on capital prior to bonus issue, compared with 25% paid last year.

Since 1945 profits have increased each year and are now five times their 1945 level. This has been achieved without recourse to further capital from shareholders. Directors report that opening business for 1954 is heavier than in the previous year.

Record sales and profits were reported by the Chairman, Mr. L. R. McFarlane, in his address to shareholders at the Annual Meeting on October 8. His address reads:—

As you are aware, last year was the most successful since the commencement of your Company, and now I am pleased to be able to advise you that we have again succeeded in establishing another record in sales and profits. The total sales increase for the year was 40 per cent. You may wonder, as it has been mentioned to me on many occasions, how this ever-increasing profit is brought about. In answering this question, I consider the main features of running this or any other Company can be classed in the following category:

1. Increased output.
2. Keeping the plant modernized.
3. Keeping the plant in first class running order.
4. High standard of efficiency.
5. Endeavouring to create as happy an atmosphere as possible amongst those employed in the Company.

These items, if you care to give them consideration, cover an enormous amount of ground, in other words, it is only possible to succeed by having efficiency as a whole. Another very important matter is to avoid as far as possible non-productive labour. It is also important to spend your money wisely, or, in other words, to buy the most up-to-date machinery and the best quality raw materials available.

I might mention that I have continually, over the past years, been criticised for the success of your Company, and I think it only fair that I should have the opportunity of replying to my critics and advising them that this Company has sold lines of nylon full fashioned hosiery cheaper than any other full fashioned hosiery manufacturer in Australia, and I now say to my critics "What is the answer to that one?" and I repeat "What is the answer to that?"

A further rather interesting point is the comparison of the average wage rate. In the year of 1938-39, the approximate average wage for males was £4/7/- and females £2/5/-, whilst today, the approximate average wage rate for males is £14/8/- and females £9/14/6. This increase in labour cost is equal to 197 per cent. and 332 per cent. respectively, which does not compare with the increased price of hosiery which has taken place during the last few years, in fact, so far as your Company is concerned, we have been able to offer some hosiery at reduced prices.

You will also remember that I made reference during the last two or three years to the progressive programme which your Directors had in mind with regard to the future of this industry. I drew your attention to the building of a modern factory at Dandenong which is now completed, and also to the continued installation of the most up-to-date machinery obtainable in the world, in fact, our policy as far as possible has been to be first with the latest.

Products.

The wide range of hosiery we are now manufacturing is pr ably the largest in the Commonwealth. This is mainly brought ab by some of the exclusive lines we have introduced to the tr such as Kant-run, Seam-grip, Air Flo, Pinpoint and the finest all hosiery in Australia, 66-Gauge known as Glamasheer. The known as Pinpoint, recently released throughout Australia, is latest American method of making ladderless hosiery.

I also made reference last year to the difficulties experienced to the shortage of electrical power in our factories. This has been overcome, as we have installed the most up-to-date genera plants, both at Coburg and Dandenong, and no loss of time occurred this year through the shortage of electrical power.

The future policy of the Company will be the continual insta tion of additional modern machinery as dollars become availa We are fortunate in having shown sufficient foresight to make vision for a considerable additional amount of machinery wit having to spend any great amount of money in buildings, etc.

Considerable criticism has been expressed by correspondent some of the Interstate papers, and I particularly refer to N.S. with regard to nylon hosiery made in Australia. In reply to somewhat severe and incorrect criticism I would like to draw attention of the women of Australia to the fact that when n hosiery was first introduced into the Australian market it wa denier, whilst today the bulk of the hosiery in demand is 15 de In other words, hosiery today is only one-third the denier of hosiery knitted when nylon was first introduced. With this in I suggest that some consideration must be given to the ques of deniers of weight when purchasing hosiery. I shall, howe admit that the improved type of machinery and the much finer g helps to strengthen the finer denier stockings.

It was also stated that no ladderless stockings were mad Australia and I now wish to take this opportunity of contradic without fear, this statement, as we do manufacture non-run st ings. To prove that this statement is correct I might inform that the demand for this class of hosiery, since your Company the privilege of introducing it to the Australian women, has g so enormously that at the present time we cannot supply the requirements. We have, however, considerable additional mac ery on order to manufacture this class of hosiery and we hope in the very near future we shall be able to supply the market in

Opening business for the 1954 season is much heavier tha the same period of the present year.

Depreciation has been well taken care of as usual and the position of your Company, as you have noticed in your Bal Sheet, is very satisfactory indeed.

Appreciation.

Finally, I would again like to take this opportunity of than my co-Directors for their very loyal support and also to thank staff and employees of the Company for their excellent co-oper throughout the year.

n his address to shareholders at the Annual Meeting on Sep- er 29, the Chairman, Mr. R. F. Sanderson, said:

t profit for the year exceeded that of the previous financial year ,884, also the value of sales created another record in the Com- s history. These results are the more remarkable considering reatly reduced floor space available to us for trading due to uilding operations undertaken. Whilst apologising to our cus- rs for inconvenience caused them we can be more than gratified the high standard of excellence and good value we have pro- in our merchandise has been sought after by the public despite inconvenience.

hese building operations, which were commenced in April last, onsequent upon the decision of your Board to instal modern tors from the ground to the second floor, the installation of dern dining room for public use and a new cafeteria for that r Staff. These, together with the re-locating and re-equipping rtain departments for the greater convenience and comfort of ustomers will, we believe, when completed, enable us to pro- even better service than ever before.

Taxation.

he Federal Budget was brought down after the Company's nts had been finalised and results printed, therefore I would o refer to certain matters in that Budget which affected the nts before you.

he reduction in income tax rates on public companies has re- in an over-provision for tax.

he reduction in sales tax impelled the Company to lower the of goods on sale from 9 a.m. on the morning following the al Treasurer's Budget speech, consequently, whilst our cus- s rightly benefited there are stock losses incurred against the figure as shown in our accounts.

Provident Fund.

hen addressing you last year your Deputy Chairman, Mr. W. R. , made reference to the Board's desire to establish a con- ory Provident Fund for the benefit of the Staff, despite the that there are still in existence other funds with certain tions.

his Fund, known as the Buckley Provident Fund, came into nce subsequent to the last Annual General Meeting and has well supported by the Staff.

is under trustee control, is on a contributory basis, and is voluntary on the part of the Staff, but it is obligatory upon ompany to contribute its proportion, such amount of contri- this year being approximately £6,100.

Dividend.

The final ordinary dividend of 6½% as recommended by your Board will make a payment for the year on ordinary stock 9%, which rate is in keeping with that declared during the past few years.

A sum of £25,000 has been placed to general reserve.

I would like to register this Company's meed of praise to the Federal Government on the presentation of what must be called a "People's Budget". The lessening of the burden of taxation on the individual and on Companies will surely benefit the Nation to a great degree, providing the incentive for greater production and so maintaining the high standards of living enjoyed by the Australian community.

The further increase in quotas under the licensing system for imports will also ensure that the public is not deprived of a wide range of commodities and progressively make possible greater opportunities for the export of Australia's primary and secondary products.

During recent months further efforts have been made to close retail stores on Saturday mornings, but this Board is firmly of the opinion that such a step would not be in the interests of the shopping public, particularly those people whose conditions of work prevent them from shopping conveniently at any other period.

Directors.

You will doubtless remember it was reported at the last Annual Meeting that Mr. S. H. Rye had retired from the position of Managing Director owing to ill-health. I now regret to report that his health did not improve, and during the year under review he resigned from the Board. The casual vacancy thus created was filled by the appointment of the General Manager of the Company, Mr. F. D. Mathews, whose name, under the Articles of Association, will be submitted to you for your confirmation later on in this Meeting.

Appreciation.

Our thanks are due to our suppliers who have, throughout the year, continued to service us so splendidly in every respect, tendering at all times goods of the highest standard of excellence and enabling us, in turn, to provide our customers with goods only of lasting value at comparable prices.

I would like to pay tribute on your behalf to the work of our Management and Staff. To continue to administer a business of this magnitude with all its attendant problems is no mean task, but as has been accomplished during the past year, to add to these tasks the need for planning the alterations and improvements and providing for future greater service without too greatly disturbing the even flow and smooth running of the business, deserves our greatest commendation.

Ballarat Products Limited

The following address was given by the Chairman, Mr. A. F. Crosby, to shareholders, at the Annual Meeting held on October 2.

The net profit for the year ended on June 30, 1953, was £34,832 which compares with £39,298 for the previous year. This reduction came about in spite of a small increase in gross profit of £3,802, and is the result of an increase in expenses of £8,757.

Provision for income taxes is this year shown in the printed accounts at £15,586, but since this figure was computed, the reduced rates of Company tax provided for in the Federal Budget will reduce this figure to £12,236, a saving of £3,350. Taking the latter and now correct figure, the provision compares with the 1951/52 figure of £18,225 which means that the true saving on this item is £5,989. After adding income from investments of £1,193, to the net profit, and after deduction of preference and ordinary dividends, totalling £12,800, shareholders funds have been increased by £10,989 as the result of the year's trading. The amount now carried forward in Appropriation Account after making allowance for the over-provision of income taxes is therefore £36,815, compared with £25,826 brought in. Your Directors feel the results on this occasion to be particularly satisfactory in view of the more difficult trading conditions experienced for the greater part of the year under review.

Balance Sheet.

A study of the Balance Sheet will disclose that the principal change that has taken place since June 30, 1952, is the increase in the bank overdraft of £15,810. This, together with the profits earned during the year, is mainly represented by an increase in current assets, that is debtors and stocks of £9,553, an increase in fixed assets of £11,254 and a reduction in current liabilities of £2,815. The increase in stocks on hand is almost entirely due to a larger stock of raw materials held on balancing date but no increase in the usual very small stock of finished goods. Purchases of additional properties adjoining your Company's biscuit factory, together with some expenditure of a capital nature at the bacon factory, account for the increase in fixed assets. The former expenditure was incurred in preparation for the extension planned at the biscuit factory for the housing of the new automatic baking plant expected early next year. A few years ago the two sections of the biscuit factory were separated by three privately owned properties, but during the past twelve months we were fortunate in being able to purchase the last of these. Our plans now include the dem of these old properties and the erection of a new building adj the main factory which will provide ample floor space for th plant and at the same time enable a more economical arrang of the whole factory to be undertaken.

George Farmer & Co. Division.

It is again with disappointment that I have to report th sumption of manufacturing at the bacon factory was not cons in the best interests of the Company. The prevailing high and shortage of supplies of pigs of the quality considered es to our needs are the reasons for this decision. Further repe the bacon factory buildings and plant were carried out duri year and your Directors now feel that the condition of these of your Company is such that further expenditure in this re unwarranted, at least until the future of this section of the pany's business is more certain. In the meantime the premis being used for cold storage purposes and it is hoped that it fulness in this regard will continue to increase.

Sunshine Biscuit Co. Division.

The current year has commenced well with a steady dema your Company's products, but I feel I should warn shareholde it may not be possible to maintain our present turnover duri second half of the year owing to the inevitable interruption duction when the alterations to the biscuit factory buildin plant are being carried out. It is estimated that the new pla not be completely installed and in operation until about thi next year and therefore the advantages of increased producti economy will not be reflected until well after the close of the year.

Staff.

I would again express the appreciation of your Directors high standard of the work of the Company's staff and em generally and thank them for their continued loyalty and s It has given your Board considerable pleasure to set aside ordinary shares out of the approaching new issue for allotm employees and it is hoped that many of them will take this tunity of taking up shares on the favourable terms offered to

The company has made rapid progress since it completed the erection of a large refinery at Matraville (N.S.W.) in 1948. Products manufactured include petrol, light and heavy diesel distillates, oil for gas-making, fuel oil, and bitumen. It is proposed to open a refinery in Brisbane.

Under long-term contracts, the company is now drawing its crude oil requirements from both Anglo-Iranian Oil Company Ltd. and Caltex (U.K.) Ltd.

Net tangible asset backing (book values in consolidate balance-sheet)—£1/7/5.

Proposals to produce aromatic spirits and to open a refinery in Brisbane were announced by the Chairman, The Hon. T. G. Murray, M.L.C., in his address to shareholders at the Annual Meeting on September 22. His address reads:

The Profit and Loss Account shows that before providing for taxation the Company's net earnings amounted to £550,202 for the year as compared with £566,212 for the previous year.

Provision for income tax was made in the accounts at the old rate of 9/- in the pound. The new rate of 7/- will reduce that liability by £55,000 and increase the amount of profit carried forward accordingly.

Taking into account the increases in costs which were beyond our control, and the much more difficult trading conditions which were experienced during the year under review, the Board considers that the results should be regarded as more than satisfactory.

Our subsidiary company, W. B. Carr Constructions Pty. Ltd., had a better year than the previous one, so that the consolidated net profit before tax of both companies totalled £576,722 compared with £579,913 for the year ended June 30, 1952.

The Current Year.

The outlook for the current year is very encouraging but the future of this company, in common with most other industries, can be adversely affected, unless costs are stabilised.

Already the cost of shipping freights and harbour charges preclude carrying on of interstate trade at a profit, and as I said some years ago, unless this position can be remedied we will ultimately find the trade of most Australian industries confined to the States in which their factories are located.

The Future.

Many shareholders have asked me whether the establishment of so many more refineries in Australia is likely to affect this company's future. So far as the Caltex Kurnell Refinery is concerned your Directors are satisfied that operations will be conducted in a manner which would be to the mutual benefit of both companies. According to official forecast of consumption of petroleum products, the output of refined products from all the refineries now under construction will not supply all Australia's requirements and, therefore, some imports will still be needed.

New Projects.

Various proposals, however, have been studied which would diversify the Company's activities and give it the maximum stability in the future. Your Directors have, therefore, decided to do two things—

Firstly, your Directors propose to install the most modern ty of plant for the production of aromatic spirits. These are solven for which there is a large market.

Solvents are largely imported from America, and apart fro the advantage of thus profitably widening the scope of our activ ties the result will be a very substantial saving in dollar import

Secondly, your Directors propose to expand our operations Queensland by establishing a refinery in Brisbane—our subsidia company, W. B. Carr Constructions, has a branch there whi carries on contracting and the manufacture of bituminous pr ducts. The decision to build a refinery there is largely influenc by the excessive costs of interstate transport to which I ha already referred.

It is not anticipated that any new issue of capital will be ma in order to provide the finance necessary for the expansion pr gramme I have mentioned.

Conclusion.

I am sure shareholders will agree with me that the figur discussed in the printed report reflect great credit on the Mana ing Director, Mr. E. R. Griffin, and the staff generally.

The following report by the Chairman and Managing Director, Sir Frank Richardson, was circulated to shareholders with the Annual Accounts:

This is the twenty-sixth report as a public company and it covers the forty-seventh year of operation of the business which was established in 1906.

Presentation of Accounts

Stockholders will observe that we have departed somewhat from our previous practice and this report is now included in the full statement of the company's accounts combined with the notice convening this meeting. This practice of giving a fuller picture of the Company's activities follows the modern trend both in Australia and overseas and we feel sure will meet with the approval of stockholders.

Net Profit and Income Tax

The net profit on trading for the year, after providing for income tax, was £101,446. The profit exceeded that of the previous year by £20,915. In addition to the net trading profit the Company earned a further £69,142 profit on the sale of freehold property which, being a capital gain, is not subject to income tax in the Company's hands. Reference is made in a subsequent section of this report to the properties that have been sold.

Thus, the total net earnings of the Company for the year are £170,588 which is the highest total recorded in the Company's history. Comparative figures of profit and income tax for the past three years are as follows:—

	1953	1952	1951
Profit prior to income tax	£202,723	£140,781	£218,116
Less income tax	101,277	60,250	115,703
Net trading profit	101,446	80,531	£102,413
Add freehold profit	69,142	54,158	—
Total profit for year	£170,588	£134,689	£102,413

It will be observed that the amount reserved for income tax in respect of last year is £101,277. Unhappily this is not the end of the tax story. The Company pays other very substantial direct taxation besides income tax. The total direct taxation paid by the Company for the year ended 31st July, 1953, covering inc tax, land tax, pay roll tax and sales tax amounted to £248,600.

Dividends and Appropriation of Profits

As announced on August 25, 1953, your Directors recomm the payment of the following final dividends for the year pay on September 30, 1953:—

- On the "A" preference stock—3½ per cent. (making 7 per for the year).
- On the "B" preference stock—3½ per cent. (making 7 per for the year).
- On the ordinary stock—3¾ per cent. (making 7½ per cent. the year).

Interim dividends were paid in March, 1953 and, with final dividends, the total distribution by way of dividends for year is £85,959. Your Directors recommend that the freehold perty profit of £69,142 be transferred to Freehold Realization Reserve, increasing that account to £123,300.

Your Directors also recommend the transfer of £15,000 to General Reserve, thus increasing that account to £200,000.

The amount of undistributed profit brought forward from year was £11,139. If the recommendations of the Directors approved there will be a balance of undistributed profit to forward to next year of £11,626.

Reserves and Stockholders' Funds

Total reserves and undistributed profit of the Company total £670,639 which, when added to preference capital of £2 and ordinary capital of £875,000, give a total of Stockholders' of £1,836,129.

One of the financial statements included in this report gi comparison of Balance Sheet figures for the past ten years shows the steady growth in stockholders' funds. In summary total capital, reserves and stockholders' funds over the pas five-yearly periods are as follows:—

	1953	1948
Capital	£1,165,490	£650,932
Reserves	670,639	209,932
Stockholders' funds	£1,836,129	£860,864

The Year's Trading

Sales for the year were 16 per cent. greater than for the pre-ing year. Total turnover reached a new record level for the npany. Sales in every State in which the Company operates wed increased figures over 1952.

The year was not an easy one for retail traders throughout tralia. Government statistics and amalgamated returns from ders in the capital cities showed that, for many months of the , total retail sales declined on figures of the previous year. these circumstances your Board considers it has reason to be sfied with the increased turnover shown by our Company in latest financial year.

The percentage of gross profit showed a very small improve-t on the result of the previous year. The percentage operating was slightly higher than in 1952 and the final profit as a per-tage to sales was also slightly ahead of the rate for the previous r. The rate of net profit to sales remains at a very low per-tage.

The net profit of £101,446 is equivalent to 8.7 per cent. on total scribed capital, and only 5.5 per cent. on total stockholders' ds.

The year was one of readjustment to more normal trading itions. Goods were more difficult to sell, the buying public more price conscious and, with a diminution in the rate of tion, the year saw an end to the former substantial increases turnover which had been generally experienced by the retail le.

The year also brought a return of much keener competition ng retailers from which the buying public benefited very sub-ntially. This increased competition and its benefit to the con-er was made possible very largely by the lifting, for a brief od only, of Price Control Regulations on most articles sold by Company. This gave to all stores a degree of flexibility which bled them to fix prices more according to value than according cost price and there is ample evidence throughout Australia overseas that such a development reacts to the benefit of the sumer.

Unfortunately, before the year closed, Price Control was re-sed on certain items of merchandise. We believe this action the State Governments of New South Wales, Victoria, Queens-l and West Australia was a retrograde step. Price Control in e of war, or when essential commodities are in acute short ply, can be justified. But it is difficult to see the need for e Control in a period of adequate or ample supply of goods when competition, the public's best form of price control, is free as it is today in the retail trade in Australia.

Most other countries of the world which had a form of Price trol during the war and shortly afterwards have now abandoned to the advantage of their own economy and their buying public. believe the retention of controls in Australia merely hampers competition in the retail trade to the detriment of the consumer. e Control is costly to administer, it leads to endless anomalies, s expensive for the retailer and it serves no useful function in tralia today.

Import restrictions have operated harshly against our Company during the whole of the financial year we were able to place new orders for overseas merchandise. This resulted in some ur stock of overseas merchandise being depleted. Fortunately, restrictions are being progressively, but slowly, eased and our ook for supplies from overseas in the coming year is somewhat hter.

The Economic Stores, Perth, which, as you known, is con-ted as a separate entity, had a most successful year.

Despite the higher turnover of the year, the total stock on d was reduced by approximately £140,000. As a result the ratio tock to sales has shown a considerable improvement and stocks erally throughout the Company's branches are in good order.

New Branches

Just twelve months ago I reported that, after the close of that , the Company purchased a freehold property in Horsham, oria, which increased the number of branches operated by the pany to 44. The branch at Horsham has been in operation e September, 1952, and it is a worthy and profitable addition he Company's chain of stores.

Early in the financial year under review, the Company pur-ed two freehold properties, one at Wagga Wagga, New South es, and the other at Wangaratta, Victoria. In both centres had operated a branch for many years in leasehold premises h were of inadequate size for our needs. The two new stores purchased to improve our location and to provide additional e for trading. The moves made in Wagga Wagga and Wanga-t have proved successful and in both centres the Company is ving considerably increased figures.

London Office

The Company's London Buying Office, located in Regent House, Regent Street, London, is now firmly established and, under anager, Mr. Alan L. Carthew, formerly the Company's Manager Victoria and the Riverina, is providing a valuable service. With easing of import restrictions our London Office will play an easingly important part in the Company's organisation.

During the year it was necessary for me to visit London to er with Mr. Carthew and to call on many our our suppliers, in England and on the Continent. Practically all of our over-suppliers accepted the effect of import restrictions which were letely beyond the control of the Company. They have now ated their willingness to meet the orders we are able to place result of the progressive easing of the restrictions.

It was my first visit to our new London Office, which was established by my colleague, the General Manager, Mr. G. A. Bitcon, in 1951. I would like to report that, in my opinion, an excellent foundation has been laid and in the years ahead we will reap the benefit of this progressive move.

Freehold Property

Last year I reported to stockholders that the Company was in the process of selling the property it owned on the corner of William and Murray Streets, Perth. This property had been sub-divided into four lots, one of which was sold in the previous year for a profit of £54,158. In the year now under review two further lots were sold for a total of £157,328 which realised a further profit of £69,142. Your Board recommends this amount should be transferred to the Freehold Realization Profit Reserve.

There still remains another lot to be sold at a time convenient to the Company.

During the year the Company sold two freehold properties, one at Hobart, Tasmania, and one at Frankston, Victoria. The Hobart property was a small one which the Company acquired a few years ago as an adjunct to its Hobart business. With the purchase in 1951 of the freehold of A. Cumming & Son this small property was no longer required.

In 1950 the Company purchased a freehold property in Frankston, Victoria, which was occupied by a number of tenants. It appeared uncertain when the Company would be able to gain possession of the property or be in a position to rebuild it, and after careful consideration your Board decided to dispose of it. Both of these properties were realized for approximately the prices originally paid.

Convertible Deposit Notes

Early in 1953 the Company announced the issue of £250,000 in Convertible Deposit Notes of £50 each bearing interest at 6 per cent. per annum. The whole of the issue was offered to ordinary stockholders and was over-subscribed. The Notes mature on January 31, 1959 and holders have the option, exercisable on August 31, 1958, to convert their holding in to fully paid ordinary stock units at par for a face value equivalent to the face value of the notes. For Notes so converted interest payments will cease on July 31, 1958, and ordinary stock units issued in exchange will rank for dividend from August 1, 1958.

Balance Sheet

Total assets at July 31, 1953, increased by £62,000 from the total shown on the previous Balance Sheet. Investment in land and buildings showed a reduction for the reasons mentioned earlier in this report. I have also referred to the considerable reduction in the total investment in stock on hand.

The balance of customers' accounts showed an increase of £223,000 during the year which is a result partly of the Company's increased turnover and partly because of the greater use of credit by customers.

On the liabilities side it will be observed that there is a reduction of £156,000 in total current liabilities.

Convertible deposit notes appears in the Balance Sheet for the first time and covers the issue referred to earlier in my report.

The above movements have improved the ratio of current assets to current liabilities from 2.3 to 1 in 1951-52 to 2.9 to 1 in 1952-53. The Company's liquid cash position is very healthy and permits prompt payment for all purchases and the collection of maximum discounts which now form an important part of total earnings. It is worth observing that the tangible asset backing for each 5/- unit of ordinary stock has now grown to 8/10d.

There are now 5,194 individual stockholders in the Company, including 280 who are members of the staff.

Organisation

No business of this size can prosper unless it has a thoroughly loyal, efficient and happy staff. In this respect your Company is very fortunate and, on your behalf, I express thanks to the hard-working people of the business who do so much to make it successful.

I conclude by paying a special tribute to Mr. Percy Joseph Everard who had been in the Company's service in Hobart, Tasmania, for 28 years. For the last 25 years Mr. Everard was the Manager for Southern Tasmania. Due to his thorough, workmanlike knowledge of the trade, his hard work and integrity, he built up for the Company a very prosperous and soundly established business in Hobart. Mr. Everard has retired from active management but an arrangement has been made for him to act in an advisory capacity. It is to men of the calibre of Mr. P. J. Everard that the stockholders owe so much and, on your behalf, I thank him for his years of splendid service and wish him well.

From the Deputy Chairman.

Stockholders will be aware that, early in 1953, Her Majesty the Queen conferred upon the Company's Chairman and Managing Director, Sir Frank Richardson, the honour of Knighthood. Sir Frank's Knighthood was bestowed—in the terms of the citation—"in recognition of outstanding and unselfish public service and assistance to the Commonwealth Government during the Second World War and since."

To meet the request of the Commonwealth Government for the assistance of Sir Frank, the Board readily agreed that his services should be made available to the Government, and I wish stockholders to know it was in an entirely honorary capacity.

It is with pleasure I record in this report the honour conferred upon our Chairman and Managing Director, which reflects honour also upon the company, and on behalf of all stockholders extend to him our congratulations.

Functional Design . . .

A result of evolution through eons of time, the Australian kangaroo is a notable example of how native fauna is designed to function effectively in its surroundings.

Evolved over nearly a century of banking, the organisation of The National Bank of Australasia Limited is designed to function efficiently in serving modern Australian industry and trade.

With a network of over 650 offices throughout the length and breadth of the Commonwealth, with special departments for the conduct of overseas business and for the provision of travel services, trade and economic information, the National Bank is organised to provide for its customers a comprehensive service second to none in the Commonwealth.

Your enquiry will be welcomed and your banking needs will receive prompt and courteous attention at the Bank's nearest branch.

THE NATIONAL BANK

OF AUSTRALASIA LIMITED

(Incorporated in Victoria)

The Colonial Gas Association Ltd.

(Now Colonial Gas Holdings Ltd.)

eg. Office: 360 Collins St., Melb. **'Phone:** M 1436. **Other Share Register:** 12 Grand Avenue, Hove, Sussex, England. **Directors:** C. F. Broadhead, M.Inst.C.E. (Chairman and Manag. Director), J. M. Macfarlane, Robert Weir, G. L. Patterson. **Auditors:** Daniell & Sherlock.

65th Year ended June 30, 1953. Meeting October 14, 1953.

Gas sales by the parent company rose by approximately £89,000 to £1,384,282. Sales by subsidiaries were also higher, but dividends paid to the parent company were lower.

Inadequate coal supplies contributed to greater costs, necessitating an increase in the price of gas in July, 1953. Profit after tax at the old rates was £20,000 lower at £119,161. Ordinary dividend was held at 7%, leaving less than £4,000 for reserves.

Gas works operated by the company itself serve several large areas around Melbourne, extending from Deer Park to Williamstown on the West, and from Box Hill to Frankston on the East of the city.

Interests also are held, directly or through subsidiaries, in seven works serving Victorian country towns, and thirteen in Queensland, New South Wales and South Australia. Other subsidiaries handle by-products of gas-making, also the manufacture of dry ice and other chemicals.

An issue of £A300,000 5½% debentures was made in November, 1952, and was over-subscribed. Applications closed on October 26 last for a further issue of £A482,000 5% debentures.

Colonial Gas Holdings Ltd. was incorporated in Victoria on August 4, 1953, to acquire by exchange the shares in the Association. This offer has now been accepted by a sufficient number of shareholders, and the Association's shares have been delisted.

The following address was given by the Chairman, Mr. C. F. Broadhead, to shareholders at the Annual Meeting held on October 14:—

The Sixty-fifth Annual Report and Accounts for the year ended June 30, 1953, are now before you for adoption and the Directors have pleasure in making their recommendations. The results are satisfactory, although the profits earned were not so high as in the previous year.

As the accounts were finalised before the Budget Speech on September 9, the amount provided for taxation was calculated at the old rates. The provision, therefore, will be in excess of the amount actually required.

Coal.

It would have been pleasing to be able to report that during the past financial year the coal situation had improved but such was not the case. During the winter just ended, a stage was reached when it was almost impossible to maintain a supply of standard quality gas in the metropolitan suburban works with the quantity and quality of coal allotted to us. This company has planned ahead and provided up-to-date plant to meet the needs of a rapidly growing population in the areas supplied by it and, if we were able to obtain coal, say, of the quality received in 1947, we have sufficient plant to meet an even greater demand.

There has been continuous correspondence with the Chairman of the State Coal Committee in Melbourne and with the Joint Coal Board in Sydney, without our being able to obtain any permanent improvement.

In July last we wrote to the Acting Premier of the State of Victoria asking that the strongest possible representations be made to the Federal Authorities in an endeavour to obtain better treatment, and a reply was received that the Victorian Government would persist in its endeavours to secure a fair deal for the gas undertakings in this State.

As far back as November last, at an interview, we placed the situation before the Minister for National Development but without any result.

Subsequently, we wrote direct to the Prime Minister stating that we had been obliged to accept the dearest and dirtiest coal ever shipped interstate by New South Wales coal authorities and that it was no exaggeration to say that, during the past financial year, at least £100,000 had been added to our cost of production on account of coal alone. Further, that as there was no alternative but to pass this on to the consumer, coal costs continue to add to inflation.

There has been some improvement recently in the quality of coal received but first-class gas-making varieties are still in very short supply.

The Chairman of the Joint Coal Board, giving evidence before the Joint Parliamentary Public Accounts Committee, stated that coal prices would have to come down and the quality improve or the demand for coal would slacken considerably. The demand has already fallen off appreciably but the price of large coal has been increased still further. New South Wales coal of inferior quality has reached such an abnormal figure that an eventual collapse in the market appears inevitable. Unpalatable as such a prospect may be to coal proprietors, a marked reduction in the price of their commodity would make a major contribution to the stability of the country's economy.

Price of Gas.

The price of gas to consumers in our Melbourne suburban area was not increased during the period under review, the previous increase being in February, 1952. Between that date and June 30, 1953, the cost of coal had risen by £1/7/9 per ton, equivalent to approximately 2/- per 1,000 cubic feet of gas sold. It was possible to absorb this increased cost for a time because of a buoyant market for

(Continued on next page)

THE COLONIAL GAS ASSOCIATION LTD. (Contd.)—

residuals, the revenue obtainable from coke and tar being an important factor in determining the price of gas. Eventually, owing to a marked decrease in the demand for coke, with a consequent drop in price, there was no alternative but to increase the price of gas by 1/5 per 1,000 cubic feet as from July 15, 1953.

In other States, the price of gas is adjusted periodically in accordance with determinations of price-fixing authorities.

Under private enterprise the cost of production and distribution must be covered and a sufficient return on capital outlay provided to induce the investing public to continue its support. A similar principle should be applied to State-owned public utilities, which, in any case, are not subject to income taxation. This would ensure that their consumers also pay the real cost of the commodity.

Finance.

All areas supplied by the Association and its subsidiaries are developing rapidly and, as a result, your Directors are asked continually to extend mains. Capital expenditure is also required for meters, gasholders, and manufacturing and ancillary plant. Extensions are proceeding at Rockhampton, Ipswich, Wollongong, Box Hill and Footscray, and tenders have been invited for additional gasholders at Oakleigh and Footscray.

In my last address, I referred to an issue of £300,000 third-series debentures. That issue was fully subscribed and a prospectus of a further issue of £482,000 of this series, underwritten by Messrs. Ian Potter & Co., was despatched with the notice of this meeting to shareholders and debenture-holders in Australia. Applications close on October 26.

Reconstruction.

The offer by Colonial Gas Holdings Limited, a company formed by the Association, to exchange its shares for shares in the Association was accepted by the holders of more than 90% of each class of share, preference and ordinary, and an announcement made in the press that Colonial Gas Holdings Limited would now proceed with the proposal. A letter will be despatched this afternoon to each accepting shareholder, informing him of this decision, and it is requested that no time be lost in forwarding Colonial Gas Associ scrip so that the exchange may be completed with a minimu delay.

Shareholders who have accepted this proposal have acted w and those who have not are advised to do so promptly.

Quotation of the Association's shares will be suspended Stock Exchanges at 5 p.m. Tuesday, October 20, and entitlem to shares in the new company will be unofficially quoted on following day.

In due course, Colonial Gas Holdings Limited will take advan of the provisions of the Companies Act to acquire the rema shares in the Association.

This is the first stage in a programme designed to convert investment in an English company to one in an Australian comp which will not be subject to currency problems and should enh the security of your investment.

Long Service Leave.

Although the Association has experience of statutory long vice leave in Queensland and New South Wales the proposals o Victorian Government are a cause for concern in the State wher major interests lie, as an unusually large percentage of our will be eligible.

Apart from the financial liability which would face the comp the proposed legislation would cause acute staff difficulties s those with 20 years' service seek its immediate implementation.

There has been considerable comment in the press regarding production costs. The 40-hour week, annual leave, statutory days, social benefits and long service leave will need revision i financial situation should deteriorate.

Staff.

The Directors desire to express their appreciation of the carried out by the supervising engineers, managers and office s during another exacting year, and particularly to the Secretary Head Office staff in connection with the reconstruction programm

Davies, Coop & Co. Limited

Cotton Spinners, Bleachers, Dyers, Weavers, Underwear Manufacturers and Textile Printers.

Reg. Office: 625 Swanston St., Melb. **'Phone:** FJ 3125. **Directors:** F. Coop (Chairman), T. A. W. Furphey (Manag. Director), Hon. Sir William C. Angliss, K.B., V. L. Solomon, E. H. Noske, T. S. Naylor, W. O. Burt. **Auditors:** Morton, Watson and Young.

27th Year ended June 30, 1953. Meeting September 30, 1953.

Although turnover was lower, profit was slightly higher at £250,577, returning 18% on ordinary capital after payment of preference charges. Usual dividend of 12½% on higher capital absorbed £155,307.

*In 1953, credited with £175,928 share premiums.

During the year new issues of capital totalling £984,571 were made to the following:—

1. New issue to shareholders paid to 2/6 — £250,000.
2. Shares to Associated Textile Printers Pty. Ltd., to acquire the total shareholding in that company — £50,000.
3. Shares to The Bradford Dyers' Association Ltd.—£450,000. Details of this issue were given in the September, 1952, "Record" on page 564. These shares do not rank for dividend until 1st January, 1955.
4. 234,571 shares to The Hollins Mill of Australia Ltd. to acquire assets of that company, including stocks.

Profits for the year were adversely affected because of the necessity to close down the South Australian mill and curtailment of production in the New South Wales factory because of the reduced demand for heavy canvas and duck. These products are the subject of a Tariff Board enquiry during October, and Directors anticipate that these mills will shortly be in full production again.

At the Annual Meeting on September 30, the Chairman, Mr. F. Coop, gave the following address:

The main movement in the Balance Sheet figures since last year has been:

The increase in paid capital by	£987,131
Increase in reserves and undistributed profit	288,488
Increase in provision for taxation	44,314
Mortgage in State Savings Bank (taken over with Associated Textile Printers Pty. Limited)	25,000
Total increase in funds available	£1,344,933
This money has been available to provide:	
Reduction in creditors	£76,885
Reduction of bank overdraft	724,100
Increase in fixed current and intangible assets	543,948
	£1,344,933

Demand and Import Restrictions.

Production for the first half of the year was well above previous periods, but the falling off in demand for cotton canvas and duck and importations by the canvas trade adversely affected the activities of the South Australian mill which was finally closed down on 12th April, 1953, and production in the Sydney mill was reduced to a capacity to meet only orders on hand. The Directors regard seriously the necessity for this retarding of production, and whilst they realise that import restrictions were not imposed for the purpose of taking the place of tariff protection, they do believe that they were imposed for the purpose of conserving overseas funds. We have found it very difficult to appreciate the manner in which import restrictions have been administered insofar as licences have been granted to us for the importation of raw cotton and, at the same time, further licences have been granted for the importation of cotton canvas and duck—the goods that we would be making from the cotton imported.

Under these circumstances, we fail to see how the Government achieved its purpose of conserving overseas funds in a balanced manner as the market was short of goods which could not be produced in Australia but for which licences were not granted as funds had been absorbed by this and similar duplications.

Tariff Protection.

The question of protection for the cotton canvas and duck industry is the subject matter of a tariff inquiry commencing in Melbourne on 5th October, 1953, and we feel confident that this industry is sufficiently well established and is producing products that have, since the commencement of these operations, been classified as being at least equal to, if not better than, the imported products, to justify protection.

Flax, Underwear and Spinning Sections.

Although the drop in turnover caused by the falling off in demand for cotton canvas and duck was, to some extent, offset by increased activity in the flax mill, the total sales figure for the year was £2 million below that of last year.

The underwear production has been maintained, and it is anticipated that, in this section, in the current year, we will achieve the greatest production that has yet been known in this company. Demand for yarn has improved considerably over the last few months, and it has been possible to re-commence production in the Adelaide spinning mill, and this will soon be working to capacity on a single-shift basis.

Consolidated Results.

Although turnover has fallen, it will be noted that the aggregate gross profit of the parent and subsidiary companies, after providing for depreciation £85,466 (which is in keeping with that charged in last year's accounts), shows an improvement of some £27,215. Gross profit percentage trend is upward in every company. In the accounts included in the expenses, tax provision was calculated on the basis of last year's taxes, and, in consequence, there is a provision of approximately £50,000 in excess of what will be required under the new tax rates. Making allowance for this, it will be noted that expenses, compared with last year, will show a reduction of £27,094—thus the net improvement, as compared with last year, is £54,339.

Cotton Prices.

The raw cotton market has been reasonably stable for the past eighteen months, and it will be noted from the chart that there has been a substantial reduction in raw material cost in the £1 of sales compared with the previous year, all other sections of the chart showing an increase, with the exception that profits retained in the company are slightly down.

Employees and Incentives.

The Company is still able to maintain a high level of earnings to the operatives, and continual improvements are being made in working conditions which are contributing to improved labour relationships throughout the organisation. Throughout the year the total gross wages paid amounted to £1,722,465.

It is very gratifying to note from the press recently that the A.C.T.U. have adopted incentives in principle—it is believed that this will be one of the greatest contributing factors to a reduction of costs in manufacture in this country. By comparison with Great Britain and Continental countries our wage levels appear to be high, but we must feel gratified that the living conditions of Australian work people are much better than those experienced in other countries.

As an example of what has been achieved by the introduction of incentives, I would like to give the shareholders the following facts. In a good production week in the knitting dyehouse prior to the introduction of incentives in 1948, when the award wage was £6/16/-, 14,774 lb. of fabric were processed, using 279 manhours at a weekly wage cost of £54/16/10, being £3/14/3 per 1,000 lb.

By August, 1951, the award wage had increased to £11/4/-, an increase of 64.7%. Under the same production conditions as in 1948, but applying the 1951 wage rate, the 279 manhours used would have cost £87/6/3 in wages, being £5/18/3 per 1,000 lb.

Since the introduction of incentives in 1948, there has been a gradual reduction in costs, although award rates were increasing.

In August, 1951, 24,745 lb. of fabric were processed, being an increase of 67.5% above the 1948 production figure; 160 manhours were used at a weekly wage cost of £73/15/6. Therefore, after adjusting the 1948 production to the 1951 wage level, we have the following comparison:

	1948	1951
Production	14,774 lb.	24,745 lb.
Manhours	279	160
Wages	£87 6 3	£73 15 6
Labour costs per 1,000 lb.	£5 18 3	£2 9 7

This represents a reduction in costs of 58.1% and at the same time the individual operative's gross wages increased by 56 to 59%.

Even without adjustment of the 1948 wage rates, the introduction of incentives has enabled the company to absorb an increase in award rates of 64.7% and at the same time reduce the labour costs per 1,000 lb of fabric processed by 33% whilst the individual operative was substantially better off.

Associated Textile Printers Pty. Ltd.

During the year the Directors had the opportunity of acquiring the whole of the shares in Associated Textile Printers Pty. Limited. It was considered necessary to acquire these to enable us to make an immediate start in rayon piecegoods processing and also give us the opportunity of entering the screen printing field. Additional plant has been installed in this unit, and present activity is at a very high level. The quality of the goods being produced is being very favourably commented upon by the customers. This introduction into the treatment of rayons will serve as a background to the much bigger scale production envisaged in the new dyeworks which we hope shortly to commence building.

Expansion in Victoria.

To accommodate this, provide for the consolidation of the Melbourne factories and also for subsequent expansion in Victoria, an area of approximately forty acres of land has been acquired at West Footscray. This purchase has made the continued holding of Murrumbeena land unnecessary. After the link with The Bradford Dyers' Association Limited, Bradford, when we became committed to larger-scale dyeing than had previously been envisaged and for which we were unable to procure sufficient water and effluent at Murrumbeena, a start was made on the disposal of this area, and sales to date have been very satisfactory. It is anticipated that the ultimate disposal of this block will result in a substantial capital profit.

Hollins Mill.

We also had the opportunity of purchasing most of the assets of The Hollins Mill of Australia Limited at what the Directors considered to be a very satisfactory price, the basis of the purchase being the assets at valuation which were paid for by the company on the basis of 8/9 per 5/- stock unit. This acquisition gives the company the opportunity to enter new fields of production, and it is anticipated that in the near future this mill will be profitable.

Expansion in N.S.W.

Your Directors are also negotiating at the present time for the purchase of thirty acres of land in Rydalmere, near Sydney, the purchase being subject to the land being zoned for industrial purposes by the Cumberland County Council. It is expected that this will be done, and this area will provide for the concentration of the Marrickville and Villawood mills and also for subsequent expansion in New South Wales.

Although it is expected that the immediate future may present some difficulties which we have not been experiencing over the past years, your Directors view the ultimate future for this industry and this company with the greatest optimism.

Tribute to Management and Staff.

I wish to pay tribute to the management and executive staff in our various mills for their loyal co-operation and their unstinting efforts throughout the year.

Apart from being a large tyre manufacturer, the Dunlop organisation produces a wide range of lines, including mechanical rubber goods (conveyor and transmission belting and industrial hoses, etc.); footwear; sporting goods (golf and tennis balls, tennis racquets); weatherproof and waterproof clothing; "Dunlopillo" products; rubber floor coverings; plastic hose; batteries, and aircraft components.

Eighteen factories are operated throughout the Commonwealth and over 3,500 different standard lines are produced.

During the year, stocks fell by £3.7 million, and a bank overdraft of £2.2 million was converted to a credit balance of £367,000.

The Chairman, Sir Alexander Stewart, in addressing shareholders at the Annual Meeting on September 25, made the following remarks:

The net profit on the year's trading is a reduction of £143,990 on last year's figure of £908,551, but after writing back £100,000 from the Provision for Stock Revaluation the net profit for the year, as per the Profit and Loss Account, is £864,561. This result your Directors regard as satisfactory in view of the trading conditions experienced during the year.

Your Directors recommend final dividends of 5% on the preference stock (£46,500), making 10% for the year (£93,000) and 4½% on ordinary stock (£285,188), making 8% for the year (£507,000).

Following our usual procedure adequate provision has been made for the replacement of plant and machinery, the cost of which, under today's conditions, is continually increasing. Depreciation has been provided in the accounts to the extent of £434,015, and your Board recommends that an amount of £150,000 be transferred to the Reserve for Replacement of Plant. Your Board further recommends that an amount of £100,000 be transferred to the General Reserve, leaving an amount carried forward of £77,154, as compared with £62,593 brought forward from 1951/52 year.

Fixed assets after depreciation increased during the year by £148,206 and current assets decreased by £2,608,374 according to plan, this decrease being entirely attributable to the reduction in stock on hand.

Your company is very sound financially; in fact, the financi position has never been stronger.

Overdraft at June 30, 1952, was £1,793,488. This has be liquidated, and at June 30, 1953, there is a credit balance of £671,83 Current liabilities and provisions stand at £2,462,958 and curre assets at £7,427,740, an excess of £4,964,782, or a coverage of bett than three to one.

In the opinion of the Directors, the results of the year's oper tions as disclosed in the Profit and Loss Account have not be materially affected by items of an abnormal character.

Trading Conditions.

Trading during the year ended June 30, 1953, began on a qui note compared with the previous twelve months. The introducti of import restrictions by the Federal Government in March, 19 had had a profound effect on trade generally. In particular, t rate of importation and sale of automotive vehicles, trucks, tra tors and the like had been considerably reduced and the dema for tyres and other automotive accessories had declined. The co tracted scale of Public Works and general reduction of stocks consumers further affected the demand for the company's produc Factory production was adjusted to the lower level of demand, a your company took all necessary steps to readjust stockholdings both raw materials and finished goods correspondingly. After period of readjustment, the demand for all products manufactur by the company continued to increase, and by the end of t

financial year had reached a steady level. Your Board confidently anticipates a continuance of successful trading.

Your company has now developed to such an extent that it has become one of the largest industrial organisations in Australia. It now controls and operates eighteen factories throughout Australia, and provides nation-wide sales and service facilities to its customers. Over 3,500 different standard lines are produced. There is no doubt that Dunlop products enter into the everyday lives of all Australians. It will be of interest to you all to know that today your company is owned by no less than 13,842 members, whose average holding is 525 stock units. Over 60% of members each hold 250 stock units or less. These figures show how widespread is the ownership of Dunlop among the general public, and particularly amongst those of moderate means.

Increasing Manufacturing Costs.

There are some features of today's industrial life which your Directors view with great concern, and which may influence our industrial prosperity and development to a considerable degree.

First amongst these is the constantly increasing trend of manufacturing costs, which has become general in Australia. In the ultimate analysis the cost of all goods and services represents the labour cost of producing them. In a highly efficient industry with modern plant, modern production methods, and incentives, such as ours is, increases in the effective hourly wage inevitably mean increased costs and prices. These are proportionately inflated by indirect taxes such as payroll tax, sales tax, other similar imposts, and now the provision of long service leave. In common with many other Australian industries, the rubber industry is now faced with the fact that many of its products can be landed here, duty paid, from other countries and sold on our market at less than the price of the corresponding goods locally produced. It is apparent that with the lifting of import restrictions, and in the absence of materially increased import tariffs, a disastrous situation would develop for many Australian manufacturing industries, which could result in the destruction of much of our expanding industrial potential. A high standard of living cannot be maintained without a correspondingly high level of individual output. It is high time our wages structure was made to conform to the latter rather than the former.

In order to enable our industries to compete with those of exporting countries abroad, our wage level, for a like measure of output, must correspond in Australian currency to wage levels in the exporting countries concerned in terms of their currencies. This can be achieved by greater efficiency on the part of both labour and management, in an effort to reduce production costs and consumer prices.

The Commonwealth Government in its most encouraging budget just brought down, has now made welcome reductions in sales tax, customs and excise duty on a number of goods and services. This action has already resulted in reduced consumer prices for the goods concerned, which is a move in the right direction. With the basic wage now temporarily stabilised by the action of the Arbitration Court in suspending the method of quarterly adjustments, there is now a real prospect of a move towards achieving world parity in our industrial costs, and every opportunity must be taken to assist by effecting reductions in production costs.

Production costs in the rubber industry are additionally inflated by the continued imposition of import duty and primage on all raw rubber imported into Australia. This imposition at the present time increases the cost of rubber to the manufacturer by 20%. No other industry is burdened by a direct tax on its principal raw material. Its removal by the Commonwealth Government would be a welcome and significant contribution toward reducing costs in the rubber industry.

Taxation.

I have, on several occasions, mentioned the danger of continued high rates of company taxation, and we commend the action of the Commonwealth Government in announcing some immediate relief in this regard.

For some years industries have been faced with the difficulty of making adequate provision for replacement of plant and machinery as well as a reasonable return to shareholders after meeting taxation demands. The cost of replacement of plant, which is particularly heavy in the rubber industry, continues to increase each year, and depreciation allowances are inadequate. Extra provision required to meet this deficiency can only be made by creating reserves for replacement of plant. A strong, sound industrial structure cannot be built up without providing adequate reserves for the purpose from current earnings. Lack of sufficient funds put to reserve and used for modernisation and development is a common feature of Australian industrial finances, and in this regard our companies compare unfavourably with their counterparts in England and the United States. High rates of company taxation payable before transfer of funds to reserve have contributed materially to this tendency.

Restriction of Road Transport.

I would like now to refer to a question which not only materially affects the company, but also the proper development of this country as a nation. I refer to the continued suppression of heavy road transport by discriminatory legislation in favour of State railway systems, which is regarded seriously by your Directors.

Last year I pointed out to you the vital part played by the automotive industry in the community and the value of its productive capacity both in peace and in war. Such an industry cannot flourish without a market for its products, that is without a vigorous, progressive and widespread road transport system. In a country such as ours transport is a major element of cost, any reduction in which makes a contribution to the national economy. The most economical form of transport should, therefore, be employed in all cases, in the public interest. It is only in those circumstances where road transport is, in fact, the most economical form of transport, that legislative action has been taken to eliminate it under the guise of protecting the State owned rail transport system. There is a proper economic place for every form of transport in the community, and each form should be allowed to develop and assume its place free from artificial control. Automotive transport is a necessary adjunct, without which no other form of transport can function. We earnestly hope that our legislators will discard restrictive measures of this kind, and turn their attention to the development of a more intense and fully competitive system of transport based on progressive improvement of our national road systems. Such a system, backed by an efficient automotive industry, is a measure of any nation's development, prosperity and security.

Factory Expansion.

Although with the return to a demand approaching normal, our factories have a margin of capacity sufficient to meet the current requirements of the market, they are nevertheless working at a high level of production. Your Directors are conscious of the fact that although more normal trading conditions now prevail, the demand for the Company's products will continue to grow in line with the increasing population trend. Accordingly, development of the company's manufacturing potential is being actively pursued. Further additions totalling 120,000 square feet are being erected at the Shoe Factory, Bankstown (New South Wales), which will be completely occupied on a full production basis by February, 1954. At Bayswater (Victoria) additions to the Aircraft Division plant have been completed, and the first section of the new Mechanical Rubber Goods Factory is now under construction, and will be occupied early next year. These factories, when completed, will serve a dual purpose. They will increase the output of our fashion footwear, all types of rubber shoes and boots, and of mechanical rubber goods, requirements of which are in strong demand, whilst releasing space and manufacturing capacity at the main factories at Montague (Victoria) and Drummoyne (New South Wales), for increased tyre and tube production.

A modern boiler house is at present under construction at Montague factory and will be equipped with the most advanced boiler equipment designed specifically to burn Victorian brown coal. This will replace existing boilers installed prior to 1923, and will effect considerable economy in steam-raising costs. Further freehold has been acquired adjacent to the factory to assure future expansion.

The factory at East Fremantle, erected last year, has become firmly established. A wide range of rubber products is now being manufactured. We have ample land for extension of this most modern plant in the future.

New Tyres Developed.

Tyres and tubes for all purposes continue the major product of the company in sales value, and your directors are pleased to report once again that more new cars and trucks sold in Australia continue to be fitted with Dunlop Tyres than any other make. During the year a truck tyre of radically new design has been introduced to the market by your company. This tyre, known as the "Road Trak" major, combines some of the features of highway type truck tyres with some of those of cross-country traction type tyres. The "Road Trak" major tyre, now available in a full range of popular sizes, is suited to on and off the road service in a wide variety of service conditions. On highway service its cool running characteristics and long tread wear are outstanding and have created a strong and rapidly growing demand. There is no doubt that this tyre is technically far ahead of any other truck tyre at present on the market.

The Dunlop range of tractor tyres for farm use has been extended by the addition of a full range of tyres with open centre tread design. Your company can now offer the public tractor tyres with open or closed centre patterns, according to individual requirements of usage and soil conditions, as well as a range of universal patterns suited to light semi-arid soil types and for long wear on hard road surfaces.

Improved Tyres.

Technical improvements have recently been incorporated in our passenger and utility type tyres. The performance of those tyres is quite outstanding. Forty per cent. of the competitors starting in the recent Redex Reliability Trial were Dunlop equipped. The winning cars in every section of the event, including the outright winner, were all Dunlop shod. The first five competitors placed in order of points lost used Dunlop tyres. The performance of our tyres in this gruelling trial over some of Australia's roughest roads at high speeds and under hot conditions won high praise from all who took part. We are happy to see such undeniable proof of the superiority of our tyres under the most severe service conditions possible.

New developments now taking place in our laboratories will result in further improvements during the current year, and your company expects to introduce several new products to the market. We intend to maintain our long established leadership of the Australian rubber industry.

Miscellaneous Products.

Although tyres are the company's major product, nevertheless there has been a strong demand during the year for rubber footwear and mechanical rubber goods. Many new types of attractively designed leather, casual and sports shoes have been introduced. A newly-developed edge construction known as "Flexlok" has been introduced into all standard types of conveyor belts, which provides greater flexibility in troughing and passing over drive pulleys.

(Continued on next page)

DUNLOP RUBBER (AUST.) LTD. (Contd.)—

In the flexible plastics field your company has confined its attention to products which can be used in replacement of certain of its rubber products, in many cases with advantage. It is now easily the largest manufacturer of plastic garden hose, and there is a growing demand for industrial tubings, rigid pipes and conduits, packings, gaskets, motor car body trim and similar goods, now on a production basis.

Production of "Dunlopillo" cushions, mattresses, pillows, furniture and car seats and squabs continues on an increasing scale. The use of these goods is extending to a remarkable degree, and the company's subsidiary, Latex Products Pty. Ltd., now manufactures in four States in order to meet the requirements of the market. Latex Products has also recently acquired a majority shareholding in Moulded Hair of Australia Limited, whose products are complementary to "Dunlopillo."

Production of automotive batteries by the company's subsidiary, Battery Manufacturers Pty. Ltd., has continued on an increasing scale, and this company is now the leading manufacturer in this field.

Aircraft Division.

Your Directors are particularly proud of the achievements of the Aircraft Division, which is now well established in its Bayswater factory. A wide range of products for military and civil aircraft is being produced to fine tolerances and with superb finish and technical performance. Dunlop wheels, brakes, control jacks, high pressure air, oil and fuel hoses, and similar products play a vital part in the successful production of the new types of jet aircraft and pilotless planes now being manufactured in this country. The Aircraft Division also manufactures synthetic rubber flexible fuel tanks of the most advanced design for aircraft such as the "Vampire," "Canberra," and others. In the event of a national emergency, this section of your company's activities would be of inestimable value to the nation.

In the current year a number of new products at present under development in the company's laboratories will be introduced to the market. These products will, you can be assured, enhance our leadership in the rubber industry in Australia.

Directorate.

Your Directors extend congratulations to Lord Baillieu, K.B.E., C.M.G., Chairman of Directors of Dunlop Rubber Company Limited of England, and a member of your Board, upon whom Her Majesty the Queen has been pleased to confer the dignity of a Barony. It is a matter of great pride that this honour has been conferred on such a distinguished Australian.

Your Directors also wish to express their profound sorrow and regret at the death late last year of their valued and trusted colleague, Sir Walter Massy-Greene, K.C.M.G. For many years his sound advice and wide financial knowledge were of inestimable value to the Board, and his kindly personality endeared him to all.

As Alternate Director to Lord Baillieu, Sir Walter's place has been taken by Mr. J. Chester Guest, whom your Directors welcome as a member of the Board.

Staff.

As in the past, the results achieved by the company in the year now under review have been made possible by the continued loyalty, hard work and enthusiasm of the management, and men and women who go to make up the Dunlop team. To all of them, on your behalf, your Directors extend their thanks and appreciation.

Shareholders can also materially help the interests of the company by their continued use of Dunlop products, and the promotion of their use amongst those with whom they come in daily contact.

Die Casters Limited

In his address to shareholders at the Annual Meeting on Octo- r 8, the Chairman, Mr. J. B. Wallace, reported increased turn- er in all departments and higher gross profit. His address reads:

Before presenting my report for the financial year 1952 to 53, it is proper that I make reference to the death in September t year of Mr. Arthur Powell. Mr. Powell was Chairman of our npany from its beginning, and he, in fact, privately financed Die sters Pty. Ltd. back in 1926 when it was just an idea. He was ways active in our affairs and served the company as Chairman the Board right up till the time of his death. I was closely as- iated with him for most of this time, and his passing is an- ier milestone in the company's history. He is missed as a col- gue and an old friend.

Result.

The year began in an uneasy financial atmosphere, and caution administration marked the months from July to October. In- stry as a whole was pre-occupied by a general out-of-balance of cks, but as these cleared, confidence was re-established, and m the year's end our industry was buoyant. The year closed the excellent result already demonstrated to you in the balance eet, and with very satisfactory orders in hand and prospects ead.

The company for the year notched up further records, both output and profit. All manufacturing departments showed in- ases over previous years, and, as could reasonably be expected, greater gross profit resulted from the expanded turnover. Ac- dingly, your Board decided to recommend the payment of a 2 cent. bonus in addition to the usual ordinary dividend of 8 cent. for the year.

The affairs of your company, as reflected in the balance sheet, extremely satisfactory. You may remember that for 1951/52 transfer to reserves was made, but in this year £20,000 was d into general reserve, bringing our combined reserves account £193,253.

Planning.

In the year I was abroad from June to December. The main rposes of this were, firstly, to inspect modern plant and equip- nt; secondly, to investigate certain new materials at their rces and, thirdly, to seek manufacturing arrangements under a mber of recently developed processes. My journey was very cessful indeed.

On my return your Board set about a very thorough examina- n of the company's plants, facilities, services and operations. decided that it was time to put our minds to a definite pro- mme of planning for the company's future and, to this end, ns were made which involved consolidation in some parts and rous expansion in others.

We decided to offer our orchard property at Officer for sale to begin certain manufacturing operations in our new factory Donvale. We initiated a complete programme in our Adelaide Cromwell Street works to provide a considerable increase in r space. Negotiations were begun for the purchase of the one tory block which we occupied as a tenant. Land was purchased Cromwell Street and Islington Street squaring up our factory plan. A formidable list of machine tools and production equip- ment was approved for purchase replacing obsolescence and greatly adding to our engineering strength and overall productivity.

Note Issue.

All these things being of capital nature were rightly con- sidered as requiring finance of a permanent sort. From a number of propositions put forward, we decided upon the issue of £180,000 in redeemable notes carrying options to convert into shares at par, and this issue was underwritten by the firm of Ian Potter and Company.

This money is thus now available to carry out the important task we have set ourselves, and we are content that the works we have in hand will maintain and progress your company's al- ready established sound position.

On the agenda of today's meeting you will be asked to increase the company's present nominal capital from half a million to one million pounds.

Staff.

Under the previous heading, I have laid some stress on in- animate things, but the question of staff is treated more seriously. Company personnel of all ranks is, I venture to say, one of the most important aspects of administration, and you may be sure that your Directors are very conscious of their responsibilities to their staff and their duty in providing and training future executives and administrators. Further, we do everything reason- able to maintain and promote those elements of human values and human relations which have so determined our attitude towards labour, and which freely acknowledges our respective rights and mutual interests.

In the state of the company's growing business, and with the addition of the expansion programme already referred to, there occur many opportunities for advancement in all ranks, and our policy is to look for promotions from our own people. This out- look, coupled with such institutions as superannuation, medical services, etc., is, we think, largely responsible for the quality and the competence of our staff.

To provide for the future, we are seeking a number of suitable young men for training.

Operations.

Notwithstanding the considerable work which is going into research and development of such new industries as plastic pack- aging, our main interest continues to be the expansion of our existing business and the improvement of our products both in value and quality. Our plants in Melbourne and Adelaide are fully employed, and we are producing in our Donvale works.

I conclude my report to you on the state of your business with the observation that the year's result was brought about by a combination of top level policy, administration and factory pro- duction. Everyone on the payroll, no matter what his or her job, did his or her share in producing this record year's figures. Once again I state my thanks for their performance and co-operation and look forward to another year of success and achievement.

The following report by the Chairman, Mr. E. M. Harris, was circulated to shareholders with the Annual Accounts:—

It was with pleasure that your Directors were enabled to announce that the year's operations resulted in a profit of £30,888.

Having before them the amount remaining after making provision for Income Tax of £8,000, and writing off the loss of £6,238 brought forward from last year, your Board was pleased and felt justified in recommending to you the payment of dividends totalling 5% and absorbing £12,300. Of this amount, 1.84% or £4,526 is recommended for payment from "tax paid" profits reserve, and the balance, £7,774 or 3.16%, from the current year's profits. After the foregoing takes place and an adjustment in the balance of an investment is made, an amount of £8,242 will be carried forward into next year.

In my last commentary, I referred to the change in the policy of the Company, and it becomes apparent that this change was timely, although at times difficult, and in some instances regrettable, but the result of the year's trading is the best answer.

Trading Conditions.

As stated in the Directors' Report, trading during the year was difficult in the first nine months, excepting the volume at Christmas time, but during the last quarter of the financial year, greater confidence was shown by the public.

The turnover during this year did not reach last year's figures in value, but a reasonable rate of gross profit was achieved. Expenses were carefully watched and curtailed, and the result was a fair reward for courageous and careful planning, good merchandising and management. The General Manager (Mr. C. G. Hobbs) and the members of the executive have received the Board's congratulations and thanks for their part in this result.

Various new ideas and improvements are being carried out including, perhaps, the most noticeable—construction of an additional stairway from ground to first floor. This will, we trust, help to maintain a more even flow of traffic throughout the store, add to its appearance, and give better service to our customers.

Balance Sheet.

Turning now to the Balance Sheet, I draw your particular attention to some of the major points:—

Shareholders' Funds.—These, compared with last year, have risen by approximately £10,000 after making provision for the proposed dividends totalling £12,300. As you are aware, the proposed tax-paid dividend of 1.84% absorbs the whole of the tax-paid profits reserve.

Current Assets.—The difference of approximately £6,000 under this heading is due mainly to the reduction of stocks by nearly £37,000 and the credit balance of £28,000 with our Bankers. Both these features are commendable.

Current Liabilities and Provisions.—After providing for Income Tax (£8,000) and the Dividends (£12,300) proposed to be paid on 1st October, our indebtedness under this heading has been reduced by nearly £22,000, the largest item being the change from a bank overdraft of £44,000 last year to a credit balance this year.

Our liquid position is therefore quite sound and I am sure you will be pleased to note the various changes I have mentioned.

Board of Directors.

After the close of the Company's year Mr. Maxwell B. Moffatt asked to be allowed to retire from the Board because of the pressure of his personal business interests. We reluctantly accepted his resignation as from 31st August, 1953, and place on record his outstanding assistance to the Company during his three years as valued member of the Board. He gave generously of his time an ability.

Mr. L. Denton Kemp, who had been associated with us in th past as an alternate Director, accepted the invitation to fill th vacancy thus created. He and Mr. Gerald R. Hicks retire from th Board in accordance with the provisions of the Articles of Associa tion, but being eligible for re-election, offer themselves accordingly

The General Manager (Mr. C. G. Hobbs) was appointed an as sociate Director, and with his able executive staff in support, th Board expresses its confidence in facing the future.

Staff.

It is my great pleasure on behalf of the Directors to thank th staff for their loyal and good service in this year of change and pro gress. I also express our appreciation to our many suppliers fo the splendid manner in which they supported our buyers.

At the Annual Meeting on September 30, the Chairman mad the following supplementary statement:—

Subsequent to the preparation of my commentary on the year' operations, which has been printed and circulated with the State ment of Accounts, some important changes have taken place, an I think I might with advantage refer to them.

Taxation is the first and perhaps the most important item. Whe our Accounts were prepared, the provision for tax was based on th rates then current for companies. Since then the Federal Treasure has presented the Budget and it was gratifying to learn of the Gov ernment's intention to reduce the rates by 2/- in the £.

It was disappointing, however, to find that more liberal ar realistic depreciation allowances had not been provided, and tha the totally unfair double taxation on dividends had not been elimi ated. The fact that it is easy in this instance to tax profits at th source should not be used as an excuse for doing nothing to relie an inequitable levy. Shareholders should not be singled out to bea the heaviest load by double taxing of dividends.

It is only fair to add that pay roll tax, the incidence of whic has very little to commend it, did receive consideration, and althoug not abolished, some relief was granted.

In my address to you on December 21, 1951, I referred to th "vicious impost for Federal Land Tax", and at last year's meetin I was happy to record that the Federal Government had abolishe this wholly obnoxious tax. Little justification can be held for taxe that do not take into account ability to pay them. It is therefo surprising and most regrettable to record that the present Sta Government in Victoria proposes to increase the State Land Tax ra by three-fourths of the old Federal rate. In the case of your Com pany, this would absorb the saving in income tax this year.

Nobody can legitimately object to reasonable taxes when levie on profits earned, but when taxes are levied at high rates on purel notional and often inflated figures, and are payable whether or n a profit is made, then it is time that voices of protest were raise loudly and clearly.

Victorian land owners will be at a disadvantage when compare with say, those in New South Wales, where State Land Tax does n apply. Owners of properties already contribute large sums in rates fo local government. This latest proposal by the State to levy s heavily in a field of taxation which, for good reasons, was so recentl vacated by the Federal Government, emphasises the absurdity

aintaining so many governments and taxing authorities. It is rely not too much to hope for some streamlining of taxation with iformity and justice as its ultimate goal.

Suburban Expansion.

You will, I know, be interested in the latest development in your mpany in extending operations to the suburbs. In the first in- nce this will be confined to ladies' hosiery and lingerie, a depart- nt in which this Company has proved its ability to handle. At very early date we shall open in Bentleigh and Balwyn, and in me measure endeavour to meet the problems which "owner-onus" parking regulations bring to City businesses. If the City Council considers that such drastic measures are necessary, thus keeping modern transport out of the City, it will be expected that valuation in City properties will drop accordingly, and with it a reduction in municipal rates.

Turnover.

I am happy to report that sales since the close of our financial year on July 31, last, have been maintained as compared with last year, and we look forward to the spring and summer seasons, which should bring our share of business.

In addressing shareholders at the Annual Meeting on September the Chairman, Mr. G. M. Stafford, made the following remarks:

You will no doubt be pleased to learn that your Company has rned a record profit.

As a safeguard against unknown contingencies in the future, e Management has adopted a prudent policy on depreciation and idends, and a study of the statistics on page six of the Directors' ort will reveal that we have been conservative in declaring a idend of 6%.

The income tax provision shown in your report was calculated fore the revised rates were announced by the Federal Treasurer ly this month. Application of the new rates means a reduction tax liability by £2,938 and a corresponding increase in share- lders' funds.

The results for July and August, 1953, are encouraging and we ll have a satisfactory volume of business on hand.

Sales Tax

An additional concession in the Budget exempts entirely from es tax buttons and buckles sold by retail stores. Previously, thing manufacturers only were entitled to the exemption.

We feel that the credit for this improvement in trading con- ions in the Button Industry belongs to the Management of neral Plastics Limited who prepared detailed submissions point- out the unfairness of the regulations, and showing that tax s paid only by those who could least afford it—that is, those who de and repaired their own clothes.

Assistance and support was received from other button manu- cturers and a successful approach made to Canberra.

I am pleased to be able to announce that this subsequent endment to the regulations should result in cheaper buttons the public and a reduction of clerical work throughout the de.

The Employees

I would like to stress that in speaking of General Plastics, I fer to the one hundred and sixty men and women who comprise e factory, selling and administrative personnel who have con- buted so ably to the Company's success during the year. My nks go out to these people also to our Agents and Associates other States of the Commonwealth and in New Zealand.

Import Restrictions and Improvements in the Industry

The Company has maintained and strengthened its position in e trade both against local manufactures and overseas imports improved techniques, additional knowledge and the installation of more automatic machinery. Additional plant has been ordered from overseas which I expect will be installed by December of this year, and I have every reason to believe that an even higher standard of efficiency will be attained. On the other hand the cost of material and labour continues to rise, and whilst we are confident of holding our position against local competition, the relaxation of import restrictions may result in increased competition on certain lines.

However, the technical improvements which I have referred to earlier, coupled with a policy of trade and consumer advertising to which I will refer later, make me feel confident that we will hold a reasonable share of this market in future.

Advertising

During this year much more attention has been directed to the manner of presentation and display. A programme of trade and consumer advertising has commenced, our products being given prominence in trade journals and the daily press, also in shop window displays, counter cards, and cabinets. A photo of our new showroom appears on page seven of the annual report

National advertising will commence this week with an advertise- ment in a popular women's magazine.

F. W. Hughes Ltd., manufacturers of "Twinprufe" wools have combined with us in an attractive counter presentation in which our buttons are matched to their wool colours and we desire to express our appreciation of their co-operation.

Information from Overseas

Developments in plastics since the war have been spectacular. New processes and materials are constantly becoming available many of which are capable of adaptation to the Button Industry and other classes of manufacture which the Company could under- take.

The Managing Director, Mr. M. A. Griffiths, left for U.S.A. early this month in order to investigate the latest developments in the use of materials in this industry. I confidently expect that the trip will result in new ideas and improved production in the future.

Pearl Shell Industries

The factory of Pearl Shell Industries Pty. Ltd. mentioned in my report last year, has been established at Cairns, and regular supplies of pearl shell buttons are being sold. Additional units of machinery have been ordered from overseas and it is expected that future business will be on a larger scale. The quality of the mother of pearl used is excellent.

Record sales were reported by the Chairman, Mr. R. P. Carver, in his address to shareholders at the Annual Meeting on September 25. His address reads:—

For Hilton 1952/53 was a year of substantial achievement, in fact it was the best year in our history. When we started the year the textile industry was feeling the effects of the flood of imports and not until half-way through the financial year did the retail trade show some reduction of stocks. It is gratifying to note that while this readjustment was going on Hilton sales were steadily mounting and sales for the year were an all-time high.

Parent Company.

Referring to the accounts of the parent company, net trading profit was £104,696 compared with £82,576 in 1952. Dividends from subsidiary companies were £29,752. Income tax again took a substantial part of the company's earnings absorbing £47,365 and from the balance available your Directors recommend the payment of the following final dividends:—

Preference shares, 2½% (making a total of 5% for the year).
Ordinary shares, 4d. per share and a bonus of 2d. per share (making a total of 10d. per share for the year).

An amount of £15,000 has been transferred to General Reserve making a total of £77,000.

Consolidated Accounts.

The consolidated accounts of the Hilton Group of Companies reveal a net profit of £152,762, after provision for additional depreciation of £82,500, taxation £196,111 and £11,000 for the Staff Provident fund. An amount of £80,000 has been added to general reserve bringing this account to £170,000. Shareholders' funds have increased by £82,733 and now total £789,489 and the percentage of net profit to these funds is 19.3%.

Taxation.

Once again it will be seen from the graph accompanying the report that taxation, both income and payroll, exceeded the net earnings of the company. However, with the reduction in company taxation from 9/- to 7/- in the £ recently announced in the Federal Budget, the provision of £196,111 will be much more than will be required as the reduction applies to profits for year ended June 30, 1953.

Stock Reserve.

No further amount has been added to the Stock Replacement Provision which stands at £80,000 as it is considered this amount is sufficient to meet any possible reduction in replacement value.

Capital Changes.

During the year the company's holdings of shares in the subsidiary companies were re-valued. The surplus of the re-valuation over the book value of these holdings was then capitalised and issue made to shareholders of two new ordinary shares for ev three held. The ordinary paid-up capital of the company is n £390,177.

Trading Activities.

As I mentioned earlier, sales were higher than the record 1952 and the company has continued its policy of wider distribut of its products, together with efforts to further improve our s vice to customers. Our exclusive "Nyloseal" process has helped further increase the demand for Hilton nylons. Our laboratories constantly searching for improvements to further the quality of products and have now advanced with "Nyloseal" to a stage wh the protection it gives lasts the life of the stocking. The dema for Hilton socks for juniors is rapidly increasing and this com summer will see the advent of our children's socks reinforced w nylon for longer wear.

Plant and Buildings.

The company continued its long-range programme of plant velopment with a modernisation project in a constant effort to crease efficiency, service, and lower costs. This modernisation p gramme is being developed and our Managing Director, Mr. L. Smith, is now in the United States studying latest trends in machi and manufacturing techniques.

To further this programme of continued plant modernisation, to assure a high level of operating efficiency, it is necessary to re large sums of money within the business as full-fashioned knitt machines now cost five times as much as the 1939 machines. Fr this it will be seen that the depreciation allowed by the taxat authorities is entirely inadequate.

Further extensions to buildings were commenced during year and are expected to be completed within a few weeks.

Prospects.

While it is too early to forecast results to any degree of accur we enter the year with confidence, aided by the general optimi trend in business and, as sales since the balancing date show increase over the corresponding period of last year your Direct consider the results of the ensuing year should be satisfactory.

Staff.

The year's results and activities that are summarised were complished through the co-operative efforts of more than 600 m bers of the Hilton organisation. To each one goes our sincere tha for individually contributing to a fine achievement. Without wholehearted enthusiasm and loyalty of this group we could not h established such a record of continuous growth over the years.

I now have pleasure in moving that the Annual Report of Directors and the accounts for the year ended June 30, 1953, as p sented to the shareholders at this meeting, be received and adop

In the Directors' Report, which was circulated to shareholders h the Annual Accounts, the Managing Director, Mr. J. G. Robin-, made the following observations:

The demand for Stafford shoes was stronger than previously the production was inadequate to supply such. Although out- and sales slightly increased, net profit at £12,259 was down 82 on last year's. This was due to heavy expenditure for re- rs of fixed assets, increased costs in fuel, travelling, advertising, £5,000 has been provided out of the year's profits for income

To meet customers' requirements, additional made-up stock carried both in Melbourne warehouse and interstate.

Skilled operatives and junior male labour are still not avail-e, and without apprentices coming on all the time the future ition regarding journeymen is very serious. Calf leathers for 's work are irregular and difficult to obtain.

Income tax last year took over 32% of the profits. This, added the tax shareholders pay on dividends received, means that the ior portion of all profits goes to the Government. Payroll tax d was £2,517 and is increasing. If this wartime tax were lished the selling price of our shoes would be correspondingly reased.

Long service leave.—In whatever way such may be brought there is only one way to pay it—that is, by including it in the t of the article sold.

All assets are in satisfactory order and fully protected. Attention is drawn to the low book values of buildings, plant and machinery.

Your Directors appreciate the loyal co-operation of the staff during the year.

Otherwise than herein stated, the results of the year's operations have not, in the opinion of the Directors, been materially affected by items of an abnormal nature.

The following address was given by the Chairman, Mr. J. T. Reid, to shareholders at the Annual Meeting held on October 9:—

The year under review has seen changes in trading which were very difficult to predict because of the effect of import restrictions and the conditions which brought them about. However, when the measure of these effects was apparent, changes were made in the directions in which selling pressure was applied, with the result that the slackening in turnover in imported lines was partly compensated by increased sales of the more profitable products of our own manufacture. At the same time, a vigorous attack on costs was made, which has had a very satisfactory result and by which the efficiency of the organisation has been further improved.

It must be emphasised that the wide diversification of the Company's activities has again contributed to its stability and to maintaining a reasonably steady trading result.

Referring to the Consolidated Accounts for the year ended June 30, 1953, it will be seen that the group profit for the year was £102,351 after the provision of £87,374 for income tax.

This profit is lower than that of the previous year by about £30,000, and is a fair reflection of the frequently difficult trading conditions encountered during the period.

I feel that it can be regarded as satisfactory in all the circumstances. The taxation provided is some £17,000 higher than the amount which we now estimate will be required at the reduced rates announced in the recent Federal Budget.

Stocks have been substantially reduced, and at £870,206 are down by £325,325, with consequent relief to bank overdrafts which are £340,994 less than at previous balance date.

Turning now to the Parent Company Accounts, it will be noted that the net profit of £107,281, including dividends brought in from subsidiaries, shows an increase of £149 over last year. Because of the increase in shareholders' funds from £1,149,000 to £1,191,000, however, the earning rate has fallen from 9.3% to 9.0%.

The change in selling pressure to which I have referred is reflected in the increase by £79,000 in amounts owing by subsidiaries, which is the result of providing additional funds for the activities of subsidiaries which were able to step up their turnover. A further indication of the same point is the increase of shares in subsid companies, which have increased by £31,000.

Reserves will stand at £474,006 if approval is given to the Di tors' recommendation to transfer £40,000 from this year's profit. this figure they will equal 77.2% of paid-up capital.

Subsidiaries.

I would like to spend a few moments in giving you some de of the Subsidiary and Associated Companies, which are such important part of your Company's structure, and if I briefly n tion some of the products they make and the fields they serve, will gain an appreciation both of the value of your Company Australia and of the sound base upon which it operates.

James Hardie Trading Company Pty. Ltd.—Sydney & Newca James Hardie Trading Pty. Ltd.—Brisbane, cover, in their respec markets, lines similar to those handled by the merchandising of your business in Victoria, South Australia, Western Austr and Tasmania. The heavy chemicals, tanners' supplies, dyest and a wide variety of raw materials which they supply are all es tial to the various consuming industries, to which they also sell portant quantities of plant and machinery.

In its works at Botany, the Sydney Company produces indus adhesives, tanning extracts, polishing compounds, and electropla mops.

These companies have traded satisfactorily and profit throughout the year.

Spartan Paints Pty. Ltd. and Nason Paint & Colour Pty. Lt These two Companies manufacture and distribute throughout A tralia a full range of surface coating finishes, and the outstan success during the year of Spartan plastic paint highlights quality of product manufactured. It is, I believe, true to say never has a new paint product caught the imagination of the pu and gained such wide recognition and acceptance as has Spa plastic paint, and its use will undoubtedly be still further develo

Spartan super floor gloss is a floor finish used widely for pitals, shops and domestic floors and it, too, makes a consider contribution to turnover.

The activities of these Companies in the past have been largely cted to industrial business, and whilst that remains an important re of activity, a selling campaign to spread Spartan throughout retail field, of which plastic paint is a successful first step, is under way. Two new lines—Hardex exterior gloss paint and x enamel—both of which possess properties which should appeal ne public, are about to be introduced in this field.

Despite the pressure of increased competition our export busi- continues to grow.

These Companies have had a very successful year, and the ter demand for their products in all markets has resulted in er turnover in the face of an overall decline in the output of paint industry as a whole in Australia.

L. Horscroft Pty. Ltd.—A wholly-owned subsidiary with works outh Road, Moorabbin, manufactures laundry and dry cleaning hinery—it is, in fact, the largest factory in the Southern Hemi- re devoted to that work.

Association with overseas makers and continuous local research ntains completely up-to-date designs.

The products of this Company are supported by a range of trade olies available through the various Hardie Trading Offices, which distribute Horscroft machines in all States.

Although the year has been a particularly difficult one for light neering generally, a good level of production was maintained profits were earned.

Re-Po Manufacturing Co. Ltd., manufactures the famous and -advertised Re-po car polish and cleaner. Factories are situated ydney and Auckland, New Zealand, from which local and export kets are supplied. During the year a new Re-po product called auty Coat" was successfully put on the market, while the well- blished Re-po continued to gain ground.

Hardie Trading Co. (N.Z.) Ltd.—Another wholly-owned sub- ry, with Head Office in Auckland and Branches at Wellington Christchurch, is essentially an importing and merchandising ness which acts as distributor for many of our important over- principals and for products of our own manufacture.

Although the generel level of business in New Zealand was con- rably restricted by Reserve Bank Controls on Overseas Exchange, Company continues to give an excellent return on the funds sted.

Australian Bobbins Pty. Ltd., is an Associated Company in which your Company holds a half-interest and distributing rights which strengthen the position of our Textile Department. It makes a range of Bobbins used by most of Australia's Textile Mills.

Because of its almost entire dependence on the Textile Industry this interest has experienced a difficult year, but operations in recent months have been at a higher and profitable level.

Shareholders will have learned from the foregoing some of the activities which make for the success of their Company, and I suggest that they can, with pride and confidence, recommend and use its products.

Superannuation Fund.

For the last nine years the Company has had in operation a non-contributory Superannuation Fund to which it has paid the accumulated sum of £44,782. The purpose of this fund was to recognise loyal service on the retirement or death of an employee. It has become apparent that, with the lowering in the value of the pound, the benefits likely to be available were insufficient to be effective, and your Board has introduced instead a joint contributory plan, into which the old fund has been merged, to operate from June 30, 1953, by which greater benefits will be available. It is felt that this recognition of employees' service will add further to the good relations which exist both among staff and works employees.

The Future.

While it is most most unwise to try to forecast the conditions which will prevail throughout the year now running, I feel it is proper to say that your Board feels optimistic that with hard work, well directed effort, and a reasonable supply of goods from overseas, the future of your Company, and indeed the future of Australia generally, is bright.

This brings me to my closing point. I am sure you will join me in paying tribute to the executive staff and all employees who, by their work and thought, have served the Company so well throughout the year. It was a sad blow to lose by death the Secretary, Mr. R. J. Coles, who had been with the Company for 34 years, and who, with pleasantness and efficiency, maintained and presented the Company's Accounts each year. In his place, Mr. R. I. Smith, A.A.S.A., who served as Mr. Coles' assistant for 6 years, has been appointed.

John McIlwraith Industries Limited

Manufacturers of Builders' Supplies.

Office: 56 Lt. Collins St., Melb. **'Phone:** C. 6006. **Directors:** J. McI. Smith (Chairman), W. J. L. Ould (Joint Manag. Director), R. M. Coleman (Joint Manag. Director), H. C. Just, J. F. Hughes. **Auditors:** R. H. Shackell & Son.

Year ended June 30, 1953. Meeting September 25, 1953.

Although business was more competitive, profit was maintained at £241,494, leaving £72,864 for reserves, after payment the usual dividend of 12½%.

—Chairman's Address Overleaf

John McIlwraith Industries Limited

In his address to shareholders at the Annual Meeting, held on September 25, the Chairman, Mr. J. McIlwraith Smith, made the following remarks:—

You have probably learned from newspaper reports of the unexpected death of Mr. Ashmole, our Chairman and Managing Director, last Saturday.

All those who have been associated with him have learned to hold him in high regard and were shocked at the news. The Directors and staff feel a deep sense of personal loss.

Mr. Ashmole joined the Company in 1919—34 years ago—when it was a comparatively small proprietary Company, and shortly afterwards became General Manager.

He had outstanding ability and enterprise and under his capable management the Company prospered, so that today, as you know, it is a substantial Public Company.

I would like to offer, on behalf of all Directors, shareholders and employees, our most sincere sympathy to Mrs. Ashmole and other members of the family in their bereavement.

Re-arrangement of Board.

The loss to the Company made it necessary for your Directors to consider the future management, and it has been decided to appoint Mr. R. M. Coleman and Mr. W. J. L. Ould Joint Managing Directors.

Mr. Coleman has been a Director and General Manager of McIlwraith Industries Pty. Ltd. for many years, and Mr. Ould is Secretary of your Company. Both these men have been closely associated with Mr. Ashmole and have had the benefit of his guidance for many years, therefore, I am confident that the future management of the Company is in capable hands.

I have been appointed Chairman.

In his report, which was circulated with the Annual Accounts, the late Chairman, Mr. W. V. Ashmole, stated:—

Conditions during the twelve months were competitive, but our business in all States was well maintained, and the consolidated profit, after taxation, of £241,494, representing 17.9% on capital, is a very fine and satisfactory result.

Balance Sheet

The balance sheet figures tell a story of progress which I will briefly touch on.

Land and Buildings up £58,683.

This represents the provision of large and up to date office the Sydney factory, a modern amenities block at the Richm factory, and modern show-rooms at both Melbourne and Adel

Plant and Machinery—The increase of £20,766 is accounted by the completion of the new plant for the Richmond factory. programme we commenced some years back is now complete, we have probably the best equipped factory of its kind in tralia.

This is having a very beneficial effect on both costs and ou

Minority Interest—During the year we acquired the whol the minority interest in our South Australian subsidiary. The S Australian Company was the only subsidiary not wholly owne this Company.

Stocks—These were reduced by £45,203, mainly through ability to procure important raw materials at short notice, and being able to reduce reserve stocks.

Debtors—With a buyers' market and business well mainta the reduction of £26,133 indicates that our book debts are sound condition.

Loans from shareholders and others increased by £39,609.

This money is a long term loan to the Company by the la shareholders.

Bank Overdraft—Reduced by £79,236.

General

Generally, the Company's affairs are in a very sound condi Surplus stocks of raw material have been used up to advan extensions and fresh equipment completed and paid for, an June 30th we finished with a purely nominal bank overdra £11,911.

Looking ahead twelve months ago, I said that whilst condi were more difficult, we viewed the future with confidence.

To-day we are more confident about the future.

We are better equipped, and the competitive conditions o past twelve months have geared up the whole organisation.

We have just purchased fine premises in Geelong, and as as some alterations have been completed, we will open a br there.

Finally, I must thank all members of this organisation wh their enthusiastic and capable work have made possible this result.

Kenworth Rubber Ltd.

Reg. Office: 181 Lennox St., Richmond, Vic. **'Phone:** JA 5634. **Directors:** A. J. Moir (Chairman), J. F. Crosby, J. Beckett, W. Kirkhope, F. R. Bell, F. G. Irving. **Auditors:** Offner, Hadley & Co. 27th Year ended June 30, 1953. Meeting October 2, 1953.

Profit in the published accounts was £10,328 higher at £31,172, plus £5,058 profit on sale of assets. To this can now be added £6,000 arising from reduced taxation, making a total of over £40,000. Dividend of 6% on increased capital absorbed £36,078.

Kenworth Rubber Ltd.

In addressing shareholders at the Annual Meeting on October the Chairman, Mr. A. J. Moir, said:

The consolidated profit of the parent company and its subsidiaries in the amount of £68,093 comprised:

Profit on trading	£63,035	
Profit on sale of fixed assets	5,058	
		£68,093

This result was achieved after providing ordinary depreciation £21,149, an increased provision of £5,048, when compared with previous financial year.

It is proposed to deal with the total profit as follows:

erim dividend paid April, 1953	£18,039	
al dividend recommended to this meeting	18,039	
		£36,078
ite off—		
Proportion of licence fees	1,500	
Proportion of development expenses	2,771	
		4,271
lance remaining in Profit and Loss A/c. from which current taxation liability will be met		27,744
		£68,093

In the published accounts £31,863 is provided for income tax, the welcome relief in company taxation rates provided in the ent Federal Budget suggests that the liability for this item l not exceed £26,000.

Funds Statement.

The final instalment of 2/6 per share on the issue of 410,045 linary shares of 5/- each was received during the financial year ler review, and I make the following explanation of the sources total additional capital and the manner in which it has been d in the business.

Sources of additional capital were:		
Profit for the year		£68,093
Depreciation charged against revenue and not requiring funds		21,149
Increase in current liabilities—		
Bank overdraft	£21,126	
Creditors and bills payable	46,751	
		67,877
New capital—		
Balance of final instalments on issue of March, 1952	13,055	
Issue of 560,000 fully paid shares of 5/- each for purchase price of Tyresoles business	140,000	
		153,055
amounting to		£310,174

and this total was applied as follows:

Increase in fixed assets before depreciation—		
Buildings and plant		£168,192
Dividends paid—		
October, 1952	£11,789	
April, 1953	18,039	
		29,828
Income tax paid		19,459
Increase in intangible assets before writings-off		82,812
Net increase in current assets, i.e., debtors and the like	41,055	
Less: Decrease in stock	31,172	
		9,883
		£310,174

There are two items in the Consolidated Balance Sheet to which should like to draw your attention and the first of these is the reased investment in freehold land and buildings.

Land and Buildings.

This increase is purely temporary and represents to a large gree the value of the new factory site and buildings at Tottenm. The item will be progressively reduced as existing factories e sold after plant has been re-installed at the new site.

As at this date, one building in Bendigo, which previously used the Revitan activity, has been disposed of, whilst all the uipment previously housed in the North Bendigo mill has been stalled at Tottenham, and this Bendigo property also will be ered for sale in the near future.

Ultimately it is expected that the proceeds from the sale of isting freehold land and buildings as they become vacant will some extent offset the cost of the new factory.

Goodwill.

The other item on which you may desire some explanation is odwill which now stands at £95,753 against £15,766 last year. e bulk of this increase arose through the purchase of the entire siness of Tyresoles (Aust.) Pty. Ltd. about which you were ad-ed at the last Annual Meeting. This involves the acquisition both tangible and intangible assets.

Revitan Pty. Ltd.

Mention has been made of the disposal of the freehold prorty, plant and goodwill of Revitan Pty. Ltd., one of our subdiaries, which was engaged solely in the manufacture of fibreard sheets.

The difficulty in marketing a product such as a fibreboard eet, which in some instances is used as a substitute for leather the footwear trade, is due to the fact that it is not a complete product in itself, and its sale is restricted to those few companies allied with the shoe industry, whose main activity is the processing and marketing of sub-assemblies which in turn are purchased by the shoe manufacturers and used by them as an integral part of the finished shoe.

One of its main ingredients is scrap leather, supplies of which are controlled by the suppliers of those types of materials with which fibre or leatherboard sheets are in direct competition, and it was this factor, together with the opportunity of taking an immediate capital profit which influenced your Board's decision.

The Future.

Whilst it is difficult in these times to say with any degree of certainty what the future may hold, there are nevertheless certain factors which your Board believes must tend to your Company's greater success.

Despite the gradual easing in import restrictions, which in turn makes for keener competition, turnover for the last six months of the financial year showed a marked improvement over the turnover for the first six months.

Tottenham Factory.

Of a total area of 58,000 sq. ft. of new factory buildings at Tottenham, 48,000 sq. ft. has already been completed, and certain major items of plant comprising:

2—60″ Mills
2—84″ Mills
1—84″ Calender
1—84″ Rotocure

and several extruders, have been installed and run in, while the Bridge Banbury Mixing machine, previously operated at Bendigo, is due to return after a major overhaul within the next two weeks.

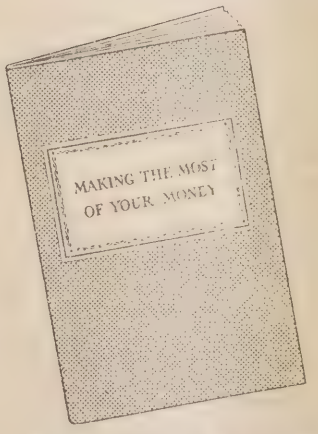
It is planned that certain of these items of plant will be in production before the end of this calendar year.

Perhaps I might digress here to acknowledge the assistance we have received from Dunlop Rubber Australia Ltd., who by agreeing to carry out a considerable amount of prior processing on our behalf, enabled us to overhaul major items of plant before re-installation.

Tyresoles (Aust.) Pty. Ltd.

Another factor which will tend to greater activity is the extension of the Tyresoles activities to South Australia, Western Australia and Tasmania, where negotiations are in train to float a series of subsidiary companies in which we will hold a fifty per cent. share, the other fifty per cent. being held by the several local interests who have suitable factory buildings and long-established trade connections.

MAKING THE MOST OF YOUR MONEY



In times of rapid economic change and increasing complexity, the services offered by The Equity Trustees can be of considerable value to all who own property of any kind. Call or write for a copy of this booklet —it outlines the services of a modern trustee company in planning for the future.

At the Annual Meeting on October 6, the Chairman, Mr. John J. Woodward, gave the following address:

The result of the year's operations, your Board feels, must be considered satisfactory, as trading during the year has been difficult.

The trading profit of this company and its wholly owned subsidiary, "Menzies (1943) Proprietary Limited," was slightly lower at £38,955. The depreciation charge and directors' fees remained unchanged at £6,000 and £1,100 respectively, whilst provision for taxation was shown at £13,432. The consolidated net profit after providing for these charges was £18,423.

Your Board has declared dividends of 7% on the preference capital and 4% on ordinary capital, absorbing £17,825, whilst £1,000 has been transferred from Appropriation Account to the Employees' Provident Fund. This leaves £12,320 to be carried forward in the Appropriation Account.

Reviewing the Balance Sheet, the mortgage of £43,200 which existed, has been repaid to our mortgagee. I am glad to say that although the liability to our bankers has increased, the overall liability to external sources of funds has been decreased by £7,023.

Price Control.

Our business of conducting a public utility—one that gives service to the public, namely, that of a first-class hotel, is still subject to price control, and our charges are closely watched and controlled. Price controls will never control costs, and this is the crux of our problem. We are in a very competitive business, and unless we give service and value we cannot meet the everyday competition which exists. Controls are no encouragement to efficient management.

During the year we have carried on with our programme of alterations, maintenance and repairs, so as to modernise the hotel as far as practicable.

The apartments and residential side of our operations have been most satisfactory. Many of the rooms and bathrooms have been renovated and redecorated.

Although sales have been maintained at a high figure, unfortunately they have been offset by increased costs, particularly in the diningroom and banqueting department. It has indeed been a problem throughout the year to minimise this factor without lowering the standards which have always been a feature of Menzies dining service.

The building has been maintained in a good state of repair, and the plant in sound working condition. Maintenance expenditure during the year was considerable due to the overhaul of service pipes and mains. We have also very heavy maintenance and repair work ahead which will be a drain upon future profits. We cannot turn a blind eye to many such liabilities, but our greatest is the continual rise in the basic wage. We are controlled as to selling prices in the diningroom, our wage cost and hours are our greatest liability factor. Much of it cannot be passed on or be recovered. Unfortunately, our increased wages do not lead to increased production. We look for and urgently require the G ernment to assist industry in reducing taxes, the cost of Gove ment and to assist in stabilising the basic wage.

Day by day—in the papers and in reports of Balance She issued—we read of warnings about costs—basic costs—such wa ings are becoming so numerous that we tend towards taking notice of them. There is, however, a general feeling taking ro and it seems to be one of frustration and irritation that nothing being done, or can be done, about it unless Government action ta place.

Taxation.

Taxation has been provided for and should meet the taxat assessment when received. It is a heavy drain on the liquid sources of the company and presents a grave problem to a Bo of Directors when they desire to pay a reasonable dividend a at the same time make adequate reserves for outmoded sto plant replacements, etc.

However, on the brighter side, we are continuously sou after for accommodation and service. Considering the serv which is rendered to the public and particularly the travelli community, your Board feels that we should receive much m consideration by way of taxation relief. This could be done some form of free reserve which could be set aside out of pro utilised over a period, or if not so utilised, ploughed back into t business on which tax would be paid.

The year under review saw both Her Gracious Majesty, Qu Elizabeth's Coronation and the Hotel Centenary. Each of th occasions were celebrated in turn with successful Gala Dinne The Centenary Dinner was honoured by the presence of His E cellency the Governor, Sir Dallas Brooks, and Lady Brooks.

During the year Mr. H. F. Journeaux tendered his resignati as Chairman of the company due to ill health. I am pleased say he has now recovered and has retained his seat on the Boa and that we shall continue to have the benefit of his many yea experience in hotel operations, combined with his sound advice

Licensing Act.

There have been public announcements of the intention Cabinet to amend the Licensing Act. We are, of course, very mu concerned in any amendments, and your Directors feel hot should be allowed to serve wines and spirits beyond the eig o'clock limit to diningroom patrons. The unsocial aspects of t ban in Victoria has attracted the hostile attention of the trav ling public and those who dine.

Your Directors feel constrained to point out that while t Licensing Act is repressive in most of its provisions, these s specially marked in relation to a residential hotel such as ou which has a large and discriminating number of casual dinir room patrons.

Your Board is strongly of the opinion that where a hotel c prove that it serves bona fide meals to its diningroom patrons, t

icensing Court should have the power to grant a permanent late ence to a time to be decided for the service of liquor with those eals.

This would be regarded as recognition of liquor with meals a conventional, social and cultural amenity.

In June, the Company's General Manager, Mr. G. H. Bassant, ft on a round-the-world tour to study hotel conditions and methods other countries. Your Board felt that this was very necessary, having regard to the greatly increased number of overseas visitors coming to this country.

Appreciation.

My fellow Directors join with me in expressing appreciation of the excellent work performed by the staff and employees of the Company during the year, and the fine spirit they have displayed in so doing.

The following address was given by the Chairman, Mr. G. J. les, to shareholders at the Annual Meeting on September 25:

Although this is the twenty-seventh Annual Meeting of the mpany, the business which was not converted to a public company until 1926, celebrated its 100th anniversary this financial year. r 100 years it has traded in the same position in Bourke Street retailers of Men's and Boys' clothing. Its progress has therefore en closely related to that of Melbourne itself. The original site s of course been enlarged by acquiring adjoining properties so at the small shop of 1853 has grown to the present four storey lding, which is completely owned and used by the Company.

Profits

The net profit for the year, after providing for taxation amounts £36,361. This compares with £22,677 last year and £38,400 for 51. Since the accounts were closed, the Federal Government has nounced a reduction in public company income tax. This is a lcome relief, but it will in our case be absorbed by the additional ctorian State Land Tax announced this week.

Dividends

Your Directors are pleased to recommend final ordinary divinds of 3.6 pence per 5/- ordinary share (6%) making 6 pence per are or 10% for the year and the usual final of 3½% on preference ares.

Balance Sheet

Stocks have fallen by approximately £56,000 due partly to lower quirements in piece goods now we have reduced our manufacturg activities, and partly from faster stock turns in all departments. We are still carrying a full range of merchandise to give our stomers as wide a choice as possible in all requirements for n's and Boys' wear.

Owing to the sale of the factory, a reduction of £43,000 is shown the accounts for buildings, plant and fixtures.

Trade debtors show a rise of £24,500 and there is a reduction mortgage loans of £50,000. The company's liquid position is much onger, the current assets now being three times current liabilities.

Trading Results

Sales for the 12 months ending July 31st showed a small rection on the previous year. Trade from January to May, 1953, was substantially down on 1952 figures but since June 1st there has been a revival and the volume of sales is now showing an increase each month which is most encouraging.

When price control was lifted from most clothing lines in August, 1952, prices remained steady, despite small increases in award rates of salaries and wages. The reason for this was that clothing was plentiful and there was keen competition between traders and manufacturers for the more limited demand by the public. In fact many of our sales were made at lower prices, because the lifting of price control encouraged department buyers to comb the markets for the best values at prices attractive to the public, instead of following the practice all too common in recent years, of buying at any price and selling at cost plus the percentage margin of profit as prescribed by the authorities. There is little doubt that when stocks are plentiful in the clothing trade, price fixing is redundant and costly and should be abolished.

A marked feature of our trading was the increase in credit sales, largely through the use of our well-known budget accounts. We were, I believe, the first to introduce this service to Melbourne which we did in 1936. Many of our present customers have used their accounts regularly since then. The service provided an easy and confidential way of purchasing clothing, and has proved popular with those people who prefer to pay their way with small regular payments on a planned basis.

The sporting goods department on the 4th floor was closed last year and the space has been used to extend the showroom space for our radio and electrical department.

Future

The Board is confident regarding the future of the Leviathan business. Although the boom conditions of 1951 brought about some over-expansion in Men's wear trade, this position now appears to have been corrected and we can look forward to more steady progress in the future.

The Federal Budget just announced gives everyone a little more money to spend on their personal needs and this will help all types of businesses, while the reduction in company tax will assist public companies to strengthen their reserves and buy new plant and equipment which will help in reducing costs and prices to the public.

The following address was given by the Chairman, Mr. E Coles, to shareholders at the Annual Meeting on September 23:-

It is with much pleasure that I report to you another sati tory year.

Sales.

Owing to a slackening in the building industry, trading c tions have been somewhat difficult but the Company has been to offset this by the efforts of the Directors in recent years i panding the Company's business and extending the lines pro so as to meet a reduction in trade in any one section of its busi

In both volume and value Sales effected reached new records and ie additional gross profit earned covered the increases in costs manufacture and distribution during the year.

Dividends.

The provision for Income Tax was made prior to the release the Federal Budget early this month with the result that there an overprovision, and the carry forward is more than appears in e Balance Sheet.

Your Board seeks your approval today of:—

(a) Final dividend of 3¼% on the 6½% cumulative preference stock units £812 10 0

(b) Final dividend of 6% on the ordinary stock units £22,500 0 0

)th of which are in respect of the half year to June 30, 1953.

You will note that the bonus shares, later converted into stock hich were issued to you in January of this year, carry the same ividend as your paid-up ordinary stock units.

In addition, we are also recommending a transfer of £20,000 to eneral Reserve to bring the credit up to £150,000; this sum, together ith the unappropriated profits, amounts to 44% on the issued apital.

Taxation.

The relief provided in the Federal Budget in respect of income ax and other charges on industry and commerce not only confers financial benefit on all, but should give a great fillip to trade and enerally assist in raising the standard of living.

The Future.

The Company is in a sound financial position and coupled with n excellent plant it is in a position to further expand its activities nd production, therefore, we face the future with confidence.

Formed in 1947, the company operates an old-established otel in George Street, Brisbane. The present building was com-leted in 1941. The company also owns the adjoining Salisbury hambers.

During the year additional air-conditioning plant was in-talled. Results for the current year to date are better than ast year.

In addressing shareholders at the Annual Meeting on September 21, the Chairman, Mr. R. F. G. Wilson, made the following remarks:

It is my pleasure to present to you the Sixth Directors' Report and Annual Accounts for the past year.

Before I do so, however, may I remind you all that a new Sovereign of the British Commonwealth has been crowned and the wealth of affection and esteem which was then demonstrated, augurs extremely well for a long and happy reign. We join with Her many other subjects in our wishes that a peaceful and prosperous period is in store for all and we express our duty and affection towards Her.

Operating Results.

You will have noted from the published accounts that the trading operations for the year resulted in a net profit, after providing for income tax, of £40,366—a reduction of £2,539 on 1952.

As the amount of the promised reduction in income tax was not known at the time of closing of the accounts, your Directors deemed it prudent to provide for income tax at the then current rate of 9/- in the £.

The Treasurer has announced in his Budget a reduction in this rate and it means that this Company has charged to the 1953 accounts an excess provision of £7,200. Had this lower figure been taken into account, the Company would have shown an improvement in its net profit over last year's of £4,600.

The net profit, as shown, which is after allowing for income tax at 9/- in the £, after paying the preference dividend, is equal to 14% of ordinary capital, so your board had no hesitation in recommending an ordinary dividend of 10% for the fourth year in succession.

Undistributed profits carried forward and General Reserves total £67,412, which is approximately 6/- per ordinary share, whilst we have £5,000 also set aside in a special account to meet repairs and renewals of an extraordinary nature should such expenditure prove necessary at some future date.

Balance Sheet.

We are always pleased to remember that Goodwill appears in our Balance Sheet at not more than £101.

You will all be glad to see that despite capital expenditure of £8,966 (mostly on additional airconditioning plant) the bank overdraft at June 30, 1952, of £29,950 was converted to a credit at the bank of £1,688 at the close of this current year.

Since the close of the year we have invested in the purchase of a further amount of £21,700 face value of Commonwealth Loan, bringing the face value of our total investment to £50,000, and after providing for the purchase price and also the payment of the final dividends amounting to £17,850 (which I trust you will later pass) we will have still a credit at the bank.

Current Trading.

I am happy to tell you that our trading figures and results for July and August this year are well ahead of those for last year and we have no complaint with those 1952 figures.

We still cannot report any real progress with the additional bedrooms to be built on the flat top of this building. We are hoping, however, that by next year they will be in actual use. Brisbane certainly needs greatly increased first class hotel accommodation.

Branch Registers.

As notified in the Annual Report steps are being taken to establish Branch Share Registers in Sydney and Melbourne, which action we are assured by brokers will be greatly appreciated by Southern shareholders.

General.

The business of running such an Hotel as ours is not an easy one and good results can only be shown by keeping the closest watch on expenditure and at the same time ensuring that guests receive the best possible service.

You may be interested to know that the Hotel employs a staff of approximately 300. Wages paid total just on £150,000. There were a quarter of a million serves of food in the Hotel for the year and bedroom (and, of course, private bathroom) accommodation was provided on 78,000 occasions.

Perhaps no other type of business is open to the criticism rightly levelled at a high class Hotel if the service falls even a little below standard. We are not complacent about it, but you will be glad to know that we get more praise than complaints.

The Directors again record their appreciation and thanks to the Manager and Staff.

Malcolm Moore Industries Ltd.

Reg. Office: Williamstown Rd., Port Melb. **'Phone:** MJ 1111. **Directors:** A. J. Hancock (Chairman), Malcolm Moore, L. P. Briggs, A. J. Longoni, G. E. Todd, H. F. Walsh. **Auditors:** W. Kirkhope & Co.

Year ended June 30, 1953. Meeting September 25, 1953.

Volume of activity of each subsidiary expanded during the year and profit was £4,744 higher at £155,278, returning 28.9% on larger capital. Dividend was again 20%.

In addressing shareholders at the Annual Meeting held on September 25, the Chairman, Mr. A. J. Hancock, said:—

The aggregate net profit earned for the year, £156,105, slightly exceeds that earned during the previous year. Profits were struck after providing adequately for taxation, depreciation and, of course, all working expenses.

Dividends on preference and ordinary capital took £113,542, as compared with £90,000 last year, and the sum of £45,000 was transferred to general reserve.

Balance Sheet.

The aggregate balance sheet of your Company and its subsidiaries as at June 30, 1953, once again indicates that shareholders' funds are fully employed. During the year the investment in fixed assets, that is, in such items as Buildings, properties and plant, increased by £218,845, whilst the investment in current assets, i.e., stock, work in progress, debtors, etc., increased by £266,678.

The satisfactory financial position of your organisation is indicated by the ratio of approximately two and one-half to one between current assets and current liabilities and by the similar ratio between shareholders' funds and outside liabilities.

Increase in Capital.

At the date of last Balance Sheet, 350,000 of our ordinary shares were paid to 5/- only plus 5/- premium. During the year the balance of 15/- capital plus 15/- premium per share was called up—the final call being due on June 30. At that date only a small amount of calls were unpaid, and, subject to this, our paid-up capital is now £1,050,000 while share premium reserve is £360,000 and general reserve now amounts to £385,000. Shareholders funds at June 30 totalled £1,786,899.

Diversity of Activities.

I commented last year on the advantage we reap by owning a chain of subsidiaries each engaged in a different activity. Each of these subsidiaries has extended its scope and volume of activity during the year, and I propose briefly to review their development.

Moore Road Machinery (Aust.) Pty. Ltd.

During the past year this Company (formerly Associated Earthmove Pty. Ltd.), which specialises in building heavy earthmoving equipment, road machinery and tractor equipment generally, has established distribution subsidiaries in several States and will shortly establish others, thereby completing its own Australia-wide sales and service organisation.

Like all companies in this industry, its operations this year have been adversely affected by restriction of funds available for public works and particularly for maintenance of roads. Our manufacturing activities were further curtailed by the policy of the Commonwealth Government in admitting competitive equipment from overseas under by-law free of duty, thereby nullifying the protection granted to this industry by the Tariff Board. Such forced reduction of manufacturing volume necessarily increases costs which is clearly not in the national interest.

Prospects for this year appear to be improving, and should be enhanced by our increased range of products and our extended marketing organisation.

Springvale Conveyor & Engineering Co. Pty. Ltd.

This Company continues to progress. The first unit of our new works at Springvale, a building of some 60,000 square feet, has been completed and brought into operation.

We have a substantial backlog of conveyor contracts and a good flow of new enquiries, some of which are for major undertakings.

Prospects for this unit of our business are regarded as promising.

Moore Hydraulics Pty. Ltd.

This comparative newcomer to our group continues to grow. Great scope exists for development of new hydraulic applications in both the agricultural and industrial fields. We have continued during the year with our programme of design and development of a large range of pumps, valves, cylinders, motors, etc., and the development of improved production methods.

Output is planned to increase rapidly during the current year and this Company may be expected to contribute its share to our total revenue.

Moore Crane & Engineering Company Pty. Ltd.

Moore Crane, after a record output for the year just ended, has a programme of work ahead which will ensure a full shop for the next twelve months.

As a builder of overhead cranes up to and exceeding 100 tons hoisting capacity, also grab bucket transporters, gantries, etc., it is able to compete with both local and overseas manufacturers, and is budgeting for another profitable year.

Power Farming Equipment Pty. Ltd.

This company is rather unique in its sphere of operation, which is the design and manufacture of mounted hydraulically operated equipment for all popular makes of farm tractors. It is well and favourably known to the farming community, and the demand for its products is steadily increasing. Profitable results may be expected for the coming year.

Overseas Associations.

During the year our Managing Director, Mr. L. P. Briggs visited England and U.S.A. to make contact with our various friends

those countries. This visit was extremely valuable, as he was ble to make arrangements for several new franchises and for pro- ucts we build here under licence. In addition, he was able to rrange for a leading English manufacturer to build a range of our esigns of earthmoving equipment in England under licence from s for export to world markets. This is highly gratifying to us, oth as an acknowledgment of the quality of the equipment we build nd as an aid to establishing the name of our products throughout ne World.

Future Outlook.

Our prospects, since our products are all used for essential pri- ary and secondary industries, must always closely parallel the ational outlook. Our National position appears today to be ealthier than for some years past. As a company we are better tted than ever before to produce substantial volumes of road achinery and earthmoving equipment, conveyors and bulk material andling plants, hydraulics, cranes and mechanised farm equip- ent. We are still faced with extremely serious problems in trying o compete with overseas costs under our wage and working hour onditions and relatively low individual productivity, but your Board eels we can face the future with reasonable confidence.

M. B. John Ltd.

Valve Manufacturers.

eg. Office: Creswick Rd., Ballarat, Vic. **Directors:** M. W. B. John (Chairman), M. B. John and J. T. John (Joint Manag. Directors), W. Maddern, I. R. John, D. L. John, L. A. Perkins. **Auditors:** Evans & Metcalfe.

7th Year ended June 30, 1953. Meeting September 30, 1953.

Record sales were again reported and profits were higher at 58,776, although earning rate on higher capital was lower at 5%. Unchanged dividends of 10% absorbed £39,652.

The company has a high reputation for its valves for steam, ater, air, oil and gas services.

Demand for the heavier type iron and steel valves is healthy. lthough demand for the lighter non-ferrous types declined arly in 1953, normal conditions are now returning.

Production costs are too high for export markets, but local emand is expected to grow.

New works are now partly occupied and the transfer of rther sections is proceeding.

In April, 1953, the company issued £250,000 Unsecured Re- istered Notes, details of which were given in the March Record" on page 153.

The following address was given to shareholders at the Annual Meeting on September 30 by the Chairman, Mr. M. W. B. John:

I am again privileged to present the Annual Report to the shareholders of this company, and I might add, before proceeding, that this is the first time in which the annual meeting has actually been held in the company's offices. In the old offices this could not be done but, as you see, this new Board Room is quite adequate for the occasion. This meeting has been called in the afternoon instead of the usual morning meeting to enable any shareholders who so desire to inspect the new works, and I cordially invite everyone present to do so.

It will be seen from the Directors' Report that after writing off £23,571 for depreciation and providing £53,500 for taxation, there remains a profit of £58,776. Your Directors recommend that from this amount a final dividend of 6% be paid which, when added to the 4% interim dividend, makes a total of 10% for the year. It is proposed to transfer £15,000 to general reserve and carry forward the balance of £23,965.

Turnover and Stocks.

Turnover was again a record even though a lull was experienced in orders for merchant lines during the latter part of the year under review. The efforts of merchants to reduce the value of their stocks during the period of financial stringency caused this lull, but there is evidence now that their stocks are becoming depleted and that a return to normal and regular ordering is taking place. Advantage was taken during the lull to replenish our own exhausted stocks of the rapidly moving lines, and we are now able, after many years, to once again give prompt deliveries of this type of valve. This build-up is reflected in the stock figure in the balance sheet.

Whilst on the one hand we were experiencing a temporary slackness in orders for the smaller type valves, on the other hand the demand for heavier type valves, such as are usually supplied against government and large private contracts, has been well maintained, and at the present time we have orders in hand and pending which will keep sales at a healthy level. Because of increased output of this class of valve, made possible by additional plant, stock in process of manufacture has risen considerably. This is also reflected in the stock figure.

In my last report I mentioned that raw and semi-processed materials were becoming easier to obtain, but that their costs were still rising. The picture, I am glad to say, has changed completely in the last twelve months, and a much happier state of affairs now exists in this regard. Whereas for many years, owing to scarcity of supply, we were forced to carry abnormal stocks of this class of material in order to carry on production with a minimum of interruption, today it can be obtained at short notice and at fairly stable prices.

Markets.

With regard to future markets for our products. An unbroken spiral of continually rising costs in Australia over the last six or seven years has gradually extinguished all hopes and plans which we had, in common with many Australian manufacturers, of exporting to markets in the Far East and beyond. In 1946 when the basic wage was £4/17/-, we were competing successfully in these markets and building up excellent connections. Today with the basic wage at £11/12/- we are hopelessly underpriced by British, American, German, French, Italian and Japanese valve manufacturers in markets virtually at Australia's back door, and which should be the natural outlet for her manufactured products. Many of Australia's industries are as efficient and modern as any in the world, but even so cannot bridge the gap created by the great disparity in wages combined with a forty-hour week.

The domestic market is the only one left for the products of many Australian industries, and with planned immigration on a generous scale and the implementation of bold and courageous schemes to open up and develop the vast resources of this Commonwealth, I see no reason why it should not be a rapidly expanding one. I am optimistic enough to think that it will take this company all it can do to keep pace with the growing demand for valves on the home market.

New Works.

Just as the year under review was closing the first move was made to transfer operations to the first and largest unit of the Company's new works in Creswick Road. This section was planned to house the machine shop, assembling and testing shop, and the finished goods and despatch section. You will be pleased to learn that this move has now been completed. The building to house the new mechanised foundries, which has been mentioned in previous reports, is now nearing completion, and a start has been made with installation of plant. It will be approximately another nine to twelve months, however, before this unit is actually ready to commence production. In the meantime, our present foundries will continue to supply our casting needs. Other units such as pattern shop, laboratory and canteen will follow on a later date.

McIlwraith McEacharn Limited

Steamship Owners and Coal Merchants.

Reg. Office: 94 William St., Melb. **'Phone:** MU 9401. **Directors:** S. T. Edwards (Chairman and Manag. Director), C. L. N. Barratt, F. G. L. Harding, I. N. Holyman, W. I. Potter. **Auditors:** C. R. Tadgell.

27th Year ended June 30, 1953. Meeting October 8, 1953.

After provision for taxation at the old rates, profit was £135,366. Taxation reductions will increase distributable profits by approximately £28,000 to £163,000, which is £16,000 higher than last year. Dividends of 6% absorbed £60,000, leaving £103,000 for reserves.

The company operates the passenger motor vessel "Kanimbla," of 11,000 tons gross. Other units of the fleet of 8 vessels of about 20,000 tons in all are engaged in the interstate coastal trade and in carrying coal, under contract, for the Australian Gas Light Company.

Costs of operation are still high, and replacement of ships is a problem for the company.

In March, the diesel-engined collier, Hexham Bank, was commissioned, and a motor-cargo vessel of 5,500 tons dead weight has been ordered. Liquid funds of nearly £1 million were held at balance date.

The following address was given by the Chairman, Mr. S. T. Edwards to shareholders at the Annual Meeting held on October 8:

I would comment upon certain features of the Balance Sheet:

Shareholders' Funds

Paid-up capital	£1,000,000
Reserves	809,000
Profit & loss account carried forward	13,917
TOTAL	£1,822,917

Your Company has liquid assets which are invested in Commonwealth Government and other securities to the extent of (after providing £50,000 against possible loss on realisation)	£952,375
and in shares in Companies listed on the Stock Exchange	54,905
TOTAL	£1,007,280

The net profit of £135,366, including income of £38,995 from investments, and after providing for taxation at the 1951/1952 rates (the excess provision is estimated at approximately £28,000), and depreciation of fixed assets, is satisfactory.

Fleet

The Company took delivery in March last of the 2,100 ton d.w. motor collier "Hexham Bank," which was built at the Yards of Evans Deakin & Co. Limited, Brisbane. It is anticipated that this vessel will prove to be a valuable addition to the Company's Fleet.

Your Board has placed an order, subject to certain conditions, with The Burntisland Shipbuilding Co. Ltd., Scotland, for the building of a cargo vessel of approximately 5,500 tons d.w.

Heavy expense was incurred in putting the collier "Hetton Bank" through Lloyd's Special Survey, and similar costs will be experienced in respect of "Mortlake Bank" and "Pelton Bank." However, as a result, the useful life of these vessels should be materially prolonged.

The volume of cargo carried has been maintained and some improvement in turn round in ports has been experienced. It is, however, essential, in the interests of all who look to the Maritime Industry for their livelihood, that cargoes be handled more expeditiously, in order that shippers may be encouraged to em sea carriage to the maximum extent.

The Company's Agency business is operating with satisfac results.

Replacement of Tonnage

This problem continues to be one of the gravest with w the Shipping Industry is faced.

The process of replacement should be a continuous one if strength of a Company's fleet is to be maintained. Unfortuna replacement vessels cost many times the cost of the original as

As I remarked last year, depreciation earned and set a **during the economic life of a ship should, in theory, be sufficien** provide for the replacement of the asset, but, at the present **of replacement costs, the fund** accumulated from that source entirely inadequate, even when supplemented by other earn which have been carried to reserves after being taxed, and t very small extent by the scrap value of ships sold at the end their economic life (after provision for taxation on portion of proceeds).

Accordingly, under existing taxation allowances for depreciat the problem of providing for fleet replacement is made all the r difficult.

The Budget concession in company tax will assist but not s the problem, and it is to be hoped that the Government will it possible in due course to afford some further relief from t **tion in respect of sums which are utilised for replacements.**

This problem is further aggravated by instability of costs material and labour, and uncertainty as to delivery dates wi render it impracticable for shipbuilders to revert to the nor practice of quoting fixed prices. Consequently, shipowners are quired to accept all the hazards of cost instability during the t **to four years between the placing of a contract and delivery,** they may find the ultimate cost of the ship is too high to pe of economic operation.

Shipbuilding costs cannot be considered in isolation. They n be related to the running costs of ships—new and old—to the vol of traffic, and to freight rates, and none of these things is i pendent of any other.

Under prevailing conditions a question for consideration whether it is practicable to pay higher and higher prices for sh since there can be no guarantee that earnings will justify higher capital costs.

High Costs

When addressing you at Annual Meetings and commenting u matters which vitally affect the Shipping Industry and our C

ny, I have on a number of occasions referred to the manner which all costs have steadily risen during the war and post-war riods.

High costs constitute a problem of such national importance as justify critical examination by clear thinking people. Now that e Federal Arbitration Court has, in effect, accepted the view at the Australian economy can operate successfully under a forty-ur week—which in practice is considerably shorter—we must as community concentrate upon making those hours productively fective.

The question of high costs, as it relates to the Shipping In-stry, may be specifically referred to under the headings of:—

Administration.
Operating and maintenance costs, including all items of equipment and stores.
Stevedoring costs.
Cost of putting vessels through periodical surveys.
Replacement costs.

In the circumstances, a few comments and observations on the bject may be appropriate.

Although high costs affect Governments, industry and the in-vidual alike, there is unfortunately a tendency in many quarters overlook consequences, particularly whilst good seasons con-nue and the price of wool retains a high level.

It is one thing to diagnose the ailment of a country, or of a rticular industry, as being costs which are too high for economic fety, and another to cure it.

There is need for recognition of the fact that there can no nger be any guarantee that higher costs—whether in the form higher wages or in some other field—will automatically bring gher revenue to cover them.

Relief must depend upon an increase in the national output goods and services, and that output must be at diminishing ther than rising costs.

Full employment is not a condition which can be maintained by wishful thinking, but only by economical and efficient production.

Additional and more efficient effort will improve over-all productivity, and in time increase the real national income and assist in combating inflation.

Productivity per worker depends on one or more of three things:—

A correct attitude to work;
Amount of work performed, including application as well as time occupied;
The equipment available and skill in use of such equipment.

Industrial Relations

A great deal depends on the united statesmanship and foresight of the leaders of employers and employees alike. They should strive together to safeguard mutual and national prosperity.

The cultivation of improved employer/employee relationships is of paramount importance. Without good relationships and resultant team work Australia and Australians cannot expect to enjoy a full measure of real prosperity.

There is occasion for real understanding and co-operation, in which labour should play its full part.

Your Company

Notwithstanding the many difficulties to which I have referred, I am pleased to be in a position to refer to the sound position of your Company.

Staff

I again desire to express to all members of the staff, both ashore and afloat, my appreciation of the loyal service which they at all times render to the Company, and to the assistance which they give to me.

National Radiators Limited

The organisation is the largest radiator manufacturer in e Southern Hemisphere. Works in Melbourne and Sydney roduce complete radiator assemblies for installation in new ars, trucks, and tractors, as well as radiator replacement cores r sale to the motor trade, in replacing damaged and worn-t units.

A new factory of 12,500 square feet is in contruction at anterbury, Sydney, to replace leased premises.

Output of new and replacement radiators was comparable ith the previous year, despite reduced car imports and a re-ession in the motor trade generally.

Net tangible asset backing (book values in consolidated alance-sheet)—£1 pref., £8/6/2; 5/- ord., 8/2.

—Chairman's Address Overleaf

National Radiators Limited

The following address was given by the Chairman, Mr. H. B. Robbins, to shareholders at the Annual Meeting held on October 12:

The profit for the year is lower than for the previous year's operations, but considering the effect of import restrictions and the quiet tone of business, particularly in the motor trade, during the latter part of 1952, I feel that these results are a credit to the management of the company.

There are no significant changes in balance sheet items, apart from a reduction in stocks, which is reflected in the lower bank overdraft. As mentioned in your Directors' Report, the reduction in the value of stocks of material and finished goods has been due to a stock reduction programme and close control over the usage and ordering of material. There is now no difficulty in obtaining supplies of material and as there is at present a downward trend in the prices of non-ferrous products, there is a distinct possibility that our financial investment in this regard will decrease in the future.

The bank overdraft has been reduced by £51,338, but will tend to increase during the coming year due to additional investments of fixed assets, in particular the new factory building in Sydney and new machinery for both Melbourne and Sydney plants. Subject to your approval, it will also be increased by almost £20,000 by the payment today of final dividends.

Overseas Visits.

I am pleased to welcome back our Managing Director, Mr. J. O. Wilks, and our Assistant Managing Director, Mr. H. W. Robbins, from their recent trips overseas.

In business, nothing can replace adequately the personal touch, and we are indeed fortunate to have the personal contact that exists between these gentlemen and our many friends overseas. These, in some instances, extend over many years, and even if no tangible benefits had resulted from these trips—and I would hasten to assure you that there has been considerable benefit obtained—the renewing of these business friendships would alone have made the visits worthwhile.

The principal countries visited were the United Kingdom, the United States of America and Canada, and contacts there included, of course, the overseas manufacturers of vehicles for which we provide radiators in Australia.

Calls were made also on other vehicle manufacturers who have not yet availed themselves of the opportunity of buying radiators in Australia. I would emphasise that, even when the price of the Australian radiator is less than the cost of making the radiator in England and landing it in Australia, and the quality of the unit has also been proved to be equal in all respects to the English radiator, there are still other factors taken into account by United Kingdom vehicle manufacturers when determining their policy regarding the local purchase of radiators. As the buying policy of these companies and their representatives in this country are generally determined in England, you will appreciate that, in some cases, the only way of obtaining their business is to discuss this matter direct with the United Kingdom vehicle manufacturers, and even when this is done, a change in policy is sometimes a gradual process. We would emphasise that relations with these companies are most cordial, and we are hopeful that, before very long, they will join in the gradual trend towards buying radiators locally.

Visits were made to many radiator factories and also to our overseas suppliers of metals. New techniques in manufacture are being developed overseas, and experiments are being conducted in an endeavour to reduce the cost of manufacture. There were naturally some of these items that were "on the secret list," but generally speaking, we were very gratified indeed at the open-hearted way in which our overseas friends were willing to discuss and show our representatives the latest developments that were taking place. In some cases, we were told of various experiments that, although apparently promising, did not prove satisfactory on a production basis. This information, although apparently negative, could save our company money by preventing our duplicating such experiments. On the other hand, there have been some developments, both in production and research, which, when passed on to us, have proved of definite value. We might mention here that, so far as one overseas manufacturer was concerned, information was provided on an exchange basis in which we gave details of a technique we have developed in Australia, which was superior to that being used in this particular factory, and in turn received information which was of value to us.

One thing which did impress both of our visiting directors was the very hospitable and friendly way in which they were greeted overseas, and these cordial relations made their mission easier than it would otherwise have been. Personally, I am of the opinion that the company was particularly well represented by these two gentlemen, and that considerable benefit must accrue as a result of their visits.

Research.

The trend here and overseas is to improve the design efficiency of radiators to obtain the maximum benefit from every pound of metal used. This has the effect of reducing the size, weight and naturally cost, and in this way, the continuing competition between radiator manufacturers is benefiting the motorist. In order to maintain our position as the leading radiator manufacturers in the Southern Hemisphere, we are carrying out a policy of continuous research, experimental and developmental work.

Expansion in Sydney.

Since we have established a branch in Sydney, manufacturing operations have been carried out in leasehold premises at Belmore Road, Herne Bay. It was realised that these premises were not ideal, but we considered they would suffice during our estab ment period in Sydney, as we did not wish to purchase or freehold premises at peak prices ruling at that time. Last we purchased 1½ acres of land in Belmore Road, Canter located approximately a mile from the present premises, and has now commenced on the erection of a new building on this Initially, this will cover an area of approximately 12,500 s feet, but the building has been so designed that it will be a s matter to extend it as required. Early in 1954 we shall tra our production facilities from the leasehold premises at H Bay, and shall install additional plant to enable production greatly increased quantity of complete radiator assemblies for vehicles.

Road Transport.

Before concluding, I would like to emphasise the magni job that has been done and is continuing to be done in this co by the automotive industries, of which we are proud to be a Over the last few years in particular, a great amount of m and effort has been spent to establish not only tremendous p and buildings to produce the complete cars, trucks and tra and the multitude of parts required for them, but also the tr staff to operate these plants. This has been done at no co the community in general; in fact, the reverse is the case, as industries have directly and indirectly contributed many mil of pounds to this country's welfare. Last year's operations o major company alone, for example, netted the Government proximately £12,000,000 in income tax, sales tax and payroll In addition to this direct financial benefit to the country, we the incalculable benefit obtained by the employment of thousands of people in the automotive and allied industries.

There are, however, two major complaints that I have to regarding road transport:

First of all, the revenue collected by the Government petrol tax is not all used, as was originally intended, on mai ance and improvement of our roads. In fact, the amount spe roads throughout Australia is less than 60% of the revenue lected from petrol tax alone.

My second complaint is that we do not make full use o potentialities of road transport. There are many instances in v it is the most economical method of moving goods from pla place. This is mainly because in these instances, handling of is reduced to a minimum, in many cases goods being loaded di into trucks in the factory and being unloaded directly from trucks at their destination, thus avoiding the multiple handli goods necessary when any other means of transport is use addition to this, an indirect saving is often possible due t fact that there is less risk of damage and cheaper packing be used.

In those circumstances where road transport is cheaper other methods of transport as operated at present, there is reason why we should make maximum use of these benefits stead of this, efforts are being made by many authorities to mise its use by the imposition of excessive road taxes and by hibiting the use of road transport under certain circumsta where it competes with Government monopolised transport.

Each day many man hours are spent in deciding whether transport will be allowed to cary certain goods from one pa lar place to another, or if they shall be carried by another m of transport. I contend that there is only one good way o ciding this. Let the person who is going to pay for the tran of the goods decide which method he wishes to use. Why s we deliberately increase our cost of living by preventing th of the most efficient means of transportation, and by preve a reasonably free interchange of competition to ensure that ing methods of transport become more efficient.

The importance of this to the community can be appre when we realise that practically everything we use has been t ported, not once, but several times in the course of manufa and distribution. If a detailed analysis were made, it wou found that a considerable proportion of the cost of our needs is directly linked with transportation, and if we are si in our desire to reduce the present high cost of living, we assist our aims by ensuring that we use the most efficient m of transportation for each particular task, and there is onl way of doing this—that is, to allow freedom of choice to the son sending the goods.

The company manufactures twist drills, taps, stocks and dies, and other cutting tools which are essential requirements of the engineering industries. Many of the products made are not manufactured elsewhere in Australia. Despite competition from England, West Germany and U.S.A., substantial exports continued during the year.

The following report by the Chairman, Mr. P. F. Fisher, was circulated to shareholders with the Annual Accounts:

Since our last meeting many changes have been witnessed in our business activities. I can only describe the past year as a difficult one, but the results, I am pleased to state, are satisfactory, and I would like to thank all of our customers, employees, agents, as well as my co-directors, by whose loyal support this success has been made possible.

At the beginning of the year sales reached extraordinary heights, aided, to some extent, by the price increase which was announced for our products during February, 1952. Then quite suddenly, following the curtailment of government spending and the slowing up of major developmental projects, cancellations started to come in for outstanding orders. With our factory geared for high production, merchants' shelves filled rapidly, and neither they nor we had any alternative but to reduce purchases and production respectively.

However, with the improvement in Australia's overseas payments position there has been a noticeable easing lately of the tight money conditions which existed during the closing months of 1952, and it would be reasonable to expect favourable repercussions within our industry. But we cannot lose sight of the fact that the extent to which Australian manufacturers will participate in business offering will largely depend upon our efforts to keep prices down to at least a competitive level with overseas industrial countries.

Comparative Wage Costs.

Efforts to cut costs are largely nullified by the continued rise in the basic wage in Australia. In this regard I was extremely interested to read in a recent issue of the Institute of Public Affairs "Review" that the hourly wage rates in Australia for male workers average about 8/-. Average rates for British workers are 3/10 (Sterling) or about 4/10 Australian currency. Hourly wages in Australia have increased 149 per cent. since the end of the war, compared with increases for Britain of 59 per cent. and for the U.S.A. 71 per cent. "Review" concludes by saying that a cost disparity of these proportions creates a fundamental out of balance situation in the economy which suffers from it.

We can see, therefore, that provided the goods manufactured in Australia can be sold, it really does not matter to what level wage rates rise, but the moment our costs are greater than the landed in Australia costs from overseas suppliers, we must face up to the resistance we will experience from the ultimate consumer.

Your Company is experiencing serious competition from England, Western Germany, as well as the U.S.A., but I am very grateful indeed to our distributors for the loyalty they have displayed in giving preference to the Australian product over the imported article. Although I mention this competition within our own shores, it is pleasing to record that we continued to enjoy a substantial export business during the past year, and this must reflect considerable efficiency in our factory to make such sales possible.

A Review of the Profit and Loss Account.

Sales for the year were £68,089 lower this year than for the previous year, when we reached the record figure of £821,359. This decrease of approximately 8.3 per cent., whilst disappointing, would appear to be in line with the general trading conditions existing during the greater part of the year, and under these circumsts may be viewed with some degree of satisfaction.

The net profit before taxation has decreased by £5,359 £69,871 to £64,512, and is mainly due to the drop in sales. ever, there was a slight fall in the current market value of raw material on hand at the end of the year, and full prov has been made in the accounts to cover this movement. In mating our tax liability we have based our calculations or current rates for a public company, although we do look for to some relief from taxation in the Budget for 1953-54.

The dividend which your Directors recommend to shareho is at the same rate as for last year, but on account of the £5 of new capital which was issued and fully subscribed at th ginning of the year, plus additional shares allotted to empl during the year, the amount required for dividend is much gr being £21,783 compared with £16,497 for the previous year.

After allowing for tax amounting to £407 overprovided i accounts for the previous year, the balance of the Profit and Appropriation Account after payment of the proposed dividend be £123,996, or an increase of £14,036 over the balance ca forward at the beginning of the year.

The Balance Sheet.

My earlier remarks explain the rise in shareholders' f from £274,935 to £341,829. The general liquidity of the Comp affairs at June 30 last is very noticeable, for despite the fact rent assets decreased by £69,529 to £369,307, you will note current liabilities have been reduced by £144,339 to £98,605, will refer to this reduction in a later part of this report.

Although stocks on hand show a decrease of only £1 actually there has been a considerable change in the compos of the stock. Finished goods now assume much greater im ance than in the past. Service to our customers depends upo ability to give prompt delivery, and we are watching this a of our business closely. However, it is not until we pause think of the vast range of tools we supply to the engineering that we fully realise our obligations in this regard.

The amount owing by debtors is down by £51,707, which p to a lower turnover as well as an improvement in the av credit duration of outstanding accounts. However, the bi variation in our annual figures is in the reduction of cu liabilities to £98,605. The additional capital we have at our posal has materially assisted in this matter, but the reduce mand, coupled with the improved delivery position for sup makes it no longer necessary to keep such large stocks of material and factory supplies on hand.

With reference to fixed assets, there has been comparat little capital expenditure during the year. Freehold proper now valued at £32,887, compared with £34,319 at the beginni the year. A small adjustment has been made to the value o Carisbrook Road property and some land surplus to the pany's requirements has been sold.

Shareholders.

In my last report I referred to the sale by McPherson's Li of a parcel of shares to the general public. Although McPher Limited still hold a majority of shares in this company, it teresting to note that at the time of writing 653 na wer

Register of Members, excluding the holders of "E" Stock, of h there are 198.

Staff and Employees.

During the year it was necessary to retrench a large number employees, many of whom were very skilled operators. This n I would like to assure everyone was taken only after full careful deliberations. My Directors were fully aware that y retrenched employees would have to leave Maryborough and he effect such action would have upon the town. However, the ssion in the trade was such that prompt action was impera- if the company was to continue to operate profitably. To the enched employees it is the desire of my fellow Directors that nvey to them their sincere regrets for the action they had to , and they do trust all have since obtained suitable employ- t elsewhere.

To the remaining employees, I thank them for their efforts during the year, and we look forward to more stable employment conditions during the coming year.

The Future.

Since the close of the financial year business has been better than for some months. However, it is very doubtful if production will return to its former high level, but I am convinced that by greater efficiency in the factory and by curtailment of expenses, the profit earning capacity of the company can be maintained.

Your company is now better equipped than ever to serve the requirements of Australia's industries, and with the past achievements as a stepping stone to our future prosperity, I look forward with confidence to our continued success.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £11/14/-; 10/- ord., 12/-.

The following address was given by the Chairman, Mr. J. O. ith, to shareholders at the Annual Meeting on October 7:—

Our reserves and undistributed profits have risen by £146,495 to 5,594.

After providing for depreciation on fixed assets (£13,748) the net fit of the trading companies for the year to June 30, 1953, is 5,845. This result compares most favourably with the 1952 profit £211,038 and has been made possible by an economic buying policy consequent improvement in our stock position, whilst improving turnover of the previous year.

Reference to our Consolidated Balance Sheet shows a reduction stock from £1,282,762 to £765,824, and is the direct result of the oduction by your Directors in July, 1952, of the Retail Inventory thod of Stock Control.

It is confidently anticipated, and this has been borne out by ults since July 1, 1953, that turnover will improve again in the rent financial year.

Dividend.

Your Directors recommend a final dividend of 6% on ordinary ck; an interim dividend of 4% was paid in April, 1953, making in 10% for the year.

Staff Provident Fund.

The contribution by the trading companies on behalf of employee mbers was maintained and payment made to the Trustees of the ff Superannuation Fund.

Policy.

In line with the Directors' progressive policy of expansion, new res were opened at Oakleigh (July, 1952) and Moorabbin (March, 3).

Both Stores have fully justified your Directors' faith in these areas and are now firmly established as valuable additions to the Company's business.

During last month a very modern Store was opened at Moreland, which will further increase P.P.L. Service throughout the Metropolitan area. Negotiations are also in hand to establish a Branch at Geelong, Victoria. These new Stores will bring the total number of Branches to thirty (30).

Price Control.

I mentioned in my last report that your Board was opposed to the principle of Price Control on the basis that the buying public are best served by healthy competitive trading. Regrettably, Price Control is still with us, and whilst it remains we cannot give the benefits to the lower and middle income buyers that we would desire. These benefits can only come if our merchandising techniques are flexible and competition is keen.

Appreciation.

An interesting matter associated with the excellent results achieved is that your Managing Director, Councillor Maurice A. Nathan, has for the last nine months been on a business trip abroad making himself acquainted with the latest phases of our Trade in many other countries. During his absence, Mr. Graham E. Nathan has carried out the duties of Managing Director with the ability and enthusiasm that your Board of Directors has learned to expect, and I would like, on behalf of the Board, to extend to him our congratulations on the very great success that has attended his efforts.

I am proud to report that our chief executives and employees have continued to serve the Company in a loyal and efficient manner. Without their very valuable support, the continued prosperity of this Company would not be possible.

Lanes Motors (Holdings) Ltd.

Reg. Office: Canberra. **Melb. Register:** 89 Exhibition St. **'Phone:** C. 10490. **Directors:** L. J. Newton (Chairman), H. J. Lane (Manag. Director), L. Newton, F. E. Bunny, W. B. Thomas. **Auditors:** R. H. Shackell & Son.

Year ended June 30, 1953. Meeting October 16, 1953.

Import restrictions caused a fall in sales, and profit of £260,594 was less than half that of the previous year. However, the usual dividend of 20% was more than twice covered.

In his address to shareholders at the Annual Meeting on October 16, the Deputy Chairman, Mr. H. J. Lane, said:

Since the Accounts of Lanes Motors (Holdings) Limited only bring to credit such amounts of dividends as it receives from its wholly-owned subsidiary, Lane's Motors Pty. Ltd., I propose to refer to the Consolidated Accounts and to the trading activities of Lane's Motors Pty. Ltd.

Import Restrictions

While the policy of the Commonwealth Government, in its restriction of imports which came into effect early in 1952, caused many difficulties, there can now be no doubt that the action taken was economically sound and contributed largely to the stability in business generally that now exists.

No criticism in this regard is intended, but it so happened that the impact of these restrictions was particularly severe on your Company since, while substantial stocks existed on June 30, 1952, they were, as regards your Company disproportionate in relation to the demand that existed.

To illustrate this, the value of stocks in hand and in transit as at June 30, 1952, as detailed in the 1952 Accounts and after providing for a stock fluctuation of £100,000, amounted to £1,405,317. The similar item in the 1953 Accounts, again after providing for the £100,000 stock fluctuation provision, shows as £525,656, a difference of £879,661. Of the £525,656 referred to as stock in hand and in transit as at June 30, 1953, more than 50% consisted of stocks in the spare parts division.

Trading Conditions

It is generally conceded that the "boom" period of 1951/1952 is over and that business has resumed a normal level. The still increasing wages and operating costs are, however, still the cause of much concern requiring continual diligent control and management. Your Company is well situated to maintain its place in the industry and the easing of the import restrictions, which became effective in April, 1953, and the subsequent increases in the permitted imports granted in July and October provide welcome relief. The results to date for the current year have been satisfactory, the car and commercial vehicle units which your Company distributes remain in strong consistent demand.

Balance Sheet

During the year shareholders' funds increased by £14 the relative figures being £1,707,481 in 1952 and £1,851,457 in The total of the reserves and undistributed profits as set o the Accounts now stand at £1,196,457.

During the year your Board considered it advisable to for a short period, some of its temporarily surplus funds and accounts for the increase in the item, "Loans to Companies o on the Stock Exchange," by £74,895 to £261,000. In add £200,000 was loaned for a short fixed period to a Victorian Government Instrumentality guaranteed by the State Gover of Victoria.

Premises

During the period under review, the showrooms of Lane's M Pty. Ltd., situate at 89 Exhibition Street, Melbourne, wer decorated in a modern design and now provide an up-to-date quate setting in which to display the Company's merchandi

Similarly, the Freehold premises of Automobiles Pty. situate at 20-28 Latrobe Street, Melbourne, were, prior t occupation and re-commencement of operations in May, altered and re-equipped and the latest modern design of rooms and spare parts department installed.

In 1952, a provision of £57,500 was set aside for additio the service station of Lane's Motors Pty. Ltd., Dorcas Street, Melbourne, and other alterations. This work is now nearing pletion and in addition a modern, fully equipped spare part accessories department has been installed.

Staff

I would like to extend to the whole of the Staff, all of have rendered loyal and conscientious service, the sincere t and appreciation of the Directors. Your Directors are very mi of the work and efforts of all personnel of the Company a will be of interest to our stockholders to know that the amounts contributed by the Company over the years to the Superannuation Funds now totals £54,800.

I desire on behalf of the Board, to express to all our De our appreciation of their co-operation during the year. W preciate the fact that their businesses have, during the year, affected by shortages of stock and we hope with them, that very near future this situation will be alleviated.

A man was trapped under this burning tractor!

At the Fairfield Municipal Council's Garage a tractor caught fire. There was a mechanic working underneath the tractor — the garage was full of other vehicles.

In a flash, Arthur West the garage superintendent saw what had happened. In seconds he had pulled the Simplex extinguisher off the wall and directed the jet of smothering foam at the fire.

The mechanic who had been trapped under the tractor was burned about the arms but his life was safe. No other car or truck was harmed — thanks to the blanketing foam of the Simplex extinguisher. Such fires cannot always be avoided but they *can* be stopped, surely and safely, when Wormald Brothers "Simplex" extinguishers — are always ready—are close handy.

A "Simplex" foam extinguisher put out the fire

"Simplex" 2-gallon Reversible Foam-type Fire Extinguishers are specified for risks from petrol, oil, tar, grease, paints and varnish, for use on fires difficult to put out and where a sudden blanketing effect is likely to be needed.

One of many types supplied by

WORMALD BROTHERS SYSTEMS

for protection against fire

Fire Protection Engineers Since 1889, with offices and works throughout Australia and New Zealand

WORMALD BROTHERS INDUSTRIES · WB · THROUGHOUT AUSTRALIA & NEW ZEALAND

Ralph McKay Limited

In his address to shareholders at the Annual Meeting on September 16, the Chairman, Mr. R. McKay, said—

The net profit of £46,479, after providing increased amounts for taxation and depreciation for the twelve months, is an improvement on last year's figure of £43,855, and your Directors previously expressed opinion that dividends could be sustained on the increased capital, has been realized.

As on previous occasions, the expenses of the share issue made during the year, amounting to £2,812, have been written off, and your Directors now recommend payment of a final preference dividend of 3%, making a total preference dividend at the rate of 6% for the year, and a final ordinary dividend of 10%, making a total ordinary dividend at the rate of 20% for the year ended June 30, 1953. The final dividend, if approved, shall be payable on September 30, 1953.

Steel Imports

During the post-war years serious shortages of many sections and plates curtailed production and prevented manufacturers from supplying the full requirements of the nation as had been doing. Considerable orders were placed overseas—in instances for quantities in excess of reasonable requirements large irrevocable credits were necessary to finance these actions.

Around the 1952 period the unexpected fulfilment of these standing orders by suppliers who had greatly expanded produ to meet post-war shortages, and who found other outlets appearing, caused all-round embarrassment in Australia. Inde stocks—in many cases purchased at prices in excess of thos local products—reached alarming proportions and many were pelled, by an acute shortage of Australian funds, to cancel placed with Australian manufacturers, and/or request delaye liveries.

At the same time the supply of local raw materials impr many items becoming readily available, and manufacturers in a position to produce to capacity for the first time in years, without a market for their products.

This combination of circumstances caused serious repercu in Australia, particularly in the steel manufacturing industry many firms, large and small, had to meet the situation by va degrees of retrenchment, including reduction of staffs.

It was fortunate that these conditions had been, in some me anticipated by the Board and Management of your Company as a result the storm is being safely weathered, and this sight is reflected in the result of the year's trading now before

Prospects

I am pleased to inform you that the prospects for the c year are still encouraging, and there is reason to believe tha demand for the company's products, as well as the supply o materials, will be such during the period ahead as to wa confidence in the progress of our undertaking.

A number of new lines, including wide base rims for tra not previously manufactured in this country, are now being duced in substantial and increasing quantities. We are als ceiving enquiries for other new items which are being ear considered by the management.

The Company has established an excellent reputation for q and service, and every care is being exercised to ensure tha standard is maintained, and where possible improved.

Extensions

Substantial extensions to the factory are nearing compl These have been delayed due to shortages of cement and r iron which are still rigidly controlled.

Industrial and Staff

During the year production was unaffected by domestic i trial disputes, and power shortages and restrictions have countered by the operation of the company's auxiliary power during rationed periods.

I am pleased to report that the relationship between Dire Management and all employees is most satisfactory, and I take this opportunity of again expressing my thanks and app tion, and that of the Directors, for the continued loyalty of and employees during the past year.

Formed in December, 1951, the company has three wh owned subsidiaries which operate the following quarri points well placed in the metropolitan area—

Fowler Quarries Pty. Ltd.—North Essendon.
Regal Quarries Pty. Ltd.—Braybrook.
Rock Quarries Pty. Ltd.—Fairfield.

The fourth subsidiary, Reid Bros. & Reid Pty. Ltd., distributes the output, also sand and building materials.

Although sales decreased in the second half of the year, current orders indicate a return to normal trading during the present year.

In addressing shareholders at the Annual Meeting on September 1, the Chairman, Mr. C. H. Reid, made the following remarks:

The year's operations resulted in an aggregate net profit of £5,450 after providing £27,796 for depreciation of fixed assets and amortisation of quarry lands, and £34,624 for taxation.

The lower net profit as compared with last year is due to a decrease of 8% in sales in conjunction with a reduction in the selling price of our products.

The amount provided for taxation in the above figures is based on the rates operating before the Commonwealth Budget was announced and in consequence of the reduced rates since fixed, there will be a substantial balance over provided.

Subsidiaries

Before I formally move the adoption of the Accounts and the Report of Directors and Auditor, I propose briefly to review the activities of the Subsidiary Operating Companies.

Reid Bros. & Reid Pty. Ltd. as you no doubt know act as the sole selling and distributing agents for the three quarries in addition to selling sand and other building materials required by users of our quarry products.

The Company's large fleet of trucks has been further increased by additional new trucks purchased during the year and all units have been maintained in first-class working condition.

Fowler Quarries Pty. Ltd., which is situated at North Essendon, improved on the high production output of last year. Additional new and greater capacity crushing plant of the latest design and layout which incorporate the most modern overseas improvements are being installed at this quarry. This will be co-ordinated with the existing plant and will considerably increase output to meet modern trends and demands. Progress of the new plant installations and constructional work is well advanced.

Regal Quarries Pty. Ltd. is situated in Braybrook and almost the whole of its output is used in areas in close proximity to the quarry. The plant and machinery has been maintained in good working order and is operating efficiently.

During the year the Company purchased an additional area of twenty acres of quarrying land adjoining the existing quarry site. This will add considerably to the life of this unit.

Rock Quarries Pty. Ltd. which is situated in Fairfield is operating satisfactorily and serves mainly to supply the requirements of the eastern districts. Equipment added at the quarry during the year has resulted in greater efficiency.

Future Prospects

The decrease in sales above referred to occurred in the latter half of the financial year. The Directors are pleased to report however that the volume of current orders is such that they feel justified in anticipating a return to normal trading conditions during the present financial year.

Staff

Before closing I would like to take this opportunity of expressing appreciation and thanks to the staff and employees of the Company and its Subsidiary Companies, also to express the appreciation of the Board, and I am sure, the shareholders for their efforts during the year.

In his address to shareholders at the Annual Meeting held on September 23, the Chairman, Mr. A. T. McKay, made the following remarks:

A perusal of the Annual Report and Balance Sheet which your Directors are pleased to present today will reveal that the past year's trading has been conducted on a satisfactory basis.

Normal is a difficult word to define in relation to trade and business conditions, but in the year ended June, 1953, we have seen a situation nearer to normal in the generally accepted sense of the term than has been the case for many years.

Competition has become more evident which is a healthy sign. Factory efficiency has advanced with the experience in the use of the new machinery that has been installed.

Costs have continued to rise, and although the increases have perhaps been not quite as steep as in the past, they have been sufficient to remain a major factor requiring the constant attention of the management.

The final units of machinery envisaged in our short term expansion policy have now been installed and tested, and have made their contribution to our production for the year under review.

We can now look with pride on a modern and versatile plant housed in convenient and suitable premises and manned by skilled and efficient operatives. With the demand for our products continuing at a high level, and by means of this modern plant and increased efficiency, we have been enabled to increase our turnover again. These factors have permitted us to meet and absorb the rising costs while still maintaining the reasonable and lower net profit percentage to sales that was in evidence last year.

Turnover may not be as high during the current year. The cost of our raw materials has shown a slight downward trend and this will naturally affect the final price of our finished products. Indications are, however, that volume of turnover will be maintained and our net results prior to tax should be on a comparable basis.

Operating Results

Our net result for the year under review is, as previously stated, satisfactory. Our available profits of £42,869 after tax will allow us to continue the payment of total ordinary dividends of 10%-5% interim and 5% final—at the same time taking the prudent step of strengthening our reserves by the transfer of £5,000 to general and £3,500 to contingency reserve. This will leave £7,621 for the year carried in appropriation account which now stands at £20,961, with total reserves at £58,722.

You will note that stock has been reduced during the year from almost £180,000 to £112,542 with a consequent improvement in our liquid position. This reduction is a reflection of better availability of raw materials thus removing in part the necessity to carry too large stocks of paper and board.

New Warehouse

The storage and warehousing of our stocks has long bee problem and in the past this has been carried out with consider inconvenience in various premises under leasehold or tenancy rangements. At the close of 1952 we were fortunate in secu freehold premises in Port Melbourne which were eminently suit both in convenience of situation and area of storage space. are already feeling the benefits deriving from the more effec warehousing of the bulk of our raw materials under one roo a convenient location.

Overseas Visit

In conformity with our policy of keeping pace with mod developments, our Director and General Manager, Mr. H. R. Ba has been overseas—the United Kingdom, the Continent and U.S.A.—since March of this year. Regular visits such as play a leading part in keeping your Company in the forefront the Australian printing industry.

Capital Issue

I am pleased to comment again on the fact that new fu amounting to £30,310 were introduced during the year, and this issue on a 1 for 7 basis on ordinary shares closed over scribed. These funds have been and will continue to be well t in the business and it is gratifying to note that increased earn adequately cover the new capital and justify the faith of Directors and the subscribers at the time of the new issue.

It is also of interest that the percentage of our profit a tax to total shareholders' funds has advanced slightly and same may be said of our profit, after tax and preference divide expressed as a percentage of ordinary share capital. This indic that the dividend earning capacity of the business as anticip in our original prospectus is being well maintained despite impact of higher company taxation during the intervening ye

Taxation

This last comment leads, of course, to the recent Federal Bud which announced general reductions in many fields of taxat The lower company tax will be of great assistance to our comp in helping to ensure the continuation of our policy of building reserves against contingencies and for future development capital replacements, while at the same time paying satisfact dividends out of current revenue. The reduced taxation gener should give an impetus to business which should beneficially af the affairs of this company.

Staff and Directors

Before closing, I would like to pay a sincere tribute to staff. In the factory and in the office we have a team of pe

who, by their enthusiasm and the application of their skills in varying fields, have contributed much to our past progress and made possible the satisfactory results of this year.

My co-directors have worked together well to form a most able Board of Directors and the effectiveness of their efforts is reflected in the continued progress and present position of the Company. However, the expanding scope of the business over the past few years has made it advisable to increase the number of Directors. It is therefore desirable that two additional Directors be appointed in the near future.

Our results for the year have been labelled with the word "record" which may be true in the light of actual figures. Your Directors prefer to regard it as a satisfactory performance achieved in a year of transition and to note that the transition period has not yet passed. Various circumstances may lead to better results or, on the contrary, our figures in the immediate future may not equal those just established. But, from the tone of my remarks and from the facts and figures presented to you in the Annual Report and Balance Sheet, you will agree that we can face the future with confidence in the anticipation of steady results to the benefit of the Company, its employees and its shareholders.

*Incl. profit on sale of fixed assets (1953, £20,277; 1952, £2,354).

Operating through subsidiaries, the company now controls a chain of 58 retail stores in Victoria, South Australia, New South Wales and Queensland, handling in the main women's clothing, manchester, dress materials and millinery. The company also has a large mail order business.

Three new branches were opened, and after the close of the year a general store at Yallourn was taken over from the State Electricity Commission.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £5/16/1; 10/- ord., 10/5.

In addressing shareholders at the Annual Meeting held on September 29, the Chairman, Mr. P. Rockman, said:

You will observe that the consolidated profit for the year ended June 30, 1953, amounted to £120,974 after providing £116,564 for income tax and £28,936 for depreciation, as compared with consolidated profit for the previous year of £110,168 after providing £84,785 for income tax and £13,308 for depreciation.

The above provision of £116,564 for income tax was made prior to the reduction announced in the Federal Budget on the 9th of this month, and as a result there will be a substantial amount to add to the carry forward of £94,206 appearing in the Consolidated Balance Sheet.

Your Directors are pleased to be able to present these improved results which were achieved despite much keener sales competition experienced during the year, restrictions on imports and continually rising costs.

The sales during the year were again in excess of the previous year's figures demonstrating the success of the company's policy of steady expansion and consolidation.

New Branches.

As mentioned in the Directors' Report three new branches were opened during the year at—

Liverpool Street, Sydney;
Bondi Junction;
Chapel Street, Prahran,

respectively, all of which are operating successfully.

The Company has continued to make essential alterations and improvements to modernise and make more attractive the larger of its stores.

In addition, improvements have been made to the leasehold premises which were occupied by the Company in October, 1952, as administrative offices and warehouse, a project which is proving most beneficial to the company.

The Directors' report makes reference to the properties acquired during the year, but I would like to particularly mention the Yallourn General Store, the stock, fittings and goodwill of which were purchased from the State Electricity Commission at a satisfactory price, and your company commenced trading operations there on July 1, 1953. Although the venture into a general store is new to this company, the results so far achieved have been satisfactory, and your Board is confident that the venture will prove a profitable addition to the company's chain of stores which now totals 58.

Dividend.

I would also like to direct your attention to the recommendation which the Directors have made regarding the dividend.

You will observe that an additional 2% as a bonus, making a total of 10% for the year is recommended, and this, together with the preference dividends, will absorb £89,250 out of the year's profit, leaving a balance to be added to the general unappropriated profits which, including the capital reserve referred to in the Directors' Report, now totals the sum of £115,532.

Staff.

In conclusion, I wish to pay tribute to our staff and all our employees. It is their loyal work and co-operation which has contributed so largely to the year's result. I wish to express on behalf of the Directors thanks for the support given. Shareholders, I am sure, would be glad to know that as a practical expression of our appreciation, further amounts have been allocated to the staff superannuation and retiring funds.

Siddons Drop Forgings Ltd.

Manufacturers of Forged Hand Tools and Padlocks.

Reg. Office: 28 Elizabeth St., Melb. **'Phone:** MF 3629. **Directors:** R. Siddons (Chairman and Manag. Director), E. S. Petrie, G. Jeffery, J. D. Morrison, J. R. Siddons. **Auditors:** Watson, Niven & Co.

5th Year ended June 30, 1953. Meeting September 16, 1953.

Despite increasing competition, sales increased during the year, and parent company profit was £4,000 higher at £33,944, out of which a dividend of £22,750 (10% unchanged) was paid.

To finance new plant and buildings at West Heidelberg, the company raised £52,500 extra capital during the year. The new subsidiary — Ramset Fasteners Pty. Ltd. — operated from July 1, 1952, and results were very satisfactory.

Main production lines of Siddons are spanners (open end, ring, socket, tappet, ignition, etc.) and padlocks, marketed under the brands "Sidchrome" and "Sidco" respectively.

In addressing shareholders at the Annual Meeting on September 16, the Chairman, Mr. R. Siddons, said—

In firstly confining my remarks to the activities of Siddons Drop Forgings Limited, I am pleased to report that trading conditions have been buoyant and the turnover again shows a substantial increase for the period.

Nett Profit

The nett profit for the year ended June 30, 1953, amounted to £60,242, and against this figure a taxation provision of £26,298, has been made, which was calculated before the reduction in taxation rates announced in the Commonwealth Budget.

Taxation in its various forms that industry is called upon to pay, makes it exceedingly difficult to maintain development, to replace plant and machinery and in many other ways counter competition which is daily increasing particularly from overseas suppliers. However, by granting some reductions in income tax the Government has faced up to the reality that to encourage development and increased productivity there must be relief from these heavy imposts. I am sure that this encouragement in tangible form will give added stimulus to industry.

In addition to this, with costs still rising, I would like to underline a comment that I made 12 months ago, in that managements' prime responsibility today is to organise to offset increased costs by improved manufacturing efficiency, and so keep their products priced at a figure at which the buying public can afford to purchase. I am pleased to report that insofar as your Company is concerned your employees have, by their loyalty and co-operation with the management, succeeded in cancelling increased costs by efficiency and so have defeated the necessity to increase our prices during the past 12 months.

New Issue

As indicated at our last Annual Meeting, in continuing our expansion programme the Directors had decided to raise additional capital of £52,500. Almost the whole of that amount was subscribed by existing shareholders and the Directors acknowledge the confidence expressed by the shareholders in that way. As indicated in the printed Directors' report, only part of the new capital had been utilised by June 30, 1953 and I trust that the schedule of the provision and disposition of funds shown therein proved informative to shareholders.

Buildings

I am pleased to report that our present building programme at our Heidelberg works is now complete. In addition to the new factory section and a spacious steel store, we now have a further brick building of 3,600 sq. ft. which in addition to housing the Company's laboratory, drafting section, time recording and control offices, provides a most satisfactory amenities section for the Company's employees. This addition became essential particularly for the provision of light meals as our factory is some distance from any shopping area.

Stock

This year our stock on hand shows a decrease of approximately 10% on last year's total. With improved availability of materials, there is not the same necessity to order imported materials in such large quantities as previously—this is greatly helped by the fact that the Australian Rolling Mills are more adequately able to supply our requirements. The matter of purchasing is being closely watched by our staff.

Financial

Particularly during the last half of the financial year, there is evidence that payment of customers' accounts has improved, and notwithstanding the increase in sales, the actual Trade debtors have decreased as compared with last year.

With the constantly rising costs it is becoming more and more necessary to closely scrutinise all forms of expenditure. Whilst our accounts undoubtedly show increased expenditure we can report that our improved turnover almost completely offset the increases, and without assistance of increased selling prices.

Developmental

Included also is very heavy expenditure in the development of extending our range of tools, among which is a series of sizes of adjustable wrenches, the manufacture of which has not been attempted before in Australia except by Lithgow Small Arms factory during the war as a war emergency production.

Now that nickel is becoming available it is our intention to revert to a nickel chrome finish on all our products. We have developed and had built in Melbourne what we consider a most modern and efficient fully automatic plating plant which will be operating in our works within the next 2 to 3 weeks. To give some conception of this development, the cost to the Company to have imported anything comparable would have been not less than £20,000. It would not be prudent to divulge what the Company has saved, suffice it to say it has been considerable. It has also been a very big development, and one of which we are justly proud.

Appropriation and Reserves

Whilst we can look forward to future trading somewhat more confidently than we could some 12 months ago, with the many problems of increased costs and competition confronting us, your Directors have felt justified in continuing to consolidate the financial position of the Company as much as they are able. As evidence of this, what we consider a necessary provision has been made by appropriating out of this year's profits a further £10,000 to General Reserve, thus raising the reserve account to £40,000.

After payment of the proposed final dividend, a balance of £14,622 will be carried forward in the Appropriation Account.

Sales and Distribution

The Company's products continue to be well received, and it is gratifying to have the wholehearted support of the motor and

hardware trades in the merchandising of our goods. In the past, our sales in New South Wales have been conducted on an agency basis by Messrs. White & Petrie Pty. Ltd., but in March of this year, we took over the Sydney office of that Company, which enabled us to establish our own sales office in that State. We have secured satisfactory premises comprising some 6,000 sq. ft. at 147-149 Broadway, Sydney, a very convenient and central location for all concerned. By this development we should be able to give added service to both "Sidchrome" and "Ramset" customers.

Subsidiary Company—Ramset Fasteners (Aust.) Pty. Ltd.

It is naturally pleasing to report that after its first year of trading Ramset Fasteners (Aust.) Pty. Ltd., has been able to show a net profit of £5,082 from which a taxation provision of £1,060 has been made.

Perhaps the most gratifying aspect of this project is the excellent reception accorded Ramset equipment throughout the Commonwealth of Australia and in other countries. The applications for using this tool and its accessories are almost unlimited, and they are being utilised on most construction work taking place today.

Manufacturing

With the increasing demands for supplies we have had to develop the manufacture of tools and pins very considerably. We are now well advanced in tooling up for the improved heavy duty model of which we have been able to import a very small quantity, and we hope to be in production in approximately two months time. This will open up another large avenue of sales in heavy constructional work—the few tools we have been able to import are doing a big job of work in such as the Kwinana Oil Refinery in course of construction in Western Australia, the Aluminium Commission of Tasmania, and other like projects. I would like to pass a word of compliment to Mr. J. Siddons and his staff who have been solely responsible for the success to date of this subsidiary, and we wish and expect even greater success in the ensuing 12 months.

Sales

During the past year, sales and distribution offices have been established in Sydney, Brisbane and Adelaide, whilst leading agents have been appointed to cover the West Australian and Tasmanian territories.

Each month reflects increases in turnover, and it is interesting to note that sales for the January-June period were more than double the total for the first six months of the financial year.

In summing up the situation, with the gradual stabilising of economic conditions generally, and particularly if we are blessed with another favourable season and our primary production values hold, I feel that in both organisations we can look forward to the future with confidence and with the need for continued foresight, energy and initiative I can assure you that we will not be found wanting.

Staff

I would offer thanks to my co-Directors for their assistance, also to the Companies' executives, staff and employees for their continued support throughout another year. I cannot speak too highly of the spirit of loyalty that exists between all members of this organisation.

Also I would like to thank the Company's Auditor, Mr. W. B. Watson and the staff, Watson Niven & Company for the efficient manner in which they have carried out their work.

Smith Mitchell & Co. Ltd.

Maltsters.

In his address to shareholders at the Annual Meeting, the Chairman, Mr. C. R. Smith, reported a record profit and good future prospects. His address reads:—

The profit for the year was £83,556, which exceeded last year's all-time record, and I hope that shareholders are pleased with this result. It will be recalled that capital was increased during the year and further augmented by a loan; the expenditure of these funds on buildings and plant extensions enabled us to maintain a higher sales volume than in the preceding year with a resultant increase in profits.

Although your Directors would have liked to recommend an increase in the final dividend, it was decided to conserve finances in view of the heavy capital outlay during the last two years, and maintain the final ordinary dividend at 3½%. This requires £10,549, which, together with the 3% preference dividend of £1,800, absorbs £12,349.

Freehold Revaluation.

I would draw your attention to an item appearing in the Balance Sheet for the first time, that is, Fixed Assets Revaluation Reserve. Some time ago the Directors had the Company's freehold properties in Richmond revalued by a sworn valuator, and an amount of £130,813, being the surplus arising from this revaluation, was placed to the credit of this account.

Prospects.

Our new plant, which is the most modern in the Southern Hemisphere, has been in operation for many months and is giving every satisfaction. All units are in full production to satisfy a steady home demand for malt and, in addition, we have been successful in securing substantial overseas business. The prospects for the future are therefore extremely bright.

Consequent upon good rains, both Victorian and South Australian barley crops have had a fine start and provided weather conditions are favourable until the harvest, another good crop seems assured.

In conclusion, may I thank the staff and employees for another year of excellent service.

Tom Piper Ltd.

Food Canners.

Reg. Office: 192 Pt. Nepean Rd., Gardenvale, Vic. **'Phone:** XM 2881.

The following remarks were made by the Chairman, Mr. A. W. Spooner, at the Annual Meeting on September 25:—

Copies of the Balance Sheet and Accounts have already been forwarded to the shareholders, and you will see that a net profit of £57,759 has been earned for the year, after providing £10,324 for depreciation on fixed assets and £51,966 for taxation.

To the profit of £57,759 has been added £14,487 forward from last year, making available for appropriation £72,246 as against £91,987 last year.

New Capital.

During the year, additional capital was issued into the Company to acquire a 40% interest in the United Cattle Corporation Limited. The interests of both the companies are closely allied to the meat industry and this acquisition will enable Tom Piper Limited to develop along national lines and is a part of the long-term developmental policy of the company.

Earning Rate.

After providing for interim dividends and increasing the general reserve by £30,000 to £100,000, a balance of £28,496 is available. Your Directors recommend that a final dividend of 6¼% be declared, making a total of 12½% for the year. This, with the final preference dividend, amounts to £13,750, leaving £14,746 to be carried forward in the Profit and Loss Account.

Shareholders' Funds.

After providing for the 5% preference dividend and 12½% dividend on ordinary shares, increasing our depreciation on fixed assets to £39,052 and creating a Taxation Reserve of £62,292, total shareholders' funds now amount to £414,746 as against last year's total of £334,487.

Fixed Assets.

In regard to our conservatively valued freehold property, this shows an increase of £14,223 and now stands at £90,372. This increase is mainly represented by additions to existing buildings and by the erection of a completely new and modern laboratory which has been equipped with the latest food technological equipment and will enable your Company to exercise a greater degree of quality control over existing products and to experiment and develop a number of new varieties which the Company intends to introduce on the local and overseas markets.

Plant.

During the year under review, we installed additional American equipment and other essential plant and this, together with motor vehicles, increased the value of this item to £104,203, being an increase of £20,373 against which we have written off a total of £39,052 for depreciation. The Plant Account now stands at £65,151.

Stock.

The value of stock held throughout Australia is slightly lower but is comparable with that of last year. This is due to the steadily increasing volume of business done by the Company in Australia the higher prices at which raw materials have to be purchased and carried, together with the fact that we have opened branches in most of the Australian States and are carrying stocks at the most strategic points throughout the Commonwealth. Having regard for all these factors, your Directors do not consider stock of £423,000 excessive.

Production.

Production has been well maintained over the year, but it is apparent that the Commonwealth and world outlook for canned foods has been passing through a highly competitive and selective phase.

The cost factor is one to which the Directors and management of your Company are directing their full attention in the most realistic possible way in the day-to-day conduct of the business. It is becoming increasingly evident that our cost structure is out of line with world prices—and everything depends on our ability to reduce costs still further in order that we may consolidate and further develop existing markets.

Sales and Distribution.

Sales throughout the year have been good and we have continued to develop and open up markets in the Pacific, in the U.S.A. and in Canada—and we are pleased to report that all these areas are showing definite signs of developing along sound lines.

Earlier in the year, the United Kingdom market underwent a period of readjustment, mainly due to oversupply of certain commodities, and this—combined with speculation on the part of certain importers—caused heavy losses to both manufacturers and their U.K. agents. We are happy to advise shareholders that your company has come through this difficult and trying period without loss of profits or goodwill of any kind—and was in no way connected with the adverse press reports earlier in the year. However, during the past few weeks, the United Kingdom market has firmed considerably. Importers are having to replace their depleted stocks and your company is obtaining a substantial share of the orders being placed.

Local sales have shown a steady and pleasing increase for the past twelve months and, as our distribution becomes wider, we are gaining steadily in the volume of business from the increasing number of retail chain stores and wholesale outlets which we have in Australia—and, as we have indicated earlier, we have extended the scope of our domestic business to Papua, New Guinea and the Pacific generally.

General.

For some years now, the high rates of company taxation have made it extremely difficult for young companies to retain adequate reserves for the future development of their organisations, and it is, therefore, encouraging to observe the realistic approach that the Treasurer has made in presenting the latest Budget—and we all welcome the various taxation reductions. The implications of these concessions will certainly not pass unnoticed in attracting British and American capital to this country.

Wangaratta Woollen Mills Ltd.

Reg. Office: Wangaratta, Vic. **Directors:** G. C. Tootell (Chairman), E. A. B. Greene, W. F. Callander, A. H. Smith, Wm. C. Jackson. **Auditors:** M. V. Anderson & Co.

Year ended May 31, 1953. Meeting September 25, 1953.

Although unfavourable conditions persisted in the early part of the year, trading improved later. Turnover was lower than in the previous year, but more favourable conditions resulted in a record profit of £30,112.

Ordinary dividend was raised by 1% to 6%. New rates of company taxation will reduce taxation liability by approximately £7,000.

In addressing shareholders at the Annual Meeting on September 25, the Chairman, Mr. G. C. Tootell, made the following remarks:

The accounts for the year ended May 31, 1953, show the result of operations for the year to be a net profit of £30,112, which compares with the net profit for the previous year of £25,268.

A comparison of net profits does not reflect the real improvement in results. Due to a special allowance of initial depreciation for tax purposes, the tax payable for the year ended May 31, 1952, was very low. If we compare the profits before taxation, the comparative results are £62,112 for the year under review compared with £28,368 for the preceding year.

Since the accounts have been completed, the Federal Treasurer has announced reductions in the rates of Company Income Tax. On the new rates as announced, the provision for taxation made in arriving at the profit for the year is approximately £7,000 more than will be necessary.

Although the final result has been satisfactory, considerable difficulties were encountered in the early part of the financial year. During that period the price of wool was continuing to decline, and in the face of this trend, customers were not inclined to so readily commit themselves for orders as is the case where prices are more stable. It has become increasingly apparent that while wool prices remain at their present high level, any sign of decline is quickly reflected in hesitancy throughout the trade. It is also apparent that customers are hesitant to place orders in the gaps between the wool selling seasons for fear that the opening of the season might show a fall in prices.

During the latter half of the year while wool prices were steadily rising, sales were very satisfactory enabling production to be restored to the full capacity of the plant.

Balance Sheet.

The movements in the Balance Sheet may be summarised as follow:—

Due mainly to the increased value of Stock on Hand, current assets increased over the figure for the previous year by	£76,658
The completion of extensions to buildings was the main factor in increasing fixed assets by	36,058
	£112,716
Funds for these increases were provided by—	
Retention of profits	£8,962
Increase in bank overdraft	70,565
Increase in other liabilities and provisions	33,189
	£112,716

Building Extensions.

As mentioned in the Directors' Report, the extensions to the mill building have been completed. It is now possible to effect a rearrangement of the layout plant to give greater efficiency and economy in operations and plans in this regard are being put into effect forthwith.

The Directors' Report refers to the completion also of extensions to the humidifying system, provision for increased steam generating capacity and the installation of a water softening plant.

The completion of the abovementioned extensions to building and plant are the termination of plans which have taken some years to effect, and the company is now possessed of a most modern plant with all the technical facilities to ensure continuance of high quality production of yarn.

Conclusion.

The past few years' operations have been affected by such factors as credit restriction and violently fluctuating wool prices which have made the earning of satisfactory profits a difficult matter.

While the profit for the year under review is an all-time record, it is not in the opinion of your Directors, a satisfactory return on capital employed, and it is hoped that a continuance of the present favourable conditions will result in improved earnings and profits.

The thanks of the Board are again extended to its executive staff and all those other employees who have played their part in the achievement of the results for the year.

The following address was given by the Chairman, Mr. F. G. Harding, at the Annual Meeting of shareholders on September 28:

Operations of the company for the year ended June 30, 1953, resulted in a profit which is not unsatisfactory, taking into consideration the general economic conditions. Comparative figures are as under:

	1952	1953
Profit before providing for depreciation of fixed assets and income tax	£160,562	£164,61
Profit after providing for depreciation but before providing for income tax	117,447	100,75
Profit after providing for depreciation and income tax	60,959	51,13

Provision for taxation was made at the rates operating at th balancing date, but the reduction in company taxes announced b the Federal Treasurer makes the provision in excess of require ments to the extent of £10,600, so that the true net profit for th year is £61,733, compared with £60,959 for the previous year.

Business Activity.

As indicated in my address to shareholders at the last Genera Meeting, the volume of business declined during the year follow ing a reduction of imports and a slowing down of public utilit construction works. However, the company's activities are divers fied and some sections continued to expand and offset to a helpfu extent the loss of turnover in those sections more directly deper dent upon imports and construction works.

Plant and Buildings.

Expenditure on new plant was on a much smaller scale tha in the previous year, and the Directors expect that such expendi tures in the current financial year will be less than depreciatio charges.

Because of unpredictable factors, the new garage and work shop building in Melbourne was not completed until after th close of the year, but use commenced some weeks ago. The build ing is more suitable than that in North Melbourne used for th past twenty-five years and the additional land leased provide room for open storage and expansion. The old garage, which ad joins the company's stores, will be utilised for revenue earnin purposes.

The Articles of Association have been under review for som time past, and at an early date shareholders will be asked to ap prove of a new set in conformity with modern ideas.

Zircon Rutile Ltd.

At the Annual Meeting of shareholders on September 30, th Chairman, Mr. Wallace H. Smith, gave the following address:—

I have pleasure in submitt'ng my report on the past year's trad ing, which resulted in a profit, before tax, of £40,298, as compare with £40,879 last year.

Provision for taxation at known rates at 30/6/53, however, wa higher at £18,700, as against £13,802 in the previous year. In vie of the Budget announcement there is now an over-provision fo tax of £4,000.

The reason for liabilities being higher than normal is th inclusion of two years' tax provision, instead of one.

Notwithstanding this feature, you will observe that—

Current assets total	£146,356
while total liabilities are	58,855
Leaving working capital of	£87,501

which is £15,400 more than last year.

Compared with 1952, stocks on hand show a reduction of £10,00 Capital expenditure has been only moderate at £9,000.

Freights.

I mentioned last year that the New South Wales Railway had imposed a 200 per cent. increase in rail freight on our product which are relatively low-priced, compared with other minerals an metals, and though persistent approaches were made to the Depar ment, the Company still has to pay an unreasonable and penal bur den having no economic relationship with what the products ca carry.

Markets.

The market for Rutile, which was exceptionally strong when w last met, developed an easier tendency later and prices gradual fell, and by the end of June, price cutting by some producers becam prevalent, which, of course, only aggravated the situation, and en couraged buyers to withhold orders in the hope of lower price obtaining.

The Zircon market still remains quiet.

Australia probably has the largest deposits in the world of thes minerals, but until producers recognise the value of co-operatio toward maintaining reasonable and stable prices the industry likely to be subject to periodic fluctuations, which, in our opinio is caused not so much by the attitude of buyers but by the polic of the sellers.

The present half-year is likely to be rather difficult pending re vival in trade, but the Company is well conditioned financially t meet these occasional fluctuations, and shareholders can be assure that our plant is being maintained in a high state of efficiency an is in a position to obtain the maximum benefit from any increase i the volume of orders.

During the year, one of your Directors, Mr. Geoffrey Hickso visited U.S.A. and Europe, and conferred with our agents regardin future business. He also established personal contact with man of our regular customers as well as several new ones, the benefit which I have not doubt will be most useful to the Company.

I would like to thank, on your behalf, the management, staff an employees for their good work during the year.

The Company conducts an old-established business of Brushware Manufacturers and Merchants.

Stocks were £100,757 lower, and overdraft was reduced by £114,333, reflecting greater availability of materials.

Sales in the current year have shown a healthy increase.

Net tangible asset backing (book values in consolidated balance-sheet)—£1/3/3.

The following address was given by the Chairman, Mr. E. A. Underwood, to shareholders at the Annual Meeting held on September 28:

The Consolidated Accounts for the year have been presented in our usual form, and, I think, are clear and informative, but I would like to refer to some items which are significant.

As our trading activities are centred in the Subsidiary Company, my remarks regarding trading results will refer to that Company. I am pleased to report that the unit sales increased by 20% compared to last year, and were an all time record, but the turnover dropped by 8%. This reduction in turnover was brought about by reduced selling prices, due to lower costs of some items of raw material.

As we have absorbed during this year losses on raw material stock values brought about by adjusting inventories to reduced market prices, it is very pleasing to note that the net profit, after making provision for depreciation, but before providing for taxation was £36,103 compared to £39,025 last year. Having regard also to the reduced turnover, I think this result must be considered very creditable particularly as basic wage adjustments resulted in increased operating expenses during the year.

The consolidated profit after making provision for taxation was £20,304 compared to £21,865 last year. The manner in which this profit is dealt with is set out in the Directors' report, and it is pleasing to note that although the preliminary expenses were written off during the year, the amount of unappropriated profits carried forward now amounts to £30,448.

Dividend and Taxation

A dividend of 8 per cent. on the paid-up capital of the Company is recommended by the Directors, and you will be asked to confirm this at a later stage of this meeting.

Since these accounts were printed, the Federal Budget has been announced, and it is gratifying to note that public company taxation has been reduced by 1/- in the £ on the first £5,000 of taxable income, and 2/- in the £ on the balance of taxable income. This makes the provision for taxation shown in the accounts under review £3,360 in excess of the amount this Company will now be called upon to pay, so this provision may now be revised which will increase the amount of unappropriated profits to £33,808.

Stocks

When reviewing the accounts for year ended 30th June, 1952, at our previous Annual Meeting, I pointed out that both our raw material stocks and bank overdraft were abnormally high, for reasons which I gave. As availability of most raw materials is now more satisfactory, your Directors, by careful management and control, were able to reduce stocks to £155,255 compared to £256,012 last year, and to reduce the bank overdraft from £123,844 last year to £9,492.

Stocks on hand have been valued at cost or market price, whichever is the lower, and it is the opinion of the Accounts Department that the amount of sundry debtors are all fully recoverable.

Plant

Two more automatic brushmaking machines were completed in our Engineering Shop during the year, and went into production. Several other machines are in course of completion by our Engineers, and will soon be ready for the production line.

All plant has been kept up to a very high standard of maintenance and repair, so that we have a first class plant, mostly modern, standing in the books at a very conservative valuation. The maximum depreciation allowable by the Taxation Department has been written off this Asset each year.

The use of the building and timber yard at Footscray which was leased three years ago, has been extended during the year to include wood working machines, and is proving a valuable asset in relieving our shortage of factory and storage space.

Prospects

Since the close of the year under review, the sales and units have shown a healthy increase over the corresponding period of last year. The monthly profit and loss statement prepared each month for the consideration of the Directors shows that a satisfactory profit is being maintained in the new period.

I hope that the shareholders are interested in the various illustrations in this year's Annual Report, showing the attractive manner in which the products of the Company are marketed. These also show the essential nature of our industry, as there is not one item amongst our comprehensive range of brushware that is not essential to the home, industry and primary producers.

This must be regarded as an important factor in assessing the future prospects of the Company, and as there are definite signs of increases in the demand for our goods, we look forward with optimism to the future.

Conclusion

I would like to express my appreciation of the assistance the Associate Directors have been to the subsidiary Company during the year, and to thank them for their help, enthusiasm, hard work and the responsibility they have willingly accepted, without which your Company would not be in such an excellent position as it is today.

I would also like to thank the office, distribution and factory staffs for the loyal and efficient service given by them, and I am sure I can add an expression of appreciation to all concerned from shareholders.

Yellow Cabs of Australia Ltd.

Reg. Office: 166 City Rd., Sth. Melb., Vic. **'Phone:** Office, MX 4819; Despatch, MB 2421. **Directors:** Maurice Shmith (Chairman), D. S. Aarons (Vice-Chairman), A. R. Tewksbury, Eugene Gorman, A. A. L. Buckeridge, S. Thorpe. **Auditors:** Wilson, Danby & Giddy.

29th Year ended June 30, 1953. Meeting September 29, 1953.

Although profits shown in the accounts were £18,000 lower at £14,291, new rates of taxation will increase net profit by approximately £11,000 to a total of £25,000 for 1952/53. Profit on sale of replaced cabs provided a further £37,393. Dividend was again 13.3%.

Reserves and undiv. profits†	**212,178**	193,066*	172,259	250,244

*Adjusted for £7,797 taxn. overprovided.
†Excluding cab replacement reserve (£52,500 in 1953), and in 1950, incl. £78,931 assets revaln. reserve subsequently capitalised.

In addition to providing taxi-cab services in Melbourne and Sydney, the company operates "Drive Yourself" divisions in both cities, and a Hire Car service in Sydney—The Hughes Motor Service. Operations of the subsidiary were affected by a lesser demand for contract work during the year.

The introduction of taxi-cabs of lower horsepower has reduced operating costs.

Net tangible asset backing (book values)—14/3 for each 7/6 fully paid share.

In addressing shareholders at the Annual Meeting on September 29, the Chairman, Mr. M. Shmith, made the following remarks:

In reviewing the activities of your company I have pleasure in announcing a year of successful operation, and I believe that the improved form of presentation of the Annual Report and Balance Sheet adopted this year will be found more interesting by our shareholders.

Trading Results.

The trading results of the year were comparable with those of the previous year, but the amount recovered from the disposal of replaced units of the fleet was greater. Profits earned from disposals should be regarded as a set-off against the depreciation charge, and will be influenced by the Company's policy of more regular replacements.

Gross profit for the year was £105,684, and includes the dividend receivable from the subsidiary company, £3,200, and the profit on the sale of fixed assets, £37,393. The provision for taxation at £54,000 leaves a net profit of £51,684 available for appropriation.

The decision of the Federal Government to reduce the rates of taxation for companies was made known after the Company's figures had been compiled, and the provision made for this item will therefore be approximately £11,000 greater than the actual liability.

The results of the past year show that the introduction of taxicabs of lower horsepower has been responsible for a reduction in the charges for service and maintenance, and a continuation of this policy is expected to produce further improvement. The increase in the charge for depreciation is to provide for the speedier replacement of units.

Balance Sheet.

The increase of £3,264 in the asset "Freehold Land and Buildings" represents the balance of the cost of additions to our Sydney premises during the year. The buildings in both Melbourne and Sydney occupy valuable sites and have fully justified the expenditure made in recent years. At the present time work is proceeding on the erection of an amenities block in Melbourne to provide modern facilities for our staff.

The amount of £15,203 has been appropriated to the credit of General Reserve Account from the operating profit for the year which, together with the appropriation of £7,797, surplus on the provision for taxation for the previous year, increases the total of this Reserve Account to £180,000.

The Staff Provident Account has been increased by an amount of £1,000, the total of the account now being £16,000.

After making these appropriations and providing for the dividends, recommended by your Directors, the balance carried forward at credit of the Profit and Loss Appropriation Account is £18,276, an increase of £3,910.

Subsidiary.

The results of the subsidiary company, Hughes Motor Service Limited, show a decrease from the previous years' figures due to a lesser demand for contract work. However, the installation of the two-way radio in the vehicles of this fleet has been completed, ensuring that a speedier service can be rendered with a saving of time both to the company and the clients.

The Future.

Your Board looks to the future with confidence, and is heartened by the relief afforded in the recent Federal Budget. The concessions granted in direct and indirect taxation should make for an upward trend in business generally and economic conditions should be more stabilised.

The revenue figures for the current financial year show an improvement on those for the same period of last year.

Road Safety.

Your Board applauds the action of the Victorian Government in introducing legislation to fix a speed limit of 30 miles per hour for motor vehicles in the metropolitan area, and we feel that this legislation will provide the Police Department with the authority to properly control the manner in which motor vehicles are driven. It is our considered opinion that this suggested legislation will constitute the greatest contribution towards a reduction of the number and extent of road accidents.

Conclusion.

It is with pleasure that I, as Chairman, acknowledge the loyal service which has been rendered by the staff of the company and the efficiency, safety and dependability of the service they have provided for the community.

Reports on Mining Companies

A.1 CONSOLIDATED GOLD N.L.—Payments towards cost of new power line approximating £56,000 have exhausted reserve funds. Towards meeting cost of deepening shaft a further 120 feet, a call of 1/- made on contributing shares. Operation on S.E.C. power since mid-September means substantial reduction in mining and milling costs.

NORTHERN MINES DEVELOPMENT N.L.—Report for quarter ended 30/9/53; recent assays from No. 5 Hole show low values from 362 feet to 380 feet; hole is continuing; although a substantial amount of low-grade material has been encountered, only one hole so far has yielded ore of attractive grade. Diamond drilling now commenced at property on Northern Star (Tennant Creek) Gold Mines N.L.; two company drills in operation and contract let for the employment of two additional drills by an outside contractor. Mapping and study of other prospects proceeding.

OIL SEARCH LTD.—Omati test remains closed down awaiting arrival of special equipment. In the meantime, road construction to second Omati test is now in progress and geological and geophysical surveys proceeding in Western Papua.

RENISON ASSOCIATED TIN MINES N.L.—Subject to audit, profit for year £1,837 after depreciation £5,000 and taxation £1,010. Payment of dividend deferred.

A pre-Christmas Investment that will go on 'giving' for years

MELBOURNE & METROPOLITAN BOARD of WORKS

£650,000 Cash and Conversion LOAN

What more profitable Christmas gift for yourself than a subscription to this latest Loan? An authorised investment for trustee funds in Victoria, it truly merits the term "gilt-edged." Moreover, the interest rate of £4/15/- per cent. per annum is the highest available from any Semi-Government loan. You need not necessarily be a large investor. Anyone with £100 can contribute. But, prompt action is important! *Only a limited portion of the Loan is available to cash subscribers.*

SUBSCRIPTIONS. You may subscribe in full on application or pay 10% on application and the balance not later than 4th January, 1954.

PERIOD. This loan is issued at par for an optional period of 10 or 15 years from 1st January, 1954.

CONVERT MATURING HOLDINGS AT HIGHER RATE. Holders of Debentures or Inscribed Stock of Loan No. 126, maturing on 1st January, 1954, are urged to convert their present holdings to this new Loan and so avail themselves of a higher return on their investment.

WHERE TO APPLY

Applications may be lodged, free of exchange, with the Board's Bankers, the Commonwealth Bank of Australia and the Australia and New Zealand Bank Limited — at any of their branches in Victoria, or their principal offices in Sydney and Adelaide. Also at the Board's Head Office, 110 Spencer Street, Melbourne, or through any member of recognised Stock Exchanges throughout Australia.

The Loan is Underwritten by J. B. Were & Son.

SECRETARY AND REGISTERED OFFICE:

RONALD MOORE, of the firm of Spry Clark Tootell & Co., Chartered Accountants (Aust.), 339 Collins Street, Melbourne.

SOLICITORS TO THE UNDERWRITING BROKERS:

MALLESON STEWART & CO., 46 Queen Street, Melbourne.

INVESTIGATING ACCOUNTANTS FOR THE UNDERWRITING BROKERS:

R. G. GROOM & CO., Chartered Accountants (Aust.), T. & G. Building, Queen Street, Brisbane.

UNDERWRITING BROKERS:

IAN POTTER & CO., 360 Collins Street, Melbourne, Members of The Stock Exchange of Melbourne, by whom the whole of the issue was underwritten and taken firm.

OBJECTS OF THE ISSUE:

Falkiner Holdings Limited has been formed to acquire the whole of the issued share capital of Falkiner Machinery Company Pty. Ltd., Chain Manufacturers, of Brisbane. The consideration for the acquisition is the sum of £80,000, which will be satisfied by the issue to the shareholders in the Proprietary Company of 95,000 Ordinary shares of 10/- each fully paid, and the payment of £32,500 in cash. The Proprietary Company will become a wholly owned subsidiary of Falkiner Holdings Limited, and will continue to function as the operating Company,

The proceeds of the issue will be used to provide the cash payment referred to above.

REPORT BY THE CHAIRMAN OF DIRECTORS OF FALKINER HOLDINGS LIMITED:

(Mr. E. C. Fernandez, Chartered Accountant (Aust.)).

Messrs. Ian Potter & Co.,
360 Collins Street,
MELBOURNE. 27th October, 19

Dear Sirs,

I have pleasure in furnishing a report regarding the activit of Falkiner Machinery Company Pty. Ltd., for inclusion in t Prospectus of the issue by Falkiner Holdings Limited of 65, Ordinary shares of 10/- each at par.

The Company commenced business in 1930, by acquiring t assets of a small company in Queensland, Bloomer Chains Limit After a re-organization in 1932, additions and improvements ma in the extent and quality of the plant brought about a steady i crease in a widening range of production. Following oversea tren the use of steel in place of hand-forged wrought iron in cha making was introduced in 1941.

Early in the last War, it became apparent that Austral through cessation of oversea supplies, was likely to suffer a seric shortage of cable chains. Steps then taken by the Company speed up local production included development of a process electric flash butt welding, and Lloyds Register of Shipping, Lond after extensive tests, approved of the Company's chains for by all ships operating under Lloyds Register. Considerable quantit of chains were supplied also to Commonwealth War and ot Departments, and to the U.S. Forces.

Since the War, the range of production has been widened stead to meet growing trade opportunities, and it now embraces ma types and sizes of chains, including roller and conveyor cha and attachments. All of these products are sold throughout Commonwealth under the Company's registered brand, "F.M.C Commonwealth and State Governments Departments are large use

The Company's factory is situated on a freehold site in Br bane and is conveniently placed for transport. Buildings are good condition, while plant is efficient and includes a chain test machine and equipment. The establishment is the only one Australia, apart from that of the Commonwealth Government Garden Island, Sydney, which is approved by and registered Lloyds Register of Shipping as a testing house. The Compa has a competent and experienced staff which now comprises appro mately 100 employees.

In the Report of the Investigating Accountants contained la in this Prospectus, the assets backing for each issued 10/- Ordin share, after this issue, is shown at 9/3d. This is based on b values of fixed assets, which include plant and machinery, fur ture and fittings of a written down book value of £9,502. Th items were independently valued (not for the purpose of this Pr pectus) on 31st March. 1953 by Mr. Joseph Beiers, A.M.I.E. (Aust.) Brisbane, at £28,590 on a "going concern" basis (being considera less than replacement values). On the basis of this valuation, tangible assets backing for each 10/- share would be increased 11/7d.

Production for the year ended 31st July, 1953, was at a rec level, and present orders will keep the plant employed bey ordinary working hours for over twelve months.

In the absence of any material change in present trading c ditions, the Directors consider that the steady growth of the P prietary Company in recent years will be maintained, and ex to be able to recommend annual dividends on the shares of Falk Holdings Ltd. at a rate of not less than 8 per cent., after adequ provision for reserves.

E. C. FERNANDEZ,
Chairm

REPORT BY THE INVESTIGATING ACCOUNTANTS

T. & G. Building,
Queen Street,
Brisbane,
27th October, 1

Messrs. Ian Potter & Co.,
360 Collins Street,
MELBOURNE, VICTORIA.

Dear Sirs,

You have informed us that Falkiner Holdings Limited propo to issue capital to an amount of eighty thousand pounds (£80,(in one hundred and sixty thousand (160,000) shares of ten shill (10/-) each.

You have also informed us that Falkiner Holdings Limited is being formed for the purpose (inter alia) of acquiring all the issued capital of Falkiner Machinery Company Proprietary Limited.

The purchase consideration for the shares to be acquired is eighty thousand pounds (£80,000) to be satisfied as follows:—

as to £47,500 by the allotment of 95,000 ordinary shares of 10/- each fully paid,
and,
as to £32,500 by a cash payment.

We understand that you propose to enter into an underwriting agreement in respect of the issue to the public of sixty-five thousand (65,000) ordinary shares of ten shillings (10/-) each.

Paid-Up Capital:

Upon completion of the above issue of shares, the paid-up capital of Falkiner Holdings Limited will comprise the following:—

65,000 Ordinary shares of 10/- each issued for cash,
and,
95,000 Ordinary shares issued as part consideration for the transfer of 15,000 Preference shares and 2,002 Ordinary shares being the entire shareholding of the Operating Company.

160,000 Ordinary shares of 10/- each.

You have requested us to prepare the requisite certificate for inclusion in the Prospectus of the Public Issue, and in accordance with your instructions we have investigated the accounts of Falkiner Machinery Company Proprietary Limited for the five financial years ended 31st July, 1953.

The latest date to which the accounts of Falkiner Machinery Company Proprietary Limited have been prepared is 31st July, 1953.

Profits Results:

The Net Profits of Falkiner Machinery Company Proprietary Limited for each of the five financial years ended 31st July, 1953, are set out hereunder.

In compiling this table, we have made such adjustments, as in our opinion, are appropriate.

ADJUSTED PROFITS STATEMENT

	Year ended 31st July, 1949	1950	1951	1952	1953
	£	£	£	£	£
Adjusted Profits before providing for Income Tax	11,148	9,899	17,488	19,682	25,124
Less Provision for Income Tax at rates now applicable to public companies ..	3,652	3,215	5,871	6,639	8,543
	£7,496	£6,684	£11,617	£13,043	£16,581
The percentage available for reserves and dividend out of the Annual Adjusted Net Profit upon an issued ordinary share capital of £80,000	9.37%	8.35%	14.52%	16.30%	20.73%

Financial Position:

A summary of the Consolidated Statement of Liabilities and Assets of FALKINER HOLDINGS LIMITED and its Subsidiary, Falkiner Machinery Company Proprietary Limited, is set out hereunder.

This statement has been prepared as at 31st July, 1953, to illustrate the financial position which would have been disclosed at that date if:—

(1) Falkiner Holdings Limited had been incorporated at that date.
(2) The capital transactions referred to above had been effected.
(3) The proceeds of the issue of shares to the public for cash referred to above had been applied in part satisfaction of the purchase of the shares in the Subsidiary Company.
(4) The estimated cost of the issue including underwriting, brokerage, etc., of £3,000 had been met out of the funds of the Subsidiary Company, or by means of an overdraft raised by the Holding Company.

LIABILITIES

	£
Current Liabilities:	
Net amount owing to Bankers	5,901
Provision for Taxation	6,780
Trade Creditors and Accruals	4,760
Dividend declared prior to 31/7/1953 and paid subsequent to that date	9,436
	£26,877
Paid-Up Capital of Holding Company:	
160,000 Ordinary Shares of 10/- each	80,000
	£106,877

ASSETS

	£
Current Assets:	
Stocks on Hand—as valued	43,460
Trade Debtors and Deposits	23,159
	£66,619
Fixed Assets:	
Freehold Property—At valuation £24,900	
Plant and Machinery, Vehicle, Furniture and Fittings—at cost less depreciation and provisions for replacements 9,502	
	34,402
	£101,021
Intangible Assets:	
Difference between purchase consideration and par value of shares in Subsidiary Company	62,998
Less—Reserves and undivided profits of Subsidiary Company—	
Assets Revaluation Reserve 16,880	
Tax Paid Profits Reserve 14,030	
Profit and Loss Appropriation A/c. .. 29,232	
60,142	2,856
Estimated Formation Expenses of Parent Company ..	3,000
	£106,877

TANGIBLE ASSETS COVER

The Net Tangible Asset support for the Paid-up Capital may be calculated as follows:—

Current Assets	£66,619
Fixed Assets	34,402
	£101,021
Less Current Liabilities	26,877
Net Tangible Assets supporting £80,000 Ordinary Capital	£74,144

The Net Tangible Assets Cover is therefore—
For each 10/- ordinary share—9/3 per share.

Verification of Assets and Liabilities:

Current Assets, £66,619—

The existence and values of current assets have been verified by us in the usual manner. Inventories of stock on hand have been inspected and, in our opinion, the values adopted have been determined on a satisfactory basis.

Fixed Assets, £34,402:

Land and Buildings, at Valuation £24,900—

A valuation of the land and buildings of the Subsidiary Company was made on the 16th April, 1953, by Messrs. Sharp and Musgrave and the book value increased to the valuation figure prior to 31st July, 1953.

Plant and Machinery, Furniture and Fittings—at cost less depreciation and provisions for replacements—£9,502.

A valuation was made on the above items on the 31st March, 1953, by Joseph Beiers, A.M.I.E. (Aust.), of Brisbane, and placed a value on these items of £28,590.

Current Liabilities:

We have satisfied ourselves that all the liabilities of the Subsidiary Company as at 31st July, 1953, have been disclosed to us, and we have further satisfied ourselves that the provision for taxation is adequate to cover in full the liability of the Subsidiary Company for Income Tax on profits earned to 31st July, 1953.

Yours faithfully,
R. G. GROOM & CO.,
Chartered Accountants (Aust.).

(The valuations referred to in the above Report were not prepared for the purpose of incorporation in this Prospectus).

Note: The net tangible asset support—9/3d.—shown in the above Report for each 10/- Ordinary share is based on current and fixed assets at 31st July, 1953, at book values totalling £101,021.

An independent valuation made on 31st March, 1953 (not for the purpose of this Prospectus) of plant and machinery, furniture and fittings placed a value on these items of £28,590, compared with book values of £9,502—an increase of £19,088, on which basis the net tangible asset support would be increased from £74,144 (as indicated in the Report) to £93,232, equal to 11/7d. for each 10/- share.

DIVIDENDS:

The shares of this issue will rank for dividend as from the date of the Company's incorporation (4th November, 1953), equally with the shares allotted to the vendors. It is proposed to pay dividends half-yearly.

The tax paid reserve of £14,030 (referred to earlier in the Prospectus in the Report of the Investigating Accountants) is available for distribution by way of dividend to the shareholders in the Holding Company and dividends paid out of this reserve will not be subject to income tax in the hands of the recipients.

It is expected, in the absence of any material change in present trading conditions, that the Directors will be able to recommend dividends at a rate of not less than 8% per annum and such dividends will be paid wholly out of the tax paid reserve until it is exhausted. The amount of this tax paid reserve is equal to approximately 17½% on the capital of the Company after the issue of shares has been made.

STOCK EXCHANGE LISTING:

Application will be made as soon as practicable for quotation of all issued shares of the Company on the Stock Exchanges of Melbourne and Brisbane.

UNDERWRITING AND BROKERAGE:

The whole of the issue was underwritten and taken firm by Messrs. Ian Potter & Co., Members of The Stock Exchange of Melbourne, for an underwriting commission (including brokerage) of Four pence half penny per share.

For Information Only

(This statement of extracts from the Prospectus of November 25, 1953, is for information only. The public issue has closed.)

The requirements of the Companies Act 1938 of the State of Victoria have not been fully complied with.

Northwest Tantalum No Liability

(To be incorporated under Part II of the Companies Act 1938 of the State of Victoria)

PROSPECTUS

of an Issue at Par of 600,000 shares of 5/- each payable as set out herein.

AUTHORISED CAPITAL: £1,000,000

Divided into 4,000,000 shares of 5/- each, of which

253,200	Contributing Shares are now offered for public subscription payable 6d. on application together with prepayment of a call of 1/- per share to be made immediately following allotment and the balance by calls as and when required	£63,300
280,800	Contributing Shares are now offered as a priority to shareholders of Blue Spec Mining Company No Liability on the register of that Company on the twentieth day of November, 1953, payable 6d. on application together with prepayment of a call of 1/- per share to be made immediately following allotment and the balance by calls as and when required	70,200
60,000	Shares are to be allotted as fully paid to 5/- each to Tantalite Limited as part of the purchase consideration	15,000
6,000	Shares are to be allotted as fully paid to 5/- each to the University of Western Australia in recognition of technical services rendered to the Mining Industry generally by Australian Universities	1,500
3,400,000	Shares are to be held in reserve	850,000
4,000,000		£1,000,000

The whole of the issue of 534,000 shares now offered for public subscription has been underwritten by the Underwriting Brokers, Messrs. Donaldson & Lynch.

NOTE: The Directors anticipate that it will not be necessary to call up the remaining 3/6 per share on the Contributing Shares offered as set out above, before March, 1954, and such amount will be called up in calls not exceeding 1/- per Share.

PROPOSED DIRECTORS:

JOHN GEOFFREY DONALDSON, 65 Mount Street, Heidelberg, Vic., Sharebroker and Company Director.
EDWARD WATERFIELD HAYWARD, Springfield, Adelaide, S.A., Merchant.
ARTHUR HEDLEY LEGGO, 25 Bay Street, Brighton, Vic., Metallurgist.
KENNETH WILLIAM CRAIG, 450 Collins Street, Melbourne, Vic., Accountant.
FRANK ARCHIBALD CLOSE, China Tree Estate, Comboyne, N.S.W., Mining Engineer.
ALLAN WETTENHALL LADE, 357 Little Collins Street, Melbourne, Vic., Retired.

RESIDENT CONSULTING ENGINEER:

A. L. KENNEDY, B.E., F.S.A.S.M., Dip. Mining, Adelaide, University.

LEGAL MANAGER AND REGISTERED OFFICE:

M. B. GEMMELL, A.C.A. (Aust.), A. R. Bruhn & Co., Cornhill Chambers, 450 Collins Street, Melbourne, Victoria.

ADELAIDE OFFICE:

A. E. H. EVANS & CO., Chartered Accountants (Aust.), Brookman Buildings, 35 Grenfell Street, Adelaide, S.A.

AUDITORS:

COOK, TOMLINS & MIRAMS, Chartered Accountants (Aust.), 360 Collins Street, Melbourne, Victoria.

SOLICITORS:

LANDER & ROGERS, 31 Queen Street, Melbourne, Victoria.
S. H. SKIPPER, THOMAS & BONNIN, Selborne Chambers, Pirie Street, Adelaide, S.A.

BANKERS:

ENGLISH, SCOTTISH & AUSTRALIAN BANK LTD., Melbourne, Adelaide, Perth.

BROKERS:

DONALDSON & LYNCH, 90 Queen Street, Melbourne, C.1 (Members of The Stock Exchange of Melbourne), who have underwritten the whole of the issue of 534,000 shares, and with whom are associated.
S. R. JOHNSON, 10 O'Connell Street, Sydney, N.S.W. (Member of The Sydney Stock Exchange);
GURNER & McARTHUR, Cavendish Chambers, Grenfell Street, Adelaide, S.A. (Members of The Adelaide Stock Exchange Limited);
T. A. JAMES & CO., St. George's Terrace, Perth, W.A. (Members of The Stock Exchange of Perth).

OBJECTS OF THE COMPANY.

Objects of the Company inter alia are to mine for ores of tantalum, columbium, beryllium, caesium, yttrium and other rare metals on claims at Wodgina, Tabba Tabba, Strelley and other places in Western Australia previously operated by Tantalite Limited.

Note: This undertaking is not to be confused with any project for processing minerals and the attendant complicated and delicate metallurgical processes. It is concerned solely with comparatively simple mining and concentration of minerals which have always been carried out on the field to the satisfaction of exacting purchasers.

It is also proposed to investigate the occurrence of radio active minerals with a view to developing and mining uranium bearing ores, the existence of which has been proved on and near the Company's leases.

HISTORY OF THE COMPANY'S MINING AREAS.

The vendor Company, Tantalite Limited, formed in 1931 to begin systematic production of Tantalite at Wodgina, 70 miles south of Port Hedland, Pilbara Goldfield (W.A.), installed a small concentration plant to treat lode material won by both open cut and underground mining methods. Earlier records show that Tantalite has been obtained from these leases since 1905.

The vendor Company became established as the leading Tantalite producer in the world. It confined its activities to mining for Tantalite ores and selling Tantalite concentrates. In the course of Tantalite mining, by-products in the form of columbite and beryl were obtained. Fansteel Metallurgical Corporation of Chicago, U.S.A., which has built up a virtual world monopoly in the processing of Tantalite and other associated rare minerals, stated in a recent brochure that only on these fields is high grade Tantalite found "in sufficient concentration to satisfy its ore requirements."

In 1942, the United States Government advised that it required Tantalite urgently for war purposes. The Commonwealth Government took over the Company's leases at Wodgina and Strelley (40 miles East-South-East of Port Hedland) and began production in 1943. The Government extracted quantities of Tantalite which were of such importance that they were flown direct from Wodgina to U.S.A. After cessation of hostilities in 1945 the Government handed the properties back to the Company. The vendor Company, however, has insufficient funds of its own to resume mining operations on the scale required by the vastly increased world requirements. The vendor Company has kept the properties and mining machinery in excellent condition with a permanent resident caretaker.

PROPOSALS AND PROSPECTS.

TANTALITE.

Northwest Tantalum N.L. proposes to acquire the mining properties set out herein to recondition existing plant and re-open the mines previously worked profitably under much less favourable conditions than exist today.

These properties have—

1. PROVED ORE reserves of 100,000 cubic yards of eluvial deposits, easily worked and accessible, having a mineral content of £250,000 in Tantalite alone.
2. PROVED reserves of 200 tons of beryl at Wodgina.
3. PROBABLE ORE reserves in eluvial deposits at least as valuable as the above proved reserves.
4. INDICATED ORE of very considerable quantity and value in three enormous pegmatite dykes at Wodgina, Tabba Tabba and Strelley.
5. Ten other mineral claims containing these minerals but which have not yet been tested.
6. A mining plant in good order and condition which, with the additions set out in this prospectus, will ensure successful concentration.
7. Considerable quantities of other rare valuable and saleable minerals—beryl, columbite, caesium.
8. Uranium bearing ores are present in the Wodgina dyke. (It is stressed that the quantities found to date cannot be regarded as an indication that radio-active minerals are present in commercial quantity).

The Company has—

a) The services and supervision of Mining Engineer, Mr. A. L. Kennedy, who on these mines, established himself during some thirty years of experience as the foremost authority on the mining and concentration of Tantalite and associated minerals.

b) GUARANTEED HIGH PRICES AND AN OPEN CONTRACT BY THE UNITED STATES GOVERNMENT to purchase all ore produced for a period of 3 years, expiring 31st December, 1956, or until 15,000,000 lbs. of combined tantalum, columbium pentoxidies have been produced. (The world's resources of these rare minerals are so meagre that informed authorities consider less than half of the required 15,000,000 lbs. of concentrates will become available before the expiration of the open contract.)

c) Taxation concessions in that 20% of income from minerals won is free from taxation. (Dividends from this portion of the income are tax free in shareholders' hands.)

The Company intends to begin work on its mines immediately, nd Directors estimate that continuous production will commence ithin six months. From operations on the PROVED eluvial deosits, Mr. Frank Close, B.E., Mining Engineer, estimates that the ompany will earn a profit of £206,000 in the first year of regular roduction. While this work is in progress the Company will delop the dyke formations and carry out a drilling programme at Vodgina, Tabba Tabba and Strelley.

An important point is that the dykes are largely surface minng propositions and will continue so for many years.

Australia was the first country in the world to produce Tanalite in quantity and has been the only country to produce high rade Tantalite. Its total output of Tantalite to date has been 93 tons. Of this total, no less than 270 tons has been produced rom this district.

RANIUM.

While the Company's principal object is the mining of Tantalite, is intended to vigorously prospect for and, if warranted, develop nd mine uranium bearing ore. It can be stated quite definitely hat uranium bearing minerals do occur on the Company's leases nd on other areas in the North-west of Western Australia. The ecessary prospecting equipment will be purchased, and geological taff employed so that this Company will be well to the fore in he search for radio-active minerals in this area.

It is considered that there is every chance of locating payable eposits of uranium. The following quotation is from the Commonealth Bureau of Mineral Resources booklet entitled "Pamphlet o. 3—Radio-Active Mineral Deposits."

"The complex minerals fergusonite, samarskite, euxenite and tantalopolycrase occur in pegmatite, and in eluvial and alluvial deposits derived therefrom, in the Marble Bar district of Western Australia.

"The uranium-thorium silicates, maitlandite, nicolayite, pilbarite and hydrothorite, have been found in small quantities at Wodgina in the Pilbara goldfield, Western Australia."

Attention is also drawn to references on Pages 6, 7, 9, and 19 f the same booklet and colour plates contained therein, for further vidence of the occurrence of radio-active minerals on and adjacent the Company's leases and elsewhere in the North-west of Vestern Australia.

MARKET SURVEY.

NITED STATES GOVERNMENT GUARANTEED PURCHASE PROGRAMME.

Defense Materials Procurement Agency, an authority of the nited States Government under regulation published in The ederal Register, August 1, 1952, 17 F.R. 7053, states—

ection 1. "The purpose of this regulation is to establish a guaranteed purchase programme designed to encourage the expansion of the production of columbium—tantalum bearing ores and concentrates of both domestic and foreign origin. The programme was authorised by the Defense Production Administration on January 1, 1952. Under the programme the Government agrees to purchase a minimum of 15,000,000 pounds of contained combined pentoxide (Cb_2O_5 plus Ta_2O_5)."

ection 3. "Duration of the programme. The programme shall terminate and be of no further force or effect as of the close of business on December 31, 1956: Provided, however, that the Administrator may terminate the programme as of the date when the Government has purchased 15,000,000 pounds of contained combined pentoxide (Cb_2O_5 plus Ta_2O_5)."

D.M.P.A. through their agents have stated that the above con-act "is an open contract which guarantees producers the purhase of any production of tantalum-columbium material."

RICES.

U.S. Government Contract price for Tantalite Concentrates is:

Up to 40% Ta_2O_5	$3.00	lb. contained Ta_2O_5
40% up to 50%	.30	lb. contained Ta_2O_5
50% up to 65%	.60	lb. contained Ta_2O_5
	$3.90	
Plus 100% bonus	3.90	
	$7.80	lb. contained Ta_2O_5

With these prices, anticipated realisations for concentrates roduced by the Company are:

High grade Tantalite	£5,000–£5,200 per ton
Columbite	£2,000–£2,500 per ton
Beryl	£200 per ton

UMMARY OF USES OF THE PRODUCTS.

Tantalite is the ore of tantalum.
Columbite is the ore of niobium (columbium).
Beryl is the ore of beryllium.

Principal Use.

Heat resisting qualities of metals have become particularly important with the development of jet engines.

Tantalum and **Niobium (Columbium)** are **THE** two metals which have gained prominence for this reason.

Production of jet engines largely depends on quantity development of alloys of these rare metals.

Other Uses.

TANTALUM.

Corrosion resistant apparatus, Heat-interchangers, Pump and valve parts, Nozzles and spinnerets for synthetic threads, Current rectifiers, Sintered carbides for machine tools, Valves for radio transmitters, In glass for aerial camera lenses, Synthetic rubber.

And as an alloy for—

Electronic filament springs, Fountain pens, Radio tubes, Radar equipment, Surgical plates, wires, tubes and ligatures.

NIOBIUM.

(From Columbite Ore).

Alloying addition to stainless and low chromium steels to prevent weld decay, improve toughness and oxidation resistance, Permanent getter in Electronic Tubes, Electrolytic rectifiers, Cathodes in Electrolytic analysis.

BERYLLIUM.

Principal use—

Beryllium Copper for all types of electrical conductors.

In fluorescent lighting. As refractory material. As filament coating, supports and spacers in lamps and vacuum tubes. As cathode-heating element in radio tubes. As coreless-induction furnace lining, as radiation shields.

As windows for large X-Ray equipment. As ingredient for rayon type textile fibre.

Diamond mountings in drill bits. Tools required not to give rise to sparks when used where explosion or fire might result. Springs. Ball-bearings.

CONSIDERATION.

An agreement dated the Seventeenth day of September One thousand nine hundred and fifty-three has been entered into between Martyn Bruce Gemmell as trustee for the Company and John Geoffrey Donaldson whereby the Company when formed has the right to purchase a ninety-five per centum interest in certain selected mining properties in the Pilbara Goldfield and the Greenbushes Mineral Field together with the buildings plant and machinery thereon. Such properties are detailed in the Schedules set forth hereunder.

Pursuant to the agreement with John Geoffrey Donaldson and subject to the Company holding in trust for him a five per centum interest in the said properties, plant and machinery and all ore from time to time won, the Company has the right:—

(a) To exercise and take up the option of purchase granted to the said John Geoffrey Donaldson by Tantalite Limited pursuant to an agreement dated the Twenty-fourth day of March, 1953, and further agreement dated Eighteenth day of November, 1953, in respect of the mineral claims and water rights set forth in the first Schedule hereto which said mineral claims and water rights shall be transferred to the Company freed from all existing encumbrances. The option of purchase has been duly exercised on behalf of the Company to be formed in terms of the aforesaid agreement with Tantalite Limited. The purchase price to be paid to Tantalite Limited pursuant to the option is Twenty-five thousand pounds for the mineral claims and water rights and Twenty-seven thousand seven hundred and forty pounds for the plant and machinery which purchase price shall be satisfied by the payment of Thirty-seven thousand seven hundred and forty pounds in cash and Fifteen thousand pounds in fully paid shares.

(b) To purchase from the said John Geoffrey Donaldson the mineral claims and water rights set forth in the Second Schedule hereto. The purchase price to be paid to the said John Geoffrey Donaldson is Four thousand five hundred pounds and at the option of the said John Geoffrey Donaldson shall be satisfied by the payment of Four thousand five hundred pounds in cash or the equivalent thereof in face value in fully paid shares.

The priority granted to Shareholders in Blue Spec Mining Company No Liability to apply for 280,800 Shares in Northwest Tantalum No Liability has been granted in consideration of facilities and technical assistance provided to the option holder during investigations carried out on the above-mentioned mining properties.

The Company proposes to issue 6,000 Shares credited as Fully Paid to 5/- per Share to the University of Western Australia. The issue of these Shares is intended as an acknowledgment of technical services rendered to the Mining Industry by Australian Universities.

REPORT BY MR. JOHN S. FOXALL, B.E., M.I.E. (Aust.).

(Prepared for inclusion in the Prospectus.)

SUMMARY FROM REPORT DATED 28th APRIL, 1953.

1. The Pilbara leases of Tantalite Ltd. are situated in an area which, so far as it has been tested, appears to be rich in the minerals tantalite, columbite, tin and beryl.
2. Rich ore has been won by selective mining from the pegmatite dykes in which they occur, but there is insufficient information available to assess the potential value of such dykes. There is nothing to indicate, however, that they will be less productive at depth than they have been near the surface. The deepest workings are about 100 feet on the underlay.
3. There are proved reserves of easily worked eluvial ground on the leases to the value of £250,000, with indications of more.
4. Plant and mining stores to the value of £20,000 to £30,000 are on the leases, which with some additions and replacements

(Continued on next page)

NORTHWEST TANTALUM NO LIABILITY (Contd.)—

could be got into working condition to commence full scale operations in a comparatively short space of time at a cost of, say, £20,000.

5. If it is proposed to work on a much larger scale than that worked by Tantalite Ltd, additional sources of water supply must be located. It is considered that sufficient supplies can be obtained.
6. A market for all the tantalite or columbite that can be produced on these leases is available for the next 3½ years at good prices.
7. This appears to be an attractive proposition and a sound mining venture.
8. Should the option be taken up, it is strongly recommended that every endeavour should be made to secure the services of Mr. A. L. Kennedy in an advisory capacity, as his knowledge of the district, mineral occurrences of workings is unique.

STOCK EXCHANGE LISTING.

INVESTIGATING ACCOUNTANTS FOR THE ISSUE:

HANCOCK & WOODWARD, 352 Collins Street, Melbourne, Charte Accountants (Aust.).

OBJECTS OF THE ISSUE:

Although the Company is a Public Company it is still class for taxation purposes as a Private Company. The object of t issue is to give a further spread of shares to qualify the Compa as a Public Company for taxation purposes and for listing on t Stock Exchange. The proceeds of the issue will be used to prov additional finance for the expansion of the Company's operatio

DIVIDENDS:

These shares will rank for dividend pari passu with all oth fully paid ordinary shares in the Company as from the First D of July, 1953. It is not proposed to pay an Interim Dividend respect of the current financial year until after the closing of t issue when all Ordinary Shares then issued will be entitled such Interim Dividend as the Directors declare. As from the fi day of July, 1954, it is proposed to pay dividends quarterly.

It is expected that the Directors will be able to recomme payment of dividends at the rate of not less than 16% per annu

STOCK EXCHANGE LISTING:

Application will be made as soon as possible for quotation all issued shares of the Company on the Stock Exchanges of M bourne and Sydney.

CONDITIONS OF THE ISSUE:

1. The issue is being made at a premium of 3/6 per share.
2. The shares are payable in full on application.
3. It is a condition of the issue that the whole or any p of the aforesaid premium may be used for the purpose of payi

a dividend. The Directors wish to make it clear that there is no present intention of applying the premium for this purpose and the condition is inserted in order to safeguard the Company's rights having regard to Section 48 (2) of the Companies Act 1938.

4. Upon allotment the fully paid shares will be converted into ordinary stock units of 5/- each.

5. On the Fifth day of September, 1951, the holders of the original 30,000 preference shares in the Company agreed to reduce their participation rights from 12% to 10% in return for an undertaking by the Directors that when the Company made an issue of ordinary shares to the public for the purpose of qualifying the Company for listing as a Public Company, the Directors would offer to those preference shareholders £10,000 nominal value of ordinary shares for subscription at par. Pursuant to that undertaking the Directors will simultaneously with this issue offer to the holders of the preference stock units representing the 30,000 original preference shares 40,000 ordinary shares of 5/- each for subscription pari passu at par.

EXTRACTS FROM REPORT OF INVESTIGATING ACCOUNTANTS:

You have informed us that Mobile Industrial Equipment Limited, which was incorporated in Victoria on 23rd September, 1947, and which now has a Nominal Capital of £1,000,000 proposes to make the following share issues:—

1. 40,000 Ordinary Shares of 5/- each to be issued at par for cash to the original Preference Shareholders in accordance with an agreement made between the Company and the Preference Shareholders on 5th September, 1951, whereby the Preference Shareholders agreed to reduce their dividend participation from 12% to 10% as from 1st July, 1951	£10,000
2. 100,000 Ordinary Shares of 5/- each to be issued to the public for cash at a premium of 3/6 per share ..	25,000
	£35,000

ISSUED CAPITAL:

When these share transactions have been completed and assuming that both these issues are fully subscribed the Issued Capital of the Company will then be:—

90,000 5% Cumulative Preference Shares of £1 each fully paid participating to 10%	£90,000
1,220,000 Ordinary Shares of 5/- each fully paid	305,000
TOTAL ISSUED CAPITAL	£395,000

You have requested us to prepare the requisite certificate for inclusion in the Prospectus of the Public Issue and in accordance with your instructions we have investigated the audited accounts of Mobile Industrial Equipment Limited for the five years ended 30th June, 1953, and those of its Subsidiary Companies from the dates of incorporation to 30th June, 1953, which is the latest date to which the accounts of the Companies comprising the Company Group have been prepared.

PROFIT RESULTS:

The Consolidated Net Profits of the Company Group are set out hereunder.

In compiling this table we have made such adjustments to the declared Net Profits as in our opinion are appropriate but no allowance has been made for any additional profit which may be earned through the introduction of the proposed new Capital.

At present Mobile Industrial Equipment Limited is regarded as a "Private" Company for Taxation purposes. You have informed us that it is intended to apply for listing of the Company's Issued Capital on the Melbourne Stock Exchange as soon as practicable after the completion of the proposed capital issues and consequently in the following table we have assumed that the Company will be taxed as a "non-private" Company.

	Year Ended 30th June				
	1949	1950	1951	1952	1953
Adjusted Consolidated Net Profit of the Companies comprising the Company Group after providing for Income Tax at rates now applicable to public Companies	£4,680	£19,883	£55,457	£87,875	£71,687
Less Amount required for Preference Dividend on basis of Preference Capital participating to 10%	9,000	9,000	9,000	9,000	9,000
Balance available for Ordinary Dividends and Reserves	Nil	£10,883	£46,457	£78,875	£62,687
Percentage of Balance available for Ordinary Dividends and Reserves on—					
(a) Paid Up Capital at the end of each Financial Year ..	—	11.25%	19.62%	33.32%	23.52%
(b) Issued Ordinary Capital of £305,000	—	3.56%	15.23%	25.86%	20.55%

DIVIDENDS:

The rates of dividend declared by Mobile Industrial Equipment Limited in respect of the three years ended 30th June, 1953, expressed as a percentage of the Paid Up Capital at the dates of declaration are stated as follows:—

	1951	1952	1953
5% Cumulative Preference Capital participating to 12% to 30th June, 1951, then reduced to 10% participation	15% (including 3% bonus dividend)	11% (including 1% bonus dividend)	10%
Ordinary Capital	31.5%	22.625%	17%

During the period covered by our investigation the Company made two distributions out of an Assets Revaluation Reserve Account which was created by the revaluation of the item Goodwill and Patents, which asset was subsequently acquired from Mobile Industrial Equipment Limited by one of its Subsidiary Companies, Mobilco International Patents Proprietary Limited.

The distributions, viz., £75,000 on 4th July, 1950 and £100,000 on 5th January, 1951, were made to the Company's Ordinary Shareholders and were satisfied by the issue of fully paid Ordinary Shares.

FINANCIAL POSITION:

A summary of the Adjusted Consolidated Statement of Liabilities and Assets of Mobile Industrial Equipment Limited and its Subsidiary Companies is set out hereunder.

This Statement has been prepared as at 30th June, 1953, to illustrate the financial position that would have been disclosed at that date if—

(1) The proposed capital issues had been fully subscribed and the total funds received therefrom had been applied as follows:—

(a) Increase in Working Capital	£50,000
(b) Payment of estimated expenses of the new Issues	2,000
	£52,500

(2) The Uncalled Capital on 25,620 Ordinary Shares of 5/- each paid to 2/6 per share had been paid.

(3) The monies due on shares issued to employees had been paid

(4) Loans to Directors amounting to £2,467 had been paid

(Members of The Stock Exchange of Melbourne, who have underwritten and taken firm the whole of the 50,000 Shares offered in this Prospectus.)

OBJECT OF THE ISSUE:

The issue is being made to provide capital for the purchase of new plant and additional working capital.

EXTRACTS FROM INVESTIGATING ACCOUNTANTS' REPORT:

P. C. Grosser & Co. Limited has recently acquired a controlling interest in The Economy Carton & Paper Co. Pty. Ltd. by the purchase of 200 shares of the Issued Capital of 301 Ordinary Shares of £1 each in that Company. The purchase consideration was satisfied by the issue to the vendor shareholders of 73,090 10/- Ordinary Shares at par in P. C. Grosser & Co. Limited.

When the proposed Preference issue has been made, the Paid Up Capital of P. C. Grosser & Co. Limited will be £207,545, made up of 50,000 6% Cumulative Preference Shares of £1 each and 315,090 Ordinary Shares of 10/- each.

In accordance with your instructions we have made an investigation of the Accounts of P. C. Grosser & Co. Limited (known as Queen City Printers Pty. Ltd. until 1st August, 1950) and of McGill Pty. Ltd., the assets and liabilities of which Company were purchased by Queen City Printers Pty. Ltd. on 30th June, 1950, and of The Economy Carton & Paper Co. Pty. Ltd. from 1st July, 1948 to 30th June, 1953, that being the latest date to which the Accounts of the Companies have been made up. We report as follows:—

PROFITS OF PAST YEARS:

The Net Profits of P. C. Grosser & Co. Limited for the five years ended 30th June, 1953 (including therein the Net Profits of McGill Pty. Ltd. for the two years ended 30th June, 1950) and of The Economy Carton & Paper Co. Pty. Ltd. for the five years ended 30th June, 1953, after making such adjustments as we consider necessary, are set out below. We have made no allowance for any saving of interest or additional profit which may result from the introduction of the new capital, or for any variation in expenses which may result from the acquisition of a controlling interest in The Economy Carton & Paper Co. Pty. Ltd. We assume that the two Companies will be classed as Public Companies within the meaning of the Income Tax Assessment Act.

	Year ended 30th June 1949	1950	1951	1952	1953

NET TANGIBLE ASSET COVER.

The net tangible asset cover for each £1 preference share is £4/10/10 per share.

RIGHTS ATTACHING TO PREFERENCE SHARES:

The Articles of Association of the Company provide that holders of preference shares shall be entitled:—

(a) To be paid out of the profits or the Company as a first charge a cumulative preferential dividend at the rate of £6 per cent. per annum on the capital for the time being paid up thereon.
(b) In a winding up to rank as regards return of capital and payment of arrears of dividend down to the commencement of the winding up (whether earned or declared or not) in priority to all other shares in the capital of the Company, but not to any further participation in profits or assets.
(c) To receive notice of General Meetings and be present thereat.
(d) To vote at any General Meeting if it has been convened for the purpose of reducing the capital or winding up or sanctioning the sale of the undertaking of the Company or a resolution is to be submitted directly affecting the rights or privileges of the holders of preference shares or if the preferential dividend is in arrear more than six months after the close of the Company's financial period.

MODIFICATION OF RIGHTS:

The Articles of Association provide that the rights attached to preference shares may be altered with the approval of a resolution passed by a majority consisting of the holders of at least three-fourths of the issued shares of that class passed at a special meeting of such holders or in the event of the necessary majority not having been obtained at such meeting by the consent in writing of the holders of at least three-fourths of the issued shares of that class within two months of the date of the said Special Meeting.

FURTHER PREFERENCE SHARES

The Company's Articles of Association further provide that—

(i) No shares shall be issued ranking in priority to the said 50,000 preference shares.
(ii) The Directors may from time to time issue further preference shares ranking pari passu with the said 50,000 preference shares with either the same or with a different dividend rate provided that if shares have been issued with a different rate and at any time dividends cannot be declared or paid in full on all such preference shares then the dividends to be declared or paid (either before or in a winding up) shall in each case bear the same proportion to the full dividend payable thereon.
(iii) The total nominal value of all preference shares issued and outstanding at any time shall not exceed two-thirds of the total nominal value of all ordinary shares issued and outstanding at that time.

It is proposed to amend the Article relating to the right to issue further preference shares by adding the following clause:—

"There shall be no such further issue of preference shares ranking pari passu with the preference shares already issued unless the Auditors of the Company shall certify that in their opinion the net tangible assets of the Company are (or will upon issue of the proposed shares be) sufficient to provide a cover of Two pounds ten shillings (£2/10/-) for every One pound (£1) of preference capital already issued and proposed to be issued."

The necessary resolution will be submitted at the annual general meeting to be held in the year 1954 and will be submitted to a special meeting of preference shareholders prior to that date.

CONDITIONS OF THE ISSUE:

1. The issue now being made is of 50,000 6% Cumulative Preference Shares of £1 each.
2. The issue is to be made at par.
3. The sum of £1 per Share will be payable on application.
4. The Underwriting Brokers have taken firm the whole of the issue offered for subscription by this Prospectus. Consequently, no shares will be available for subscription by the general public.

DIVIDENDS:

The Shares offered by this Prospectus will rank for dividend as from the date of allotment. The Company's financial year ends on the 30th June, and it is proposed to pay dividends half-yearly in January and July. It is anticipated that the first dividend will be paid in the month of July, 1954, in respect of the period ended 30th June, 1954.

UNDERWRITING AND BROKERAGE:

All the shares offered by this Prospectus have been underwritten and taken firm by Messrs. Wm. Noall & Son, Members of The Stock Exchange of Melbourne, for an underwriting commission of nine pence per share.

CLOSING DATE:

Subscription lists will close at 5 p.m. on the Fourteenth day of December, 1953, but the Directors reserve the right to close the lists at any earlier time without notice.

STATUTORY INFORMATION

1. Copies of the full prospectus and forms of application may be obtained from the Underwriting Brokers.
   Applications for the shares of this issue must be made on the forms accompanying the prospectus.
2. (a) The minimum amount which, in the opinion of the Directors, must be raised by the issue of the shares offered for subscription by this prospectus is £50,000. This amount is required in order to provide the sums required to be provided in respect of each of the following matters:

(i) The purchase price of plant	£15,000
(ii) Preliminary expenses (including underwriting commission, £1,875)	3,000
(iii) The repayment of any moneys borrowed by the Company in respect of any of the foregoing matters	Nil
(iv) Working Capital	£32,000
	£50,000

(b) No amounts are to be provided in respect of the matters aforesaid otherwise than out of the proceeds of this issue.

Uranium Mines No Liability

(Incorporated in the State of Victoria under Part II of the Companies Act, 1938, of Victoria on the Twenty-seventh day of August, 1953.)

AUTHORISED CAPITAL: £500,000 in 2,000,000 Shares of 5/- each.

1,000,000	Contributing shares are now offered for public subscription payable 2/- per share on application and the balance by calls as and when required .. .. (1,500 of these shares have been taken by the subscribers.)	£250,000
1,000,000	Shares are to be held in reserve	250,000
2,000,000		£500,000

It is estimated that the initial payment of 2/- per share on application will provide sufficient funds to purchase all the essential plant and complete investigations on the properties at present held under option.

As these shares are issued under the "No Liability" provisions of the Victorian Companies Act, shareholders at any time not desiring to proceed further are not liable to pay further calls.

DIRECTORS:

ARTHUR HOWARD PRICHARD MOLINE, Mining Engineer, "Mayfair," Marne Street, South Yarra, Melbourne, Victoria.
FRANCIS BOARDMAN CLAPP, Company Director, 34 Martin Place, Sydney, N.S.W.
KENNETH WILLIAM CRAIG, Accountant, 450 Collins Street, Melbourne, Victoria.
FRANK RALPH MURRAY DRUMMOND, Company Director, Lower North East Road, Campbelltown, S.A.
HUGH WALLACE SMITH, Sharebroker, 361 Collins Street, Melbourne, Victoria.

BANKERS:

BANK OF NEW SOUTH WALES, 368 Collins Street, Melbourne, Victoria.

SOLICITORS:

ARTHUR PHILLIPS & JUST, 472 Bourke Street, Melbourne, Victoria.

AUDITORS:

COOK, TOMLINS & MIRAMS, Chartered Accountants (Aust.), 360 Collins Street, Melbourne.

LEGAL MANAGER AND REGISTERED OFFICE:

K. W. CRAIG, A. R. Bruhn & Co., 450 Collins Street, Melbourne, Victoria.

CONSULTING GEOLOGIST:

H. J. C. CONOLLY, A.R.S.M., B.Sc., 18 Greville Street South, Chatswood, N.S.W.

BROKERS:

WALLACE H. SMITH & CO., 361 Collins Street, Melbourne, Victoria (Members of The Stock Exchange of Melbourne).
CHARLES A. ORD & MINNETT, 16 Hunter Street, Sydney, N.S.W. (Members of The Sydney Stock Exchange).

OBJECTS OF THE COMPANY.

The Company has been formed, inter alia, for the purpose of acquiring, prospecting, mining and otherwise exploiting uranium ore deposits in Australasia and, in particular, in the Northern Territory of Australia, as set out below.

The Company's initial investigations will be concentrated on reservations held under option as listed below on certain areas in the Edith and Ferguson Rivers districts in the Northern Territory, where definite evidence of the existence of uranium ore has been disclosed.

To this end, steps are being taken to secure the necessary technical personnel and to purchase the equipment essential to a vigorous prospecting and development campaign on these and any other areas which may be located or over which options may be acquired.

Evidence to date discloses the occurrence of uranium bearing materials over a large number of areas of the Northern Territory, including a number discovered and held under Reservation by the Commonwealth Bureau of Mineral Resources. Certain of these areas have already been made available for development by private enterprise. It is understood, however, that further areas on which the Commonwealth wishes to carry out more detailed investigations, will be made available from time to time.

The Company's prospecting work will be conducted under the technical supervision of Mr. H. J. C. Conolly, A.R.S.M., B.Sc. Every opportunity will be taken to obtain additional options as and when they become available.

PARTICULARS OF OPTIONS HELD.

1. Option dated 5th July, 1953, expiring 31st October, 1955, from Sydney Bowker Tennyson, of Katherine, Northern Territory, in respect of all the right title and interest of the Optionor in respect of three Reservations in the vicinity of the Edith River, approximately 30 miles north of Katherine, Northern Territory, of a total area of about 11 square miles. Purchase price £10,000 per Reservation payable £1,000 on 31st October, 1953; £1,000 on 31st October, 1954, and £8,000 on 31st October, 1955, or on earlier exercise of the option.
2. Option dated 10th July, 1953, expiring 31st October, 1955, from the said Sydney Bowker Tennyson and Albert Johnson and Alfred Edward Hawker, both of Katherine, aforesaid over all the rights of the Optionors in respect of a Reservation on the Ferguson River in the vicinity of the Stuart Highway in the Northern Territory of a total area of about 10 square miles. Purchase price £15,000 payable £900 on 31st October, 1953; £3,000 on 31st October, 1954, and £11,100 on the 31st October, 1955, and such payments to be divided equally among the Optionors, or on earlier exercise of the option.
3. Option dated 22nd August, 1953, expiring 1st February, 1955, from J. O'Connor and W. J. Hore, both of Katherine, aforesaid over all the right of the Optionors in respect of a Reservation known as Reservation No. 5 located north of the Edith River and west of the Railway Line in the said Northern Territory of a total area of about 5 square miles. Purchase price £4,200, payable £200 on 31st October, 1953; £2,000 on 1st August, 1954, and £2,000 on 1st February, 1955, or on earlier exercise of the option.

The Reservations included in the said three mentioned Options have been made under the provisions of the Mining Ordnance 1939-1952 of the Northern Territory of Australia.

The options were originally taken by Mr. F. R. M. Drummond and have been assigned to the Company by Agreement dated 22nd September, 1953. Purchase price details are set out under the heading "Agreement with Vendor."

PROSPECTS FOR THE VENTURE.

The Commonwealth Government's recent announcement of measures to be taken for the encouragement of private enterprise to develop Australia's uranium resources includes the following schedule of minimum prices guaranteed to 30th June, 1958:—

Grade Per Cent. U_3O_8	Minimum price per ton of ore (dry weight) at Purchase Points specified
0.25	£10
0.3	£12
0.4	£16
0.5	£20
0.6	£24
0.7	£28
0.8	£32
0.9	£36
1.0	£40
2.0	£83
3.0	£128
4.0	£175
5.0	£224
10.0	£504

For grade intermediate between those shown, the prices for ore will be based on those specified.

Note: Higher prices may be considered in special circumstances.

The prices and terms quoted are considered to be satisfactory for the profitable working of uranium mines and encouraging for the vigorous prospecting for other deposits.

The measures adopted by the Commonwealth Government are similar to those put into operation by the U.S.A., Canadian and South African Governments.

The provision of centralised facilities by the Commonwealth Government for the treatment of uranium ores should appreciably reduce the period of time usually required to bring a mine into production. As the ore is mined, parcels can be transported to these centres for treatment, until it may become desirable to install the Company's own treatment plant.

It is the Company's intention, if and when areas are proved, to form separate companies to equip and work the deposits, and where the Company's interests are transferred to such operating companies, substantial benefits could accrue to shareholders in this Company.

As the areas already located by the Bureau of Mineral Resources and individual prospectors are so extensive, it is obvious that there will be ample scope for a vigorous organisation to obtain a share of suitable properties.

The newness of uranium mining in Australia makes it impossible, at this time, to provide financial estimates, but being guided by overseas experience, it is considered that development of our own uranium deposits may well prove to be highly profitable.

CONSULTING ENGINEER'S REPORT.

(Prepared for inclusion in the Prospectus.)

EDITH RIVER URANIUM PROSPECTS.

Arrangements are in process to enter into the search for uranium. Under these arrangements the question has come up as to whether the Edith River country should be included among the first objectives of this search. I have just paid a short visit to the area and am satisfied that the uranium showings there merit this immediate attention.

The Edith River uranium field is alongside the Darwin-Birdum Highway and Stuart Highway, about 180 miles south of Darwin. The uranium occurs in shears in granite. The shears are filled with some chilled granitic material, dense porphyry and quartz, and are really quite impressive structures of considerable length. In places along these channels the geigers kick. Calibrating the kicks as best we could, I came to the conclusion that the mineralisation at the hottest points was in the order of one-tenth of a per-cent. of uranium. To confirm this finding, I called at the Edith River camp of the Bureau of Mineral Resources. The Bureau had sampled all the points I had seen and their radiometric assays of these samples just about averaged up to the 0.1 per cent. conclusion. Quite clearly then the Edith River lodes at the surface carry uranium in very small and quite unprofitable amount.

The prospect, however, cannot be judged by surface samples. The uranium mineral is autunite. I believe there is some torbernite as well. Autunite and torbernite are secondary minerals derived from the oxidation of some primary uranium. In this oxidation, the uranium becomes soluble and highly mobile. Outcrops are leached of their uranium. The process of leaching with its migration of the metal is liable to be more thorough going and far reaching than with copper. After what I have seen recently here at Tennant Creek of the leaching of copper, the wonder in my mind is to find much uranium at all in a long weathered outcrop. These surface assays at Edith River mean nothing except the important fact that uranium is present.

In view of these findings, the really encouraging feature of the Edith River prospect is the extent of the mineralisation. I saw radioactive outcrops over an area of about forty square miles. It seems reasonable that somewhere there is a patch of good ore, and a patch of good uranium ore can yield a surprising profit. With the extent of mineralisation, the well established lode changes and this "concealment" by leaching, there is justification enough for including this country in any carefully conducted search for uranium mines. I feel that we have just got to find out what is below the leached ground here. Conceivably, there is nothing at all. The uranium, for example, can be fed into these channels from above. Alternatively, there may be at a depth of 100 or 200 feet an enriched zone of these secondary minerals. Or the autunite-torbernite directly gives way in deeper ground to some primary mineralisation of relatively (relative to the surface) good grade.

Edith River then looks to be a rational sort of prospect with a moderate prize. I recommend that we make a start here, but of course lose no time in getting hold of other prospects to spread the risk and step up the prize incentive. Testing below the leached ground can be carried out either by the diamond drills or by shaft sinking. My preference here is for a shaft.

AGREEMENT WITH VENDOR.

Options as already detailed and taken by Mr. F. R. M. Drummond have been assigned to the Company for the following consideration:—

(a) Payment to Mr. Drummond of his out-of-pocket expenses and costs incurred in securing such three mentioned Options and incidental to his services in relation to the formation of the Company and this issue of shares but not exceeding £2,000.

(b) Should one or more of such Options be exercised Mr. Drummond has the right of taking up at par shares in the capital of the Company not exceeding in the whole 120,000 shares of 5/- each for which Mr. Drummond is to make payment to the Company of a sum in respect of each share equivalent to the amount of cash then paid up on the other shares of the Company which shall have been issued for public subscription for cash and the balance in respect of each share is to be paid in calls.

(c) If the Company does not exercise any of such options but works other areas for uranium bearing ore or forms a subsidiary company for that purpose, Mr. Drummond's option is limited to 25,000 shares only.

(d) If the Company shall at any time form any company or companies (other than a wholly owned subsidiary company of the Company) for the purpose of carrying on mining operation in or upon any area the subject of any Option which the Company may hold or any area which the Company may have otherwise acquired the Company is if required by Mr. Drummond to procure from any such company or companies an option in his favour to take up at par for cash subscription and upon the same terms and conditions as may be applicable to subscribers generally shares in any such company or companies offered for subscription equal to five per centum of the number of shares of such issue.

(e) Mr. Drummond's option to take up the said 120,000 shares or any of them cannot be exercised until 18 months after the date of incorporation of the Company or until the Company forms another company (not being a wholly owned subsidiary company of the Company) to develop and work any of the areas the subject of any Option which the Company may hold or any area which the Company may have otherwise acquired or the Company itself commences to carry on mining operations in or upon any such area whichever shall be the earliest.

TAXATION.

Calls paid are allowable deductions under the Federal Income Tax Legislation as to one-third of the total amount paid.

Income from the mining of Uranium is exempt from taxation in the hands of the Company, subject to fulfilment of the conditions set out in Section 23D of the Income Tax and Social Services Contribution Assessment Act 1953. Dividends declared out of the Company's net exempt income are, under existing legislation, exempt from income tax in the hands of shareholders.

STOCK EXCHANGE LISTING.

Application will be made as soon as practicable after allotment for the official quotation of the Company's shares on the Stock Exchanges of Melbourne, Adelaide, Sydney and Brisbane.

UNDERWRITING AND BROKERAGE.

The whole of the issue has been underwritten and taken firm by Messrs. Wallace H. Smith & Co., Members of The Stock Exchange of Melbourne, for a commission (including brokerage) of 1½d. per share.

ALLOTMENT.

The Directors reserve the right to allot such number of the shares as they deem fit up to the number applied for by each applicant, and also to reject any application.

UNION TRUSTEE

Protects and Conserves

Your Assets

For the security of your dependants, the management and protection of your assets is just as important *after* your lifetime as it is now. Administration of Estates is a specialised duty that Union Trustee has faithfully performed for over 67 years. It is significant that an increasing number of people in all walks of life are appointing the Company as Executor or Trustee.

Charges are exceedingly moderate; are, in fact, limited by law. Continuity of service is assured at all times.

Call for a personal interview, or write for a copy of the free booklet — "Important Facts concerning Wills, Executors, Trustees." No charge—no obligation.

The following address was given by the Chairman, Mr. H. F. Journeaux, to shareholders at the Annual Meeting held on October 9.

Greater turnover, together with increased rents and higher dividends received from investments in other Companies, raised the year's profit above that of any previous year. Trading profit was steady, despite a slight reduction in the gross profit margin.

The year's activities, before providing for taxation, produced a profit of £103,339 as against £93,405 last year. Taxation provision at pre-Budget rates is £44,000 (last year £39,000), leaving a net profit of £59,339, compared with £54,405 last year—an increase of £4,934. In addition, the Company will benefit to the extent of £9,640 from the lower tax.

You will notice that depreciation charge this year of £16,257 is £8,771 higher than last year. Your Directors considered it prudent to increase the normal depreciation rate on the auxiliary electricity generating plant and other plant installed during the period of power and fuel restrictions. It now seems unlikely that the occasion will arise when it would be necessary to again operate them.

Balance Sheet.

General Reserve: has been raised to £200,000 by the transfer of £20,000 from the year's profit, and £41,999 is carried forward as against £36,187 brought in.

Referring to the Balance Sheet, you will note the following movements:—

Creditors have decreased by £25,198 to £35,694.
Bank overdraft at £20,502 compares with £74,410 last year.
Provision for taxation has increased by £8,900 to £44,341.
Debtors have increased by £671 to £78,525.
Stocks reduced by £40,957 to £146,523.
The effect of these changes shows:—
Current liabilities decreased by £67,128 to £127,836.
Current assets decreased by £40,684 to £227,671.

An improvement in the liquid position of £26,444 which, you will agree, is a very sound position.

The supply of overseas raw materials has improved considerably and, as anticipated in my address last year, a steady reduction of stock has occurred, resulting in the lower Bank overdraft.

Dividends and Reserves.

The Board recommends the payment of final dividends of 4½%, making 9% for the year on "A" preference shares; the payment of 4½%, making 9% for the year on "B" preference shares; and 8¾%, making 15% for the year on ordinary shares. 1½% of ordinary dividend is from tax-paid funds.

Your Directors are particularly pleased to be able to recommend an increase of 1¼% for the year on ordinary shares.

The following comments will be of interest to you:—

Total reserves and unappropriated profits, after allowing the dividend recommended today, now total £278,767—five years the figure was £159,743, and the net tangible asset cover for 5/- ordinary share has been raised from 5/8 to 14/4. The conse tive policy of retaining these reserves from profits has prov adequate working capital and funds to meet permanent capital penditure.

Over the same period the dividends paid on ordinary sh have been lifted from 8¾% to 15%, but the percentage of profi total funds employed in the Company's activities has decreased 12.1% in 1948 to 10.6% this year.

Premises and Expansion Plans.

For several years past, and the post-war period in partic the Company has had to forego opportunities for expansion bec of space limitations for manufacturing. I am now pleased to that plans are in hand for us to acquire additional space in the Riverside Avenue building early next year, and that the whol this building should become available to us by June, 1955, at w date Kraft Foods Limited, the Company's tenant, has undert to vacate our premises.

With this in view your Directors sent the Company's Ge Manager, Mr. G. C. Barry, to England and the United State America for four months this year to study overseas produ methods, latest mechanical developments and new products sui for the Australian market.

It is gratifying for me to be able to report to you that num valuable ideas, which lend themselves to the Company's plan expansion, have been obtained, and that the implementation of will become possible as the additional space becomes available.

It is also a source of great satisfaction to learn from Mr. Ba report that, by general standards, we are well equipped with and organisation to face the future with confidence.

Conclusion.

In conclusion, I wish to pay a tribute to our staff and al employees. It is their loyal work and co-operation which has tributed so largely to the year's result and I wish to expres behalf of the Directors, thanks for the support given.

Year ended June 30, 1953. Meeting September 25, 1953.

Sales for the year totalled 96,143 tons, being 38% lower than last year. Profit receded by £496,529 to £545,587, and an ordinary dividend of £575,500 paid to The Australasian Paper & Pulp Co. Ltd. allowed the usual 8% preference dividend and a 4% ordinary distribution for the year by that company.

Directors report that by January, 1953, sales had improved and have continued to do so, and that over the past few months sales and profits have been satisfactory.

Five mills at Broadford, Fairfield, Maryvale and South Melbourne in Victoria, and at Botany, N.S.W., produce kraft and sulphite wrapping and processing papers, also box carton and container boards, serving the needs of many industries. The Maryvale mill produced 36,307 tons of wood pulp to supplement imported supplies.

Although some projects in the construction programme have been deferred, activity on other works has been resumed.

Legal difficulties have hindered progress towards elimination of the holding company—The Australasian Paper & Pulp Co. Ltd.—but Directors hope to proceed in the coming year.

Net tangible asset backing (book values)—6% pref., £6/17/7, after allowing for uncalled ord. capital and premium. The ordinary shares are not listed.

The following are extracts from the Report of the Directors circulated to shareholders with the Annual Accounts:

The year has been one of the most difficult in the Company's history.

The sales for the year ended 30th June, 1953, were only 96,143 tons as compared with 154,662 tons and 147,892 tons for the years ended June 30, 1952 and 1951, respectively.

In common with the paper industry throughout the world, and in common, too, with some other manufacturers in Australia, the Company suffered a severe recession in the demand for its products during the latter half of 1952. In Australia the immediate reason for the reduced demand was, in the opinion of your Directors, the accumulation of heavy stocks by consumers of paper products, due to unusually large importations during 1951 and the early part of 1952.

Owing to the fall in sales the Company had to reduce its output of papers and boards and wood pulp, particularly in the first half of the financial year. The total production of papers and boards for the year was 102,317 tons as compared with 160,037 tons last year. The production of Maryvale Pulp Mill was 36,307 tons of wood pulp as against 47,535 tons in the previous year. These reductions in output caused higher production costs, and the Company was handicapped by big falls in the value of stocks of raw materials, particularly imported wood pulp.

By January, 1953, sales had improved and have continued to do so since then. Over the past few months sales and profits have been satisfactory.

Dividends.

After considering the present position, assessing the future prospects and taking account of the profits accumulated in previous years, your Directors recommend a final ordinary dividend for the year of £558,000. This dividend is payable to The Australasian Paper and Pulp Co. Ltd. and will enable it to pay a final preference dividend of 4% and an ordinary dividend of 4%.

Your Directors regret that owing to the facts above stated the Company did not pay an interim ordinary dividend sufficient to enable The Australasian Paper and Pulp Co. Ltd. to pay an interim dividend on its ordinary stock.

Construction Programme.

The Company's trading position and the Australian economy generally made it necessary to review the expansion programme and to defer certain projects. Over the last few months the pany has resumed some construction activities, and it will ahead again with the various projects at the appropriate t Your Directors are satisfied with the basic soundness of the gramme, but circumstances have made it necessary to pr more slowly than had been planned.

Tariff Protection.

The Company has applied for increased rates of duty o types of papers and boards manufactured by A.P.M. It was sary to seek increases in duty, because the decreasing valu money over the years had materially lessened the effect of d of fixed monetary amounts per ton and because of the trend of Australian costs vis-a-vis costs overseas during a p when overseas competition was intense.

Capital.

During the year an issue of £1,793,741 in 6% preference s of £1 each was made at par. The issue was oversubscribe conjunction with the issue, an amount of £50,000 from the Premium Account was capitalised and distributed in shares special capital dividend amongst the holders of the previ issued preference shares.

At an Extraordinary General Meeting on October 27, 19 resolution was passed converting all issued and fully paid s into stock units of £1 each and providing that shares not al issued or fully paid up would be converted into stock upon issued and fully paid up.

These changes in the capital of the Company required c amendments to be made to the Articles of Association. opportunity is now being taken to revise the Articles gene and these revised Articles will be submitted to stockholder their approval at an Extraordinary General Meeting to be immediately after the Annual Meeting.

Proposed Elimination of The Australasian Paper & Pulp Co.

In last year's Annual Report reference was made to a posed scheme to eliminate The Australasian Paper and Pul Ltd. which holds all the ordinary stock in your Company tralian Paper Manufacturers Ltd.), so that all stockholders hold their equity directly in Australian Paper Manufacturers Some unforeseen legal technicalities have arisen concerning

cheme which have delayed the formulation of final proposals. Your Directors are hopeful that ways will be found of overcoming he difficulties, so that the scheme can be proceeded with during he current financial year.

Staff.

The period has been a strenuous one for all staff and employees, and the Board expresses its thanks to them for their ervices during the year. Unfortunately, it was necessary to stand lown some operating employees for varying periods, but your Directors are pleased to report that re-employment has been ffered to all of these employees. The company has made considerable progress in economies and improved efficiencies and in he main the long term prospects are encouraging.

At the Annual Meeting held in Sydney on September 25, the Chairman, Mr. Telford Simpson, made the following remarks:

Trading Conditions and Future Outlook.

Trading activity since the close of the financial year has continued to be satisfactory and has remained at about the same evel for the last few months. This levelling off tendency has been ascribed to a cautiousness in industry pending the release of the atest Commonwealth Budget. As a result of the confidence engendered by the Budget, it is felt that the demand for the type f product manufactured by your company should tend to increase during the balance of the financial year.

Taxation.

The accounts of the Company, which were prepared before it was known that the rate of company taxation was to be reduced rom 9/- in the £ to 7/- in the £ made a provision of £256,500 for ncome tax. Following the reduction in the rate of tax, this mount will be excessive by £95,000 which in effect becomes an ddition to the net profit for the year and to the amount to be arried forward in the Profit and Loss Account. While the reduction in the rate of income tax is a welcome relief, the allowances s deductions for depreciation and replacement of fixed assets emain inadequate.

Costs in Australia.

In general the Budget could have done more to assist in orrecting the position of Australian costs being so much higher han those of the United Kingdom and other countries overseas. n the opinion of your Board the Government should make more ttempt to assist cost reductions by removing those taxes which hemselves increase the cost of goods and services and add to he escalation of the basic wage. The reduction in payroll tax is egligible, and this tax and several others still add materially to he cost of all goods and services in Australia. The cost (at the urrent rate of exchange) of a paid hour for labour in Australia s some 80% to 90% higher than the equivalent cost in the United ingdom.

It would appear that the recent decision of the Arbitration Court doing away with the quarterly adjustment of the basic wage will do something towards preventing an increase in costs in that the decision attempts to stabilise wages and costs, but something must be done to reduce costs still further if we are to be sure of maintaining our standard of living and of meeting competition for our goods from overseas.

Tariff Review.

The Company's application for increased rates of duty on the types of imported paper and board which compete with A.P.M.'s products is covered in the sales section of the Annual Report. I had hoped to be able to give you details of the recommendations of the Tariff Board, but as yet these have not been presented to Parliament.

Continuous Operation.

The Annual Report mentions that the pulp mill at Maryvale had commenced operating continuously seven days per week. Since that report was written this method of working has also been introduced on the new No. 5 machine at Fairfield and will be introduced elsewhere as the demand for our products increases. This is a major development for the company which, besides increasing output, will be of material assistance in reducing costs.

The Board.

Before concluding my remarks, I wish to refer to the resignation of Mr. G. W. Ellis, Assistant Managing Director, which has already been reported in the press. His resignation will take effect as from October 31 next. I should like to place on record the Board's appreciation of his splendid service, its regret at losing him, and its best wishes to him for the future.

On behalf of the Board and the stockholders, I express to Mr. C. S. Booth, our Managing Director, our sincere appreciation of his untiring and efficient service to the company during the year. Mr. Booth was appointed Managing Director in 1948 for the period of five years, the maximum period permitted under the Company's Articles. I am glad to say that Mr. Booth, at the unanimous request of the Board, has agreed to continue his service as Managing Director for a further period of five years.

The Board has been conscious for some time of the rapidly growing and heavy burden of responsibility resting on the Managing Director. In February of this year, in order to relieve the Managing Director and to enable him to share some of this responsibility, the Board appointed Mr. J. G. Wilson Deputy Managing Director of the Company. Mr. Wilson has carried out the duties of his position with conspicuous ability, and the Board thanks him for all that he has done. The Board also expresses its appreciation of the excellent work during the year by Mr. G. W. Ellis as Assistant Managing Director in charge of operations, and by Mr. R. B. Jeffreys, Technical Director.

Formed as a public company in April, 1951, the company functions through a group of subsidiaries as wholesalers and retailers of electrical, radio, and refrigeration equipment, and of major appliances. Details of three new subsidiaries and the acquisition of Velco Sound Systems Pty. Ltd. are given in the chairman's address herewith.

Stocks fell by £89,840 but debtors rose by £17,860. Public company securities rose by £93,872 to £179,216, and are being held temporarily pending a decision on hire purchase finance plans.

Turnover was lower than in 1951/52, due partly to shortage of hire-purchase funds. To remedy this position a separate subsidiary, Corartie Pty. Ltd. is to raise £430,300, partly in cash and partly to acquire certain interests of the chairman and other directors of the holding company, consisting of investments in public companies. The holding company's interest is to be converted to £200,000 6% cumulative participating preference shares in Corartie Pty. Ltd.

In addressing shareholders at the Annual Meeting held on October 15, the Deputy Chairman, Mr. A. J. Moir, said:—

Reference to the consolidated Statement of Profit and Loss for the year shows that the Company and its Subsidiaries made a nett profit (after provision for taxation and depreciation, and the payment of Directors' Fees) of £68,320.

In view of the difficulties experienced from many quarters during the year, this result is considered to be satisfactory.

The appropriation of the year's profit is clearly set out in the Statement, and I do not propose to make any comments thereon.

Balance Sheet

Comparisons between the various Balance Sheet items as at June 30 last, and June 30, 1952, are shown, and I would draw your attention to the stock figure, which is considerably less than that of a year ago, the investment figure, which is greatly in excess of the 1952 amount and the bank overdraft, which is also in excess of that at the end of the previous year.

The stock figure is now more in keeping with requirements, and the proceeds realised by the sale of surplus stocks were invested in Public Company securities, pending a permanent decision concerning Hire Purchase Finance plans. The cost of improvements to the various premises occupied by the Companies within the Group, was substantial, and this, together with the sum invested in Hire Purchase Finance over extended periods, has contributed to an increase in the Company's overdraft which, however, is not large in relation to the ramifications of the organisation. There was also an increase in the amount "Mortgage on Property," which was occasioned by a further small loan from The Temperance & General Mutual Life Assurance Society Ltd.

Dividend

You will note that a final dividend of 5% (6d. per stock unit) is recommended, making 9% (10.8d. per stock unit) for the year. This represents an increase of 1% over the previous year when 8%, half of which was tax free in stockholders' hands, was paid.

I will now proceed to refer to some of the more important aspects of the year under review.

Trading Conditions

Conditions generally for the year ended June 30 last proved difficult. Stocks within the industry were very high, and there were attempts on the part of traders generally to reduce stocks, irrespective of profit margins. Again, moneys available for Purchase transactions were limited, as also were moneys for building industry, with the result that alterations to and expansion of homes, industrial premises, and the like, were red to a minimum. All of these things contributed to a lower t over of Companies within the Group, and this, together wi rise in costs, caused a reduction in nett profit for the year. Directors are very conscious of the need for a vigorous policy, and the control of costs. A number of steps taken thro out the year are now showing results.

Hire Purchase Finance—Corartie Pty. Ltd.

As intimated by the Directors in their printed Report, the of continuous and competitive Hire Purchase finance facilities the operating Companies within the Group has occasioned con and it has become abundantly clear to your Board that adeq finance must be forthcoming, and that this finance must be s able on conditions which will enable your Company to meet, s times, terms and conditions offered by our competitors.

A plan has been evolved, therefore, whereby Corartie Pty. a wholly-owned Subsidiary Investment Company, will, by alter to its capital structure, and by acquisition of the issued shar Vealls Finance Pty. Ltd., become the Finance Company for operating Companies in the Group. Proposals are as follows

Corartie Pty. Ltd. will have its present issued capital incr to £200,000 by capitalising the amount standing to the cred the investment revaluation reserve and the amount represent advances made by the Holding Company. The increased ca of £200,000 will all be held by your Company, and will be conv to 6% cumulative preference shares of £1 each, fully particip with ordinary shares, and with full voting rights.

New capital, in the form of ordinary shares, will be introd An initial issue of 430,300 ordinary shares of £1 each has made, partly for cash, and partly to acquire certain interes the Chairman and the other Directors of your Company. interests consist of investments, being stocks and shares he listed Public Companies.

Treasury consent has been obtained to the proposed i mentioned by me.

The effect of the proposals outlined will be that Corartie Ltd., and Vealls Finance Pty. Ltd., will cease to be wholly-o Subsidiaries of A. J. Veall Electrics Limited, but your Comp interests will be fully protected by the holding of £200,000 o preference shares, fully participating with ordinary share Corartie Pty. Ltd., and with full voting rights.

It is confidently believed these proposals will provide a large proportion of the necessary Hire Purchase requirements of the operating Companies, and that they should not experience difficulties similar to those of the past year or so.

Alterations to Premises, etc.

During the year, your Directors continued to carry out improvements to premises occupied by the various Companies in the Group, and I can now report that the Showrooms at 490 Elizabeth Street are among the finest in the State. New shop fronts and interior fixtures, etc., are being installed at 243 Swanston Street, and 299 Chapel Street, Prahran, improvements have been carried out on premises at 3-5 Riversdale Road, Camberwell, and generally there has been a steady improvement in our presentation to the public. In addition, the Wholesale Warehouse at 37 Therry Street is now functioning in a most efficient manner.

New Subsidiaries

During the year, the following new Subsidiaries, with the functions outlined, were formed:

Vealls Electric Showrooms Pty. Ltd.—To operate the showrooms at 490 Elizabeth Street.

Vealls Finance Pty. Ltd.—To handle a limited number of Hire Purchase transactions.

Vealls Radio Tape Recorders Pty. Ltd.—To handle the sale of Tape Recorders, etc., manufactured by Velco Sound Systems Pty. Ltd.

Velco Sound Systems Pty. Ltd.

During the year, all of the issued shares in Velco Sound Systems Pty. Ltd., a Company manufacturing power amplifiers and ancilliary equipment, tape recorders, etc., and a Company that has been installing and servicing major appliances sold by the operating Companies in the Group, were purchased for cash on most favourable terms, and the profits earned by that Company are included in the consolidated profits of the Group. At the present time, Velco Sound Systems Pty. Ltd. is operating on a profitable and satisfactory basis.

Mr. P. C. Wells

In May of this year, Mr. P. C. Wells retired from the Board, and also from the position of Manager of the retail Subsidiary Companies. It is not proposed for the present to fill the vacancy thus created on the Board.

Mr. C. Sinclair, an executive of some 14 years' standing with the Company, has been appointed to the position of Manager of the retail Subsidiary Companies.

Trade Relations

Our representatives cover the whole of the State regularly, and their relations with members of the electrical, radio, and refrigeration industry continue to be of the most cordial nature. Executives of the Company are in constant touch with manufacturers in the Commonwealth, and with the latest developments in the industry.

Future Outlook

Your Directors view the future with confidence. They feel that your Company, in common with many others, has passed through a most difficult period, but that with a more confident tone prevailing throughout the community, with the relief in taxation granted in the latest Federal Budget, and with turnover for the three months ended September 30 last considerably greater than for the comparable period of 1952, they believe we can look forward to a successful year.

A matter of considerable importance to your Company is the arrangement made in February last with Westinghouse Roseberry Pty. Ltd., a Subsidiary of Email Limited, whereby your Company is handling the distribution of Westinghouse Electrical Home Appliances on an exclusive wholesale basis throughout Victoria, and of course through its retail outlets also. With the support of the manufacturer, it is anticipated that this line alone will mean a substantial increase in turnover and profits; results to date have greatly exceeded expectations, and they have not yet reached their peak. With this range of appliances, together with such valuable and well-established lines as Kelvinator products, and many other well-known national lines, for which the retail Companies in the Group are large outlets, your Directors believe that the operating Companies will continue to enjoy volume turnover, with consequent satisfactory net profits.

Staff

It is fitting that before I conclude this address I should advise that all members of the staff of the various Companies worked hard during a very difficult year, and on your behalf, and that of your Directors, I would extend to them appreciation and thanks.

Bowrings (Australia) Limited

Reg. Office: Cnr. Eighth St. and Deakin Ave., Mildura, Vic. **Directors:** W. J. Bowring (Chairman), C. M. Bowring, W. B. Bowring, J. H. Bowring, J. G. Hartley. **Auditor:** L. H. N. Hollick.

3rd Year ended May 31, 1953. Meeting September 28, 1953.

Despite increased expenses the gross profit margin was maintained on higher turnover, and the net result at £18,426 was nearly £5,000 higher than last year. A 7% dividend rate for ordinaries was continued.

The group's activities include—

Ansett Hotels Pty. Ltd.—Interested in 19 hotels, including Hotel Manyung (Mt. Eliza, on the Mornington Peninsula).

Road Services.—Pioneer Tourist Coaches Pty. Ltd. operates a fleet of 87 vehicles on routes from Hobart to Cairns and Adelaide. Pioneer Tours (N. Qld.) Pty. Ltd. operate around Cairns and the Atherton Tableland; Eastern Roadlines Pty. Ltd. operate in Eastern Victoria; Southern Coachlines Pty. Ltd. are in the Healesville district.

Ansett Airways Pty. Ltd.—Operates to all Capital Cities except Perth, and to a number of provincial centres in N.S.W., Vic., S.A. and Tas. Passenger revenue declined but freight revenue improved. Details of negotiations with the Government are given in the Chairman's Address herewith.

Manufacturing and Trading.—Due to the reduced demand for tourist buses, Ansair Pty. Ltd. has extended its activity to manufacture commercial vehicles and repairs.

Liberty Motors (Aust.) Pty. Ltd.—In addition to Fork Lift Trucks, Jowett Cars and Bradford Trucks, this subsidiary now handles Austin vehicles.

Net tangible asset backing (book values in consolidated balance-sheet), excluding road licences and goodwill—Pref., £5/17/8; ord., £1/1/10.

At the Annual Meeting held on October 28, the Managing Director, Mr. R. M. Ansett, reported to shareholders as follows:

That we have achieved some success is, I think, borne out by the improvement of £157,000 in our results for the year just ended as against the previous year. Although shareholders will no doubt be disappointed at not receiving a dividend, I am sure you will agree with the Directors that, at this stage, we should conserve our resources with a view to putting value back into the company's shares.

Commenting on the company's Balance Sheet as at June 30, 1953, it will be noticed that great strides have been made in consolidating the overall financial position. The consolidated bank overdraft has decreased by approximately £200,000. Trade creditors have also been reduced by £219,000, and the liquid position is now much healthier than it was twelve months ago.

It will be noticed that stocks, stores and work in progress have decreased by £204,000, and I might add that further reductions are still taking place.

No doubt shareholders will have noted that the contingent liability which appeared in our accounts in respect to air route charges claimed by the Commonwealth, and which last year totalled £118,429, has now been eliminated. A compromise was negotiated with the Commonwealth, and the claim was settled for £39,476, of which the company had provided an amount of £34,393. The elimination of this contingent liability, together with other movements disclosed has we believe, considerably strengthened the company's Balance Sheet as at June 30, 1953.

The decline in total revenue was substantially brought about by the fall in the turnover of Liberty Motors—a condition which was general in the motor industry during 1952/53.

Speaking generally, I can say that your Board, bearing in mi all the circumstances, is satisfied with the recovery achieved du ing the year, and is looking forward, with confidence, to furth substantial improvement in the current and future years.

Pioneer Tourist Coaches Pty. Ltd.

Last year I advised that our programme for replacement vehicles had been curtailed, but I am pleased to advise that orde have been placed with Ansair Pty. Ltd. for the supply of a furth twenty-four Flxible coaches to be delivered at the rate of one ea month during the next two years. Designed with rear engines, t Flxible Clippers are practically vibrationless and noiseless, and they are of "all metal" construction they are still a long wa ahead of any competitive coach, and we are looking forward having these vehicles on the road for many years to come.

The results of Pioneer in the year under review have justifi my statement at the last Annual Meeting when I said that despi two bad years Pioneer would prove to be a subsidiary with a goo potential and without question would show satisfactory retur and prove a good solid investment for Ansett Transport Industrie

Pioneer Subsidiaries.

These companies have shown considerable progress during t year under review. I cannot say they have all shown us an ad quate return on investment, mainly because it was not possib during the period to introduce larger and more economical vehicl on these services. However, we have now introduced a small nu ber of larger seating capacity vehicles, and with the addition one or two more such vehicles which will shortly be availabl these two companies will be able to contribute satisfactorily to o profits.

Ansett Airways Pty. Ltd.

As was general with all airlines, passenger revenue showed a ght decrease, and the increase in overall revenue is accounted by the growth in the company's air freight division.

During the year 2,962 tons of freight were carried on our ser- es. This was an improvement of 723 tons over the previous r. The overall growth of air freight in Australia has been rmous in the past few years, and it is a most important de- opment for all aviation companies, enabling any capacity not en up by passenger traffic to be utilised.

We are often asked the question as to what this subsidiary l do to replace its existing aircraft. Firstly, I would like to ure shareholders that, mechanically, our present fleet of air- ft is perfect, and from that point of view there is no necessity consider replacement. The DC3 aircraft will be used in com- rcial services all over the world for many years to come. It is proved to be the most reliable type of commercial aircraft r built, but as other faster and more economical aircraft are ng introduced, we are naturally giving thought to the ultimate lacement of our fleet.

There are several types of aircraft about to be produced in eat Britain, one of which will probably prove to be the answer our replacement problem. From the information we already e, it will not be necessary for us to go into astronomical figures h as the present cost of first-class American aircraft.

Shareholders will recall that during the year the Federal vernment made very handsome concessions to A.N.A. in the m of mail contracts, and, indeed, went so far as to legislate t a protection be set up for their benefit in the future.

The action of the Government in its anxiety to maintain com- ition in the aviation industry was an amazing one. There are y three completely separate organisations operating inter-State services. The two private companies—of which Ansett Air- ys is one—have operated inter-State air services for sixteen rs and over, and Trans Australia Airlines, owned by the Govern- nt, entered the field only seven years ago.

Despite the fact that we are the smallest of the three airlines, company, since its inception, has operated its aircraft over re than 20,481,251 miles and carried a total of 798,487 passengers. withstanding this, the Federal Government completely left us of its calculations.

The other private airline received a gift of half the air mail, ich meant an increase of revenue to them of approximately 0,000 per annum, and in addition to receiving the benefit of islation which gives them protection from future Governments a period of fifteen years, they have also been offered a Govern- nt loan amounting to some millions of pounds to enable them replace their existing fleet of aircraft.

Naturally, I made strong representations to both the Minister Civil Aviation and the Prime Minister himself for our company receive its rightful share of the air mail, the protection, and finance for aircraft replacement. Evidently the problem was difficult for the Federal Government, which apparently thought it we just complicated the picture and so, notwithstanding our ubted rights in the matter, brushed our claims aside in its te to get the subject finalised.

Normally I am not one to indulge in attacking Governments. an find a great deal to commend the present Federal Govern- nt, but I believe the shareholders will agree with me when I that the method adopted by the Government in submitting to pressure of the influences of the two big airline operators does do it credit.

Our company carried approximately 15 per cent. of the traffic the routes on which it operates. It has an annual revenue of 00,000 and has proved by sixteen years of constant operation t it is not a "fly by night" airline company.

All I asked for was our rightful share of consideration by the vernment, and I sincerely hope that, even at this late stage, claims for fair and just treatment will be recognised.

It is extremely interesting that during the time that A.N.A. e threatening to vacate the aviation field, enquiries were made the Government as to whether Ansett Airways would, with ernment assistance, be prepared to expand and become a strong petitor to T.A.A. Our reply, of course, was in the affirmative. were of some value to the Government and may have assisted ts negotiations. The bitter pill for us to swallow is that once other private airline obtained for itself complete protection er the airline legislation and decided to continue in the avia- field, we were apparently of no further value in the eyes of Government.

This Government, or another one, will I feel sure, rectify the stices which have been done.

Whilst we have been of insufficient political or national im- ortance in the minds of the legislators, there are, of course, some ompensations, and notwithstanding the difficulties referred to ich confronted the aviation industry and our company in par- ticular, I am very pleased to report to shareholders that Ansett ways Pty. Ltd. made a profit for the financial year under re- ew, and your Directors are confident that it will continue to do so.

Ansett Flying Boat Services Pty. Ltd.

Shareholders are undoubtedly aware that Ansett Airways Pty. Ltd. controls a subsidiary company—Ansett Flying Boat Services Pty. Ltd. Prior to May, 1953, the headquarters of this company were in Brisbane.

Towards the end of the financial year, arrangements were made to acquire certain assets, including a Hythe flying boat from Trans Oceanic Airways in liquidation. This enabled us to take over that company's flying boat base at Rose Bay, Sydney, and the services previously operated by Trans Oceanic Airways. Ansett Flying Boat Services has now a much more balanced operation. The service from Sydney to Lord Howe Island operates all through the year, and intensifies during the summer months when the traffic to Hayman and the Whitsunday Islands is falling off. In addition, at the time when Hayman is closed down, the Sydney-Hobart service comes into operation.

At present, steps are being taken to consolidate Ansett Airways and Ansett Flying Boat Services.

Ansair Pty. Ltd.

Now to turn to our manufacturing company. Ansair Pty. Ltd. operated profitably during the past twelve months, although it has had some difficulty in establishing itself in fields of manufacture other than its original product — the manufacture of first-class passenger buses — the demand for which almost disappeared.

It was not easy to break into new fields in manufacturing during a time when the industry was extremely competitive, and, further, the commencement of new projects is, at any time, quite expensive. However, this has been achieved, and Ansair's greatest activity now is the manufacture of commercial vehicles, including hearses, ambulances, delivery vans, panel vans, container vans and utility bodies, and a very solid business in the repair and overhaul of buses and commercial vehicles. Our bus manufacturing line is again in operation even though it is geared for a very much lower production rate than it was two years ago.

One of our major problems at Ansair was the abnormally high stock of bus components held twelve months ago. A great number of items could only be used for bus construction, but now that we are again in production of buses, we will progressively reduce the amount of capital that has been "tied-up" on the shelves in the stores of Ansair for the past eighteen months.

Last year I said that immediate spectacular results could not be expected of this company, and although our progress in completely re-establishing Ansair has been slower than your Directors would have liked, the position has improved each month since I last addressed you, and we are no longer worried about its future.

Liberty Motors (Aust.) Pty. Ltd.

Liberty Motors, a motor car distributing house was, twelve months ago, very seriously overstocked with vehicles ordered prior to the sudden recession in the motor car industry. It has taken us twelve months to rectify that position. We have found the Jowett vehicles difficult to sell under the extremely competitive conditions which exist today, but I am pleased to advise that we have now liquidated almost entirely our stocks of these vehicles.

As some shareholders will already have seen from the Press, we have been appointed metropolitan dealers for the famous range of Austin cars and trucks.

Liberty Motors was not able to operate profitably during the last financial year, but the company has splendid premises, and your Directors are quite confident that satisfactory results will be obtainable this current financial year, as well as in future years.

Ansett Hotels Pty. Ltd.

Excluding Hayman Island and Hotel Manyung, that company conducts 17 hotels, and apart from catering for the needs of Pioneer, they also serve the travelling public with both accommodation and meals, as well as local residents with liquor requirements, etc.

Considerable progress has been made during the past twelve months in increasing the efficiency and profit earning of these establishments, and all the hotels in this group have operated profitably.

Your Directors are quite satisfied with this group of the company's chain of hotels, and are confident that the investment is sound and that satisfactory profits will be obtained.

I now pass on to Royal Hayman Hotel in the Great Barrier Reef, and Hotel Manyung at Mt. Eliza. These two hotels are in a different category to the chain already referred to. Because they represent a disproportionate amount of capital I propose to deal with them individually and in some detail.

I can now say quite confidently that Hayman Island is well established, and its facilities are being utilised by an ever-increasing number of people as each month goes by. During the months of April, May and June we had more than double the number of guests in the hotel as compared with the same period in 1952. During July, August and September the hotel was filled to absolute capacity, and literally hundreds of intending guests could not be accommodated.

For a very small capital outlay the total guest accommodation will shortly be increased to slightly over 200. Shareholders will appreciate that these additional guests make an enormous difference to the economics of the island. Apart from a few extra lodges, all other facilities such as lounges, dining room, bars, kitchens, laundry, etc., can adequately cope with the increased numbers.

Another problem which has concerned us is the falling off in trade during the latter half of October, the month of November, and the first two weeks in December. At this time it is easy to lose the profits made in July, August and September, and in an endeavour to overcome the problem this year, and with the idea of maintaining the full usage of our facilities, the flying boat company has combined with the island to make an attractive concessional rate for what we have termed our "off peak" period. This inducement has been most successful and will, we believe, enable us to operate this establishment profitably during the current financial year.

Now, turning to Hotel Manyung, Mt. Eliza. I am pleased to report that the results from this hotel have shown considerable improvement, although, like Hayman, it is still not showing a satisfactory result.

We find the hotel is very much in demand during the summer months and has no difficulty in making quite handsome profits in

(Continued on next page)

ANSETT TRANSPORT INDUSTRIES LTD. (Contd.)—

the house, restaurant and liquor trading. However, during the months of June, July, August and September, because of adverse weather conditions, the hotel slips into serious losses. This year we completely changed our operation during the winter months and closed our main dining room. Also, as the demand for accommodation was very limited, we practically closed the house. On the other hand, we introduced a beer garden, which is proving exceptionally popular among bona fide travellers on Sundays.

A number of other innovations is taking place—a smorgasbord buffet luncheon has been introduced on Saturdays in an endeavour to popularise the hotel among the Peninsula residents during the coming season, and to increase the already excellent facilities, tennis courts are being constructed.

With a view to greatly increasing the overall usage of the accommodation, substantial tariff reductions have been announced. It is now possible to holiday at Manyung with the use of a private bathroom at an all-inclusive tariff of £2/2/- per day.

Now, with buoyant Sunday trading, good restaurant business, increased occupancy resulting from our reduced tariff, and the other additional services, this hotel should really "go with a swing."

The two projects, Hayman Island and Hotel Manyung, represent a disproportionate amount of the total capital invested by A.T.I. in hotels, and although your Directors are quite sure that both projects will be profitable, it seems extremely unlikely they will make an adequate return on their capital investment. This is one of the problems confronting the Board which will only be solved as successful trading allows future consolidation of the overall position of A.T.I.

Australian Tourist Trade.

Before concluding this report, there are two matters of national importance upon which I would like to comment. One is the apparent disregard by the Federal Government of the great potential of the tourist industry to Australia.

In Canada, the United States, Britain, France, Switzerland, Italy and New Zealand, the importance of the industry is well recognised by the respective Governments, each of which has gone to great lengths to publicise their countries abroad and, in addition, have assisted by making financial facilities available to ensure an extension of the industry on a national basis within their own countries.

In Australia, we have each State Government with its own Tourist Bureau, the purpose of which appears to be that of attracting tourists from one State to another.

The time is long overdue for our Federal Government to realise the great potential addition to the national income which is now being lost to Australia, and to follow the leads of the Governments of the other countries to which I referred.

Taxation.

The other matter is one which I have previously mentione the heavy burden of company taxation which has now been duced from 9/- to 7/- in the pound. This, of course, is of g interest to shareholders in all public companies, but, in my opin it is still a terrific burden and a great deterrent to enterprise.

Australia owes a great debt to the large public compa which have undertaken so much of its development, and if Commonwealth is to progress, the Government must allow inv ment by the public in large companies to remain attractive. my opinion, public company tax should be further considerably duced. The Government would have very little to lose as dends are, of course, taxed in the hands of the shareholders.

In presenting this Annual Report to shareholders, I have deavoured to keep to facts without embarking on any undue opt ism, but, on the other hand, I do wish to convey a feeling of fidence in the company's future.

The company has made great progress since our last An General Meeting, and the problem facing your Directors toda one of increasing the profit earning of all our investments. T I assure you, is receiving our full attention, and we believe we achieving real success.

Future.

I realise that this is the third year that ordinary shareho have not received dividends, and one of the questions uppermos their minds must be—when will the company be in a positio return to the dividend list?

I cannot, of course, make a definite statement. I do beli however, that I have, to a considerable degree, answered the q tion by presenting to you a confident report on each of the c pany's main activities.

I can say that since I last stood before you, the process reducing costs, improving profits, and further analysing overhe has been going on day by day, and great progress has been m Also that to date in this current financial year, the indications quite encouraging, and if we continue on the present upw trend, we will be much happier when we meet again at this t next year.

Of course, it is not twelve months since our last An General Meeting. We have improved our procedures to an ex which has enabled this meeting to be held almost two mo earlier than last year's meeting. It certainly seems a very s time ago to me—not nearly sufficient time to have achieved all we had hoped to achieve.

At this stage I would like to comment on the splendid v carried out by the executive staff of the Holding Company and its subsidiaries, who have worked untiringly with me to find answers and really get A.T.I. back where it should be.

To the executive and our loyal staff I would like to co the sincere appreciation of the Board.

Beetle-Elliott Ltd.

Chemical Manufacturers.

Reg. Office: 35 Terry St., Rozelle, N.S.W. **Directors:** J. H. Todhunter (Chairman), H. M. Gibbons, P. K. Chance, T. D'A. Melhuish, F. C. Bennett, S. F. Rust, F. A. J. Reynolds. **Auditors:** A. G. Cameron; D. M. Ferguson.

9th Year ended April 30, 1953. Meeting September 17, 1953.

Sales remained on a low level until December, but later improved. Profit recovered by £4,689 to £15,551, and a final ordinary dividend of 3½% was paid, after omission of the year's interim and last year's final distribution.

	1953.	1952.	1951.	1950.

*Incl. replacement of fixed assets reserve (1953, £27,053); credited with profit on sale of fixed assets (1953, £4,957; 1952, £3,269; 1951, £8,456), and share premiums (1952, £32,492; 1951, £16,238).

At factories at Rozelle (N.S.W.) and Preston (Vic.), synthetic resins and powders for the plastic industry are produced.

The company also has an important interest in Australian Forest Products Pty. Ltd., which has been formed to undertake the manufacture of first-grade wood flour from sawmill waste in the Australian Capital Territory.

Two important developments during the year were increased demand for emulsions for plastic paints, and the manufacture from basic raw materials of melamine moulding compounds in Australia.

Stock levels were reduced considerably by disposal and usage.

The following address was given by the Chairman, Mr. J. A. R. Montgomery, to shareholders at the Annual Meeting held on October 13:—

The Directors Report and Statement of Accounts disclose a satisfactory trading result for the year ended June 30, 1953, although the volume of turnover was somewhat less than that of the preceding year. This position was brought about mainly by a temporary recession resulting from the contraction of Government and public utility projects.

It is pleasing to note that the general economic position now shows signs of a healthier stability, although Government projects and city building activity are still severely restricted. Some modification of existing landlord and tenancy enactments would go a long way towards causing the resumption of city building construction, which normally provides an additional outlet for your Company's products.

Range of Products.

For the first time since 1940 your Company was able to resume manufacture in volume of its agricultural fencing and barbed wire. It has also developed new outlets for its products in the pastoral, transport, fishing and materials handling industries.

As a result, the current year's activities have opened on a very satisfactory level which, it is believed, will be maintained, providing adequate supplies of Australian raw materials are available.

Profits and Taxation.

Due regard has no doubt been taken of the information on the dividend warrants that both the half-yearly ordinary dividend paid on February 28, 1953, and the final ordinary dividend paid on September 30, 1953, were declared from profits which are exempt from taxation in the hands of the shareholders.

You will note from the Directors' report that provision for Income tax was based on known rates at June 30, 1953. In view of the reduced rates announced in the Federal Budget, the amount provided will be considerably in excess of actual requirements.

Pay roll tax on wages paid to works operatives, previously charged to general administration expenses, has now been included in operating costs with the result that gross profits from trading and general administration expenses have both been reduced accordingly.

Portion of the amount previously provided for stock fluctuation has been credited to Profit and Loss Account and utilised to reduce unsold imported stocks to their equivalent Australian values and the remainder of the provision account has now been transferred to shareholders' funds in the Appropriation Account.

Employees.

In addition to the payment of cash bonuses to employees, the Staff Superannuation Funds have been increased by a further contribution of £7,628, making a total of £57,561, and once again a word of appreciation is due to all those in the employ of the Company who, by their continued efforts, have contributed in no small measure to the successful outcome of the year's operations. The Trustees of the superannuation funds have again exercised their rights to subscribe for a further 5,000 redeemable preference shares so that the employees of the Company, through their superannuation funds, now have a very substantial share holding.

Board of Directors.

Following upon the death of our late Chairman in September of last year, Mr. Robert Money was appointed to fill a vacancy on the Board of Directors. Mr. Money is the Manager of the Equity Trustees Company and is also Chairman of Directors of Rhodes Motors Pty. Ltd. and a Director of Southwell Investments Pty. Ltd. His wide experience should be of great benefit to our Company, and as he has previously acted as an alternate Director during the absence overseas of Mr. K. F. Cox and Mr. T. W. Higgins, he already has an intimate knowledge of the Company's affairs. Mr. Money comes up for election today in accordance with the provisions of the Articles of Association, and I have pleasure in introducing and commending him to you.

Brown-Gouge Ltd.

Dry Cleaners and Dyers.

Reg. Office: 73 Camberwell Rd., Upper Hawthorn, Vic. **'Phone:** WB 1241. **Directors:** L. A. Mellor (Chairman), J. D. Davies, J. F. Dibbin, C. T. Goode, R. L. Montgomery. **Auditors:** Spry, Clark, Tootell & Co.

17th Year ended June 30, 1953. Meeting October 14, 1953.

Profit fell sharply from £8,983 to £1,252; however, a profit of £8,753 on the sale of assets (mainly the Brighton factory sold to the Commonwealth Government) permitted the continuation of an 8¼% tax paid dividend amounting to £5,833 without reduction of reserves.

*Credited with profit on sale of assets (1953, £8,753; 1952, £740; 1951, £4,939); and since 1950, include share premiums, £22,489. Debited in 1952 with £4,728 balance of re-organisation expenses w/off.

Dry cleaning charges have not been increased since November, 1951, and the company has absorbed all subsequent rises in costs.

Following the sale of the Brighton factory, activities are now concentrated at Hawthorn with branch factories at North Melbourne, Reservoir, Balaclava and Geelong.

In addressing the Annual Meeting of stockholders on October 14, the Chairman, Mr. L. A. Mellor, said:—

Before dealing with the affairs of the Company during the year, I am pleased to inform stockholders that one of your Directors, Mr. J. D. Davies, is with us again, having returned to Australia in the early part of the year after an extended tour through the United States, Great Britain and the Continent.

It will be recalled that, during Mr. Davies' absence overseas, Mr. R. L. Montgomery acted as Alternate Director. I announce with pleasure that, early in the year, Mr. Montgomery accepted the invitation of the Directors to join the Board. Mr. Montgomery retires under Article 75 and offers himself for election.

I am very pleased to have at this meeting Mr. E. E. Curtis who was appointed General Manager of the Company a few months ago, and Mr. H. G. Wadge who was recently appointed Secretary.

On behalf of the Members of the Board, I wish both these gentlemen a happy and long association with the Company.

Activities

The Company's activities during the year now under review have been affected by the general economic situation. Once again we have been confronted with rising wages, costs and prices, the all too familiar pattern of our industrial and commercial life of the past few years. As the last increase in dry cleaning prices was in November, 1951, all subsequent increases in costs have had to be absorbed.

The recently announced reduction in Company Tax provides a welcome relief which will assist in easing the present heavy burden of taxation. Similarly the decision of the Arbitration Court to abandon the automatic quarterly cost-of-living adjustments to the basic wage brings a belated sense of proportion to our economic system.

Towards the end of the year we have been enabled to put into effect a well-considered programme for the further re-organisation and consolidation of the Company's several activities. This programme is designed to provide the public with the best dry cleaning service with maximum operating economy and efficiency.

Factories

The disposal of the Gouge factory at Brighton at a satisfactory figure and the realisation on the sale of surplus plant and equipment has allowed us to concentrate our activities at the Hawthorn factory. The full economic advantages are now becoming apparent in the current year.

To assist in maintaining a speedy delivery service, with due regard to quality, two additional factories have been opened in the greater Melbourne area. The first at Reservoir, the second at North Melbourne. The purchase and opening of the North Melbourne factory has enabled us to close down the factory operated at the Carlton premises of The Myer Emporium Limited. The new factories are operating at an economic level and figures available for the current financial year show an encouraging return. The trading arrangements with the Myer organisation remain on the same amicable basis which has existed over the past years.

We have commenced the building of a new factory at Geelong as the present factory in Little Malop Street is inadequate for the increasing demand for your Company's service. The new factory when completed at the end of November, 1953, will provide this rapidly growing city with a dry-cleaning service both efficient and economic.

It will be recalled that we experienced a disastrous fire last March at the Gouge Crystal Laundries Pty. Ltd., Balaclava. The resulting damage was adequately covered by insurance which is in the process of being satisfactorily finalised with the insurance company. That portion of our claim relating to loss of profit has not been included in the accounts for the year now under review. I would like to take this opportunity of complimenting the Manager, Mr. T. A. C. Weidemann, and his staff upon their successful efforts in carrying on through a most difficult period.

During the year we introduced the "Puratex" cleaning process to the great satisfaction of our customers. "Puratex" is the registered trade mark of your Company.

Accounts

I now propose to comment briefly upon the salient features of the consolidated accounts of the Brown-Gouge Organisation.

Turnover has been affected by the general economic condition during the year and shows a reduction. Figures for the first three months of the current year show an encouraging increase over the corresponding period for last year.

Net Profit for the year from trading after providing for depreciation, further depreciation on fixed assets sold, amortisation income tax and other charges was £974.

Profit on Realisation of Fixed Assets, £8,753:
This item represents a capital profit realised on the sale of buildings, surplus plant and fittings and, in accordance with standard practice, has been transferred to reserve.

Debtors: The increase in the sundry debtors is due to the balance owing to the Company at June 30 in respect of the sale of the Gouge Brighton factory, full payment for which was received in July last.

Stockholders' Funds amount to £189,427 as compared with £185,154 at June 30, 1952.

New Chairman

This concludes my remarks with the exception of a personal matter to which I now refer. After having been Chairman of your Company for the past thirteen years, I intend relinquishing that position, I am very happy to retain my seat upon the Board.

On several occasions I have raised with my colleagues the matter of my retiring from the position of Chairman but without avail. More recently, however, I informed the Directors that I had definitely decided to retire from this Office.

I have taken this step in the full belief that, following upon a long and difficult period, the affairs of the Company are now improving and that present conditions indicate there are better times ahead. This fact appears to be borne out by the improved results for the period covering the first three months of the current year which shows a satisfactory profit, being a great improvement over the corresponding period of the previous year.

I herein record my very sincere and cordial thanks to my colleagues for their willing and untiring assistance at all times. No Chairman could wish for more consistent support than that which has been afforded me.

Mr. C. T. Goode who has been a Director since the inception of the Company and is eminently fitted for the position, will fill my place as Chairman. I wish him every happiness and success in his added responsibilities.

Dividend

Your Directors recommend payment of a dividend of 5d. per stock unit payable out of tax paid reserve, representing a return of 8⅓% upon paid capital or 3.2% on stockholders' funds. This tax paid fund was acquired as a result of the amalgamation with Gouge Proprietary Limited and its subsidiaries, and your Directors feel that stockholders should again be given the opportunity to take advantage of the relief from taxation afforded by a distribution from this source.

In order to maintain Reserves intact an amount equal to the dividend has been allocated to Reserves out of the Profit and Loss Appropriation Account.

I have much pleasure in extending the thanks of the Directors to members of the Executive and Staff for all their assistance during the past year.

Albion Quarries Limited

Reg. Office: Cnr. Arden and Laurens Sts., North Melb. **'Phone:** FJ 1165. **Directors:** Sir Alexander George Wales (Chairman), E. H. Clark, T. A. Rank, E. T. Smith, L. J. Callaway. **Auditor:** E. K. Wilson.

4th Year ended June 30, 1953. Meeting October 14, 1953.

Although trading profit was lower at £179,941, profit after tax (down £21,734) was £8,240 higher at £72,998 returning 26% on capital. Dividend was raised from 10% to 12½%.

Leaving a balance to be carried forward of		£124,379

During the financial year under consideration the results of the distillation and asphalting branches of the company did not reach the profit shown in the previous year, due to keener competition in this field of the company's activities. In addition, the reduction in funds available to Government and Local Government bodies lessened the demand for the company's products for road surfacing. To some extent, the results of this section of the business were also affected by adverse weather conditions experienced in the early part of the financial year.

However, the new crushing plant at Albion came into operation in the latter portion of the financial year, and, whilst competition was keener, the increased output of crushed stone compensated to a large extent for the increased costs.

As in the previous year, depreciation on new plant purchased was charged in the accounts in excess of the rates allowed by the Taxation Department.

Apart from the foregoing, the Directors are of the opinion that the results of the year were not materially affected by any item of abnormal character.

The Directors are pleased to report that, since the closing of accounts, the demand for the company's products has been maintained.

Your Board desires to express appreciation for the splendid work and co-operation of the Staff and Employees, which has contributed materially to the successful year's trading.

Bruck Mills (Australia) Limited

Manufacturers of Rayon and other Synthetic Fibre Materials.

Reg. Office: 352 Collins St., Melb. **'Phone:** MU 7438. **Directors:** R. J. Vicars, C.B.E. (Chairman), A. M. Flanders (Joint Manag. Director), E. F. Pope (Joint Manag. Director), G. L. Bruck, A. J. Hancock, R. J. McArthur, C.B.E., N. Myer, Sir Norman Nock, Kt. (Alternate). **Auditor:** A. H. Etherington.

7th Year ended June 30, 1953. Meeting October 12, 1953.

Profit was 68.6% higher at £187,303, returning 16.1% on increased ordinary capital. Ordinary dividend was raised from 7½% to 11¼%.

Output of the Wangaratta mill was higher than in the previous year, as a result of plant extensions and three-shift operation.

In conjunction with John Vicars & Co. Ltd. the company will produce spun rayon yarn from staple fibres. Plant for this factory is on order, and land and modern buildings have been acquired at Bulli, N.S.W.

The following address was given by the Chairman, Mr. R. J. Vicars, to shareholders at the Annual Meeting held on October 12:—

It is with sincere regret that I have to advise of the death of Mr. W. J. Salthouse. Mr. Salthouse, a partner in the firm of Hancock and Woodward, had been Secretary of your Company since its formation. He personally gave very great assistance to the Company in many ways and will be sadly missed.

I am delighted to welcome here today, Mr. Robert Bruck, Vice-President of Bruck Mills Limited of Canada. We have previously had the pleasure and advantages of visits made by his brother, Mr. G. L. Bruck, and I would assure you of the great benefits which have accrued to us accordingly. I know that Mr. Robert Bruck's visit likewise will be most valuable to us and is again evidence of the continued great interest of the Canadian Company. This is most gratifying and I trust that the very close relationship will always be maintained.

It is pleasing to be able to again report continued expansion in all of the operations of your Company. The conservative financial policy, coupled with the progressive manufacturing and trading policy which have been a feature of this Company, are now showing results which must be most gratifying to all concerned.

Profit Results.

The net profit earned for the year under review amounted to £187,303. This is an increase of £76,241 on the profit earned in the previous year.

Before this profit was determined, provision was made for taxation, depreciation, amortisation of leasehold improvements and, of course, all working expenses.

Your Directors were pleased to have been able, during the year, to pay for the first time, an interim dividend on the ordinary shares of the Company. They now recommend that a final dividend on the ordinary shares of 6¼% be paid, making 11¼% for the full year. This will absorb £64,624 which, when added to the interim dividend and to the dividends paid on the preference capital, namely, £12,500, will bring the total dividend distribution to £124,681. The sum of £62,622 has been retained from the year's profits to strengthen the reserves of the Company.

Balance Sheet.

The balance sheet as at June 30, 1953, discloses that shareholders' funds now total £1,544,944, an increase of £277,413 over last year. This has been achieved by the calling up of ordinary capital to the extent of £194,291, the issue of shares to Bruck Mills Limited of Canada, for payment in respect of machinery £20,500 and by retention of profits £62,622.

Outside liabilities have decreased by £74,009 to £779,126 whilst fixed assets have increased by £44,471 to £741,827 and current assets by £158,933 to £1,466,288. I am happy to be able to assure shareholders that your Directors consider that both stocks on hand and trade debtors are soundly valued.

The progress and profits of the Company are indeed pleasing and have been achieved by great effort on the part of all. As last year, I again express the highest praise of the Board for the work of your Joint Managing Directors.

Mill Operations.

Production continued to increase. Additions made to plant du ing the year, coupled with three shift working and high technic efficiency resulted in a substantial increase in output over that the previous year.

Great tribute must be paid to the staff at our factory for th high productivity attained. This, of course, would not have bee possible but for the ability of our sales organisation to style ahe goods which will be wanted in the future and to secure the orde necessary to maintain full production. We feel that Bruck fabri are the leaders in the trade today and that this position will b maintained with benefit, not only to our Company, but also to ou customers.

We have maintained our policy of close personal contact wi overseas developments. Fashions, sources of raw materials an technical progress are all seen at first hand and this year, Mr. A. M Flanders has spent some months in the United Kingdom, Nort America and the Continent.

As in previous years, members of our technical staff have spe time in the factories of Bruck Mills Limited of Canada to acquai themselves thoroughly with new processes and methods.

We have again received close co-operation from the local author ties of Wangaratta. It is pleasing to report that we now emplo just over 1,000 people with a weekly wage bill of approximate £15,000. Since 1946, the year in which we started, the population Wangaratta has grown from 6,670 to a figure today of 10,200: we fe that we have been an integral part in a real achievement in decen tralisation in the State of Victoria.

Staple Fibre Spinning.

Your Company uses as one of its main raw materials, lar quantities of yarn spun from staple fibres. These have mainly bee obtained from the United Kingdom and the Continent and latterl increasing supplies have been available from Australian spinner It has been felt by your Company that such yarns will, in futur be produced to a greater extent in this country and that the Com pany should, if possible, be in a position to benefit from such expan sion.

John Vicars & Co. Limited of Sydney, had recently investigate this form of spinning and after very careful consideration, ha ordered a small initial plant from Switzerland. This plant had bee secured on very advantageous terms as regards delivery. Great ca had been taken to ensure that the plant ordered was the mo modern available and furthermore, capable of utilising availab fibres to the best advantage whereas a big proportion of the pla currently operating in other countries was of old type and restricte in one or another aspect.

Discussions took place between your Company and John Vica and Co. Limited and after careful consideration and consultation wit Canada (who have in recent times installed similar plant) it wa agreed that the two Companies should jointly enter the field on th basis of each holding 50% interest in a new Company to operate th plant. This new Company will take over the plant currently o order for John Vicars & Co. Limited, it will also acquire moder

uildings and approximately 11 acres of land at Bulli, New South Wales (currently owned by John Vicars & Co. Limited) in which the lant will be installed. The building is most suitable and allows for xpansion when required.

The plant is to be taken over at actual cost and the land and uildings at valuation. It is thought that the new Company should, fter the initial period, earn reasonable profits but, in particular, : is considered to have a most valuable potential for the future. 'he finance required from your Company for this venture will be rovided from existing resources.

Outlook.

The current year has started satisfactorily. Sales and production are reaching new records and immediate conditions as regards our Company's trading are good. One must not, however, overlook certain factors which quickly could cause a marked change. 'he closest of these to our own operations would be the further removal of import restrictions, which would permit a flood of low riced goods from abroad, or a policy of admitting overseas goods ree of duty under By-law.

No matter what we can achieve by care and efficiency, we in Australia at present are unable to reduce costs of manufacture to the level of most overseas countries. The high costs with which the Australian manufacturer is saddled are not of his own making but are forced on him by influences quite outside his control.

Unsettled conditions exist in the World prices for commodities, which prices are trending downwards. Surpluses have appeared where recently shortages existed and commodities in short supply are comparatively few. A major reduction in Australia's export income would have a rapid and adverse repercussion on secondary industry.

You may be sure of the confidence of your Board that the Company is well equipped to face adverse changes in economic conditions should they occur.

Appreciation.

I have not hesitated in the past, or throughout this speech, to pay tribute to the work of our executives and staff. Their business ability, and may I say stability, in the face of continued pressure required in a growing company, has been outstanding. I am confident that they believe, as we do, in the future of our Company.

Brooks Robinson Limited

Increased turnover in manufacturing activities was more than offset by reduction in the merchandising division, where the effect of import restrictions and reduced building construction was experienced. Through a well-situated city retail store commodities including window glass, wallpapers, paints, oils, sanitary ware and electrical goods are handled. A shopfitting factory supplies metal and glass fittings and joinery.

Net tangible asset backing (book values in consolidated balance-sheet)—Pref., £48/16/2; ord., £1/8/7.

In his address to shareholders at the Annual Meeting held on October 22, the Chairman, Mr. H. Tatnall, said:

While the turnover and gross profits did not reach last year's record figures, the reduction in income tax enabled us to show a slightly better net profit.

Our General Reserve has been increased by £25,000 to £75,000 and Provision for Contingencies has been established by the transfer of £15,000 from Profit and Loss Appropriation Account. This provision is to meet a Contingency that appears certain to arise from the legislation now before Parliament for long service leave for employees.

Liquid Position

I would also refer to the improvement in the liquid position of the Company's finances. Twelve months ago our liabilities (including our Bank Account) and also our Stocks were a great deal higher than normal but this position has been rectified and the Balance Sheet shows a very sound financial position. Unfortunately, in the process our Stocks in some cases have been reduced to a level that is making our trading very difficult. This is the result of the continuance of Government import restrictions on many lines we import, such as plate glass, wallpapers, tiles and sanitary ware. As there are no locally manufactured substitutes for some of these our turnover was consequently affected.

The Government has granted us some relief but this is quite inadequate for our requirements. It is hoped that the Government will, before long, entirely lift the restrictions from the type of goods that we import and I should like to emphasize that these are not in the luxury class but are vital to the building and allied industries and for the maintenance of employment. The uncontrolled importation of such goods would not affect any Australian manufacturer's position.

Our Manufacturing Department has been extremely busy and with labour somewhat more plentiful, our output was satisfactory. This activity has continued since June 30 and we are fully booked till the end of the year and are unfortunately now having to decline orders where urgent delivery is required.

Paint and Refrigeration factories are in full production and we find competition from the manufacturers for the distributing trade very keen. Our Merchandising Sections have also been affected by the reduction in the housing programme. Statistics have, however, shown a definite increase in new building construction over recent months.

Overseas Trends

During the year the Manager of our Shopfitting Department visited England, America and the Continent to study the trend of modern architectural developments, particularly in store fronts and fittings, in the manufacture of which our factory is principally engaged. This trip was very successful, both from the knowledge he acquired and from the arrangements he was able to make with overseas manufacturers for the manufacture here of a number of lines that will integrate with our present activities and which promise to provide substantial expansion in our business.

The Directors would like to express their thanks to our Staff for their continued co-operation in all sections—their work is greatly appreciated.

The following report by the Chairman, Mr. R. R. Thomas, was circulated to shareholders with the Annual Accounts:—

The Balance Sheet and Profit and Loss Statement for the year ended June 30, 1953, are presented herewith. As the Company is a Holding Company, which derives the whole of its income from its subsidiary operating companies, there are also presented herewith a Consolidated Balance Sheet and Consolidated Profit and Loss Statements. Comparative figures for the previous year are presented in all statements.

The consolidated net profit of the Bearing Service organisation for the year amounted to £199,215, after providing £105,800 for taxation. This profit represents 21.7 per cent. on the paid-up capital, or 15 per cent. on total shareholders' funds.

Net profit before taxation (£305,015) is almost £107,000 lower than the corresponding figure last year. The reduction in Company income tax rates has done much to offset this reduction, and the final net profit of £199,215 is actually £30,666 lower than last year's record profit of £229,881.

The Balance Sheet

It will be seen from the Consolidated Balance Sheet that the Company's liquid position has shown considerable improvement. Total bank overdrafts have been reduced by more than half, and in all, current liabilities have been reduced by £206,000. Stocks on hand are slightly lower—at £825,000—and at this figure are adequate at least for the immediate future.

During the year negotiations were completed for the purchase of the whole of the outside interest in the capital of our Adelaide subsidiary. Previously, our interest in this subsidiary amounted to 52 per cent. of the capital, the remaining 48 per cent. of the shares being held by other persons. With the purchase of this outside interest, the Adelaide subsidiary is now wholly owned by the Bearing Service group. Apart from a small payment in cash the consideration for the purchase of this interest was the issue at par, of 56,010 ordinary shares of 10/- each. This issue raised the total paid-up capital of Bearing Service (Holdings) Limited to £919,657, in 1,839,314 shares of 10/- each.

The Year's Operations

The year just closed has, in many ways, been a difficult one. The general recession in industry last year, and the limitation of the development programmes of Government departments and public utilities had its effect on our trading, and sales generally were lower than those of the previous year.

There has been continued improvement in the supply of ball and roller bearings from overseas factories, and we are now able to obtain practically all sizes at reasonably short notice.

Your Directors consider that, under the circumstances, the results of the year's operations were satisfactory. In their opinion those results were not affected by items of an abnormal character.

Dividends and Reserves

It is the recommendation of the Directors that an unchanged dividend of 9 per cent. be paid this year. This dividend will absorb £82,769 of the consolidated net profit of £199,215. The remainder of the Company's tax-paid funds were utilised in the payment of last year's dividend, and therefore the dividend now proposed, and also future dividends, will be taxable in shareholders' hands in the normal manner.

Your Directors have also resolved to transfer £100,000 of the year's profits to General Reserve, which is thereby increased to £300,000. After making this transfer, and providing for the above dividend, there is a carry-forward in the Consolidated Profit and Loss Appropriation Account of £115,682 as against £99,236 brought in at the beginning of the year.

General

During the year, our Brisbane Company completed the erection of, and is now occupying, a modern warehouse and offices in Ann Street, Brisbane. Building operations are now in progress in Sydney, and certain improvements and alterations are also being undertaken in Adelaide. It is hoped that the completion of these plans will enable the Company to continue to improve its service facilities in both the industrial and automotive fields.

Cameron & Sutherland Ltd.

Machinery Manufacturers and Merchants.

Reg. Office: Riverside Ave., Sth. Melb. **'Phone:** MX 2251. **Directors:** N. Cameron (Chariman and Manag. Director), J. A. G. Robertson (Deputy Chairman and Joint Manag. Director), W. S. Cameron, A. F. Crosby, A. S. Murray. **Auditors:** Spry, Clark, Tootell & Co.

Year ended June 30, 1953. Meeting October 19, 1953.

Reduced activity in public works and industry, especially in emergency power plant, led to a reduction in turnover and a loss of £13,610 was sustained. The loss by Riverside Manufacturers Pty. Ltd. was £20,400, but this was off-set by profits in other sections. No ordinary dividend was paid, and reserves fell by £14,196.

The parent company is a merchandising house, handling products of its own subsidiaries, as well as those of overseas principals. Manufacturing covers a wide range of engineering equipment, pumps, generating sets, machine tools, concrete mixers, winches, light railway materials, industrial and meat wrapping stockinette, and cleaning materials, also a special vee-belt pulley.

Branches in Hobart and Sydney are making progress, but are still in the initial stages.

The following is an extract from the Directors' Report circulated to shareholders with the Annual Accounts:—

At last year's Annual Meeting, the Chairman indicated that the record results of previous years may not be maintained in the year now under review, and although a reduced turnover was anticipated it was impossible to foresee the impact Government import restrictions would have, both directly and indirectly, on the Company's trading, particularly during the first six months of the year.

Although it was necessary, in the interests of the Australian economy generally, for the Federal Government to place some control on imports into this country, the delays occasioned by the necessity to establish claims to quotas, and to obtain licences on a restricted basis for the importation of goods against firm local orders, placed the Company in a most difficult position.

Increased credit control which had its reaction in other sections of industry in the preceding year also contributed to the reduced turnover for the period. Government departments and public utilities which normally furnish a substantial part of the Company's trading were forced to abandon or postpone projects because of financial restrictions imposed by both Federal and State authorities.

Large sales were made in the previous year of auxiliary power plants which were purchased by customers to augment normal supplies of electricity. With the improvement in supplies of electricity in this State, which have been brought about largely by reduced consumption throughout Industry, sales of these units, as expected, fell away to a marked extent, but we were prepared for this eventuality and are pleased to state that the Company was successful in clearing its entire stocks of these units.

Interstate Branches

The Tasmanian branch has continued to expand and the turnover for the year disclosed a further improvement over that of the previous year. The Company originally established its branch premises in Launceston, but during the year it was found necessary to open a sub-branch in Hobart, and indications are that this venture in the current year will prove a sound investment to the Company.

When opening a branch in Sydney, it was considered by t Directors that it would take some time before it would becon established against keen local competition. This is proving t case, but with the Company's new lines of manufacture now comi on to the market, and the pursuance of an energetic sales campaig this current year's results should show continued improvement.

Riverside Manufactures Pty. Ltd.—This solely owned subsidiar whose activities include the manufacture of pumps, winches, ste fabrication and general engineering lines, incurred a loss of £20,40 This was due to a marked reduction in sales volume mainly b cause country and interstate traders who contribute largely to t turnover of this Company were heavily stocked and their energi throughout the year were directed more to the reduction of su stocks than to replacements on the same high levels.

With the advent of new design products certain residue stoc became obsolete, and although of some saleable value, it was co sidered necessary to write down these stocks.

During the year the structural steel section of the works w developed and expanded and toward the close of the financial ye substantial contracts were completed with profitable results.

At the present date this Company holds sufficient unexecut orders to maintain it in full production for nine months of t current year and providing no further increase in labour cos occur, profitable results should be obtained in the future.

C. & S. Industrial Textiles Pty. Ltd.—It is pleasing to no that this subsidiary has operated efficiently and profitably sin its formation and although the profits earned for the financial ye under review were less than those of the years 1950/51/52, t results achieved are considered satisfactory.

Until recently, this Company was dependent upon outside sourc for its supplies but during the year a new factory was erected a production has now reached a standard which makes it complete independent.

Further factory extensions are already commenced, and add tional plant ordered to enable this subsidiary to complete su stantial unexecuted contracts already in hand.

Zypit Pulleys Pty. Ltd.—A patent "Vee" belt pulley is produc by this subsidiary and although turnover was affected by pr vailing economic conditions during the year, the results achiev

re considered satisfactory and this line still retains its popular emand.

Stocks

Your Directors feel confident that the improvement in the Company's sales which has occurred since the close of the last nancial year, augurs favourably for the future, with the result hat stocks, which are already considerably lower than last year's, ill be further reduced.

Dividend

Your Directors regret that, in view of the consolidated loss disclosed and, in order to conserve funds for the Company's activities, no dividend on the ordinary share capital of the Company is recommended for the financial year ended June 30, 1953.

Subject to the foregoing, in the opinion of the Directors, no items of an abnormal character materially affected the year's operations.

Bebarfalds Limited

eg. Office: 536 George St., Sydney, N.S.W. **Directors:** M. Shmith (Chairman), J. V. Ratcliffe (Deputy Chairman), L. Newton, L. J. Newton. **Auditors:** L. B. Wallace & Son.

31st Year ended June 30, 1953. Meeting October 22, 1953.

Although turnover was slightly lower, reduced operating exenses combined with a lower taxation liability yielded a profit 37,677 higher at £157,176. After meeting preference dividends, eturn on ordinary capital was 18.6%, permitting dividend to e increased by 1% to 9%.

*Adjusted figures from memorandum of sale of November, 1950.

The business has now completed over 100 years' trading as Sydney furniture store. More than two-thirds of issued capial is represented by freehold property.

In common with other retailers, the company experienced reater liquidity, stocks falling by £175,836, and bank balance nproved by £69,823. Debtors rose by £109,755.

Following the current trend to suburban retailing, the comany has purchased land at Parramatta for the erection of a hree-storey building.

Turnover for the three months since balance date is higher han the corresponding quarter of 1952.

In addressing the Annual Meeting of shareholders on October 2, the Chairman, Mr. M. Shmith, said:—

The Directors' Report and Accounts for the year ended June 30, 953, has already been circulated to shareholders and records a et profit for the year of £157,176 after providing £90,000 for taxaon based on the reduced rates of company taxation recently anounced by the Federal Treasurer.

This result reflects not only a lowering of £14,000 in taxation rovision as compared with the previous year, but also an increase f £23,677 in net profit before taxation, combining to give an inrease of net profit after taxation of £37,677.

The improvement in the net profit is attributable mainly to conomies effected in operating expenses and was achieved on a lightly lower turnover.

Depreciation on plant and equipment was provided at £6,237, igher by £1,391 than the charge for 1952.

It will be noted also that the mortgage on the city property has een reduced by the sum of £8,000 to £152,000.

During the year dividends amounting to 8% on preference hares were paid and an interim dividend of 4% was paid on rdinary shares.

The Directors' recommendation is for the payment of a final ividend of 5%, making 9% for the year on ordinary shares and n appropriation of the sum of £35,000 to General Reserve, leaving n amount of £65,605 to be carried forward in the Profit and Loss ppropriation Account. In conformity with modern practice, the mount of the proposed dividend has been grouped in the Balance heet with Creditors rather than left to form part of shareholders' unds at June 30 as in previous years.

If effect is given to the Board's recommendations the total hareholders' funds will have increased from the 1952 level of 1,163,429 (after deduction of a final dividend of 4½%) to £1,240,605, n increase of £77,176. Of this amount reserves constitute £340,605.

Reduced Stocks

In common with most retail businesses, stock in trade has been aterially reduced again this year, the downward movement is ainly due to the greater availability of supplies.

The increase in Hire Purchase Debtors is an important trend in ur business. This form of consumer credit is of real service o the salary and wage earners as it enables them to acquire ousehold goods by regular payments from income.

Suburban Development

Another feature of retailing in Sydney has been the continued growth of suburban shopping. The Company's decision to set up a Branch in Parramatta indicates an awareness of the trading potential of the outer suburbs rather than any lack of confidence in the future of the City.

An excellent site has been secured in Church Street, Parramatta, at a cost of £61,375 on which a modern three-storeyed emporium is in the course of erection where it is intended to stock all the home furnishing requirements as sold at our city store. This location will enable us to provide parking facilities at the rear of the new premises.

During the year your Directors decided to increase the showroom area in the City store by removing the workrooms on the 8th floor to our Chippendale premises.

We now utilise the whole of the 8th floor as a General Office. This modification will permit of the office space previously occupied on the 3rd floor being converted to a showroom.

In carrying out the alterations we have adopted the latest American and Continental practice of incorporating a number of contrasting colours throughout the ceilings and walls. The effect is most pleasing and provides the staff with improved working conditions. We invite our shareholders to take the opportunity of viewing the new offices as later we intend to have a similar colour scheme in one of our showrooms.

The Directors would like to pay special tribute to the furniture manufacturers who during the year have responded well to our desire for new designs in home furniture.

Future

The outlook for 1954 by contrast with this time last year is reassuring and it is pleasing to report that the first three months of this financial year show an increase in turnover as compared with the corresponding quarter for 1953.

Staff

The Staff Provident Fund has been allotted a further sum of £3,353 by the Company bringing the value of its assets since its establishment in 1946 to a total of £53,907.

I would like to place on record the appreciation of the Directors to the management and staff personnel for their loyalty and cooperation during the past year.

Consolidated Metal Products Limited

Reg. Office: 2-6 Allen St., Waterloo, N.S.W. **Directors:** J. H. Broinowski (Chairman and Manag. Director), A. R. Allen, C. J. Doring, F. F. Munro. **Auditors:** Norton & Faviell.

3rd Year ended June 30, 1953. Meeting October 28, 1953.

Disclosed profit of £58,622 (16.7% on capital) after taxation at 1952 rates, is similar to last year. A further £8,000 will result from the reduced rate of taxation. Dividend is 1% higher at 9%.

The group was formed in 1950 to consolidate the operations of certain companies engaged in battery plate manufacture and distribution, and the related industry of recovery of lead and antimonial lead from scrap and manufacture of lead oxides. Other fields of activity include manufacture of electric and kerosene hot water storage systems and general sheet metal engineering.

Subsidiaries are—

Battery Equipment Supply Co. Pty. Ltd. (Sydney)—Storage battery plates for distribution in N.S.W.

Phoenix Chemical Co. Pty. Ltd. (Sydney)—Lead oxides for sale in N.S.W. and overseas.

Battery Equipment Supply Co. (Vic.) Pty. Ltd. (Melbourne)—Storage battery plates for all States other than N.S.W. and for export overseas.

Lead Products Pty. Ltd. (Melbourne)—Lead oxide for sale in Victoria and overseas.

Lead Refineries Pty. Ltd. (Melbourne)—Smelts, refines and alloys lead for the battery industry in Victoria.

C. Doring Pty. Ltd. (Sydney)—Smelts, refines and alloys lead for the battery industry in N.S.W.

Swiftsure Pty. Ltd. (Sydney)—Produce electric and kerosene hot water storage systems and undertakes various sheet metal engineering.

The Chairman, Mr. J. H. Broinowski, delivered the following address at the Annual Meeting on October 28:

The printed financial accounts, in your hands, have been set out to provide information in readable form, but nevertheless I propose to make a few remarks referring primarily to figures of the Combined Group.

Dealing first with the Balance Sheet, it may be of interest to know that there were 350 shareholders registered after closure of the books, compared with 314 a year ago. The Trustees of the Staff Provident Fund represented a further 48 additional to those employees who are direct shareholders in their own names.

Following down the Balance Sheet items in the order printed:

Our properties have been maintained in good order and the near £100,000 in the Balance Sheet represents 75,000 square feet of built space and approximately a further 204,000 square feet of ground for building extensions, some of which may be proceeded with in the very near future.

We spent a net £10,546 on new plant during the year, which, together with new plant installed in 1951/52, assisted materially to increase production, reduce some costs as a counter to heavy raw material price increases, and improve quality. It would cost very much more than the written-down value to replace our plant and equipment.

Improvements in staff amenities have made working conditions more congenial in the factories and are appreciated by our men. We hope to do more in this direction as space and opportunity permit.

Shares in wholly-owned subsidiaries increased by the application of a share premium reserve in one of the companies, to an issue of 2,250 £1 shares at par to the parent.

A small capital profit resulting from the voluntary liquidation of a company in which we owned shares was applied to reducing book value of our New Zealand investment to £1,490, on which we receive currently a return of about ten per cent. per year.

Our cash position has further improved since the Balance Sheet date, largely as a result of stock reductions.

Many of our customers work on seven-day discount accounts; hence the small outstanding debts totalling £69,785 at June 30.

Although the price of lead per ton was much higher, our stocks were reduced in value by nearly £40,000 compared with 1951/52, which was a very substantial reduction in tonnage. We have to carry stocks of lead disproportionate to our normal production requirements because of vague and unreliable shipping from Port Pirie to Melbourne and Sydney, but we have managed to make further reductions since Balance Sheet date.

As to our current liabilities, these had been reduced by roughly £61,000 in twelve months, made possible broadly by stock reductions already referred to and the necessary retention in the business of a substantial proportion of profits. This conservation of funds has strengthened the net tangible asset backing of our 10/- shares which is shown in the accounts at 8/5 per share on the basis of written-down book values as at June 30, 1953—an improvement of more than nine pence per share in the year. The building-up of reserves in the subsidiaries and the writing-down of intangibles has been the method employed in the accounts to reflect the strengthening of our resources. It follows that a corresponding reduction of intangible assets appears at the bottom of the Balance Sheet. Since our formation, £50,291 worth of reserves have been created; £25,224 has been written-off goodwill and £15,882 written-off other intangibles. All these additional funds (over £90,000) are fully employed in our businesses and have been conserved in years of unprecedented taxation burdens.

Profit and Loss Account

Turning to the Profit and Loss Account, and again referring to the combined figures of the group for 1952/53, it will be seen that we had £14,000 brought forward and that our profit (before tax) at £103,251 was more than £24,000 better than for the previous year.

We provided £44,629 for taxation at 1952 rates. The new budget will reduce this by about £8,000; otherwise the higher tax provision compared with the previous year is due entirely to the higher taxable profit, remembering that 1951/52 had the benefit of a £10,000 non-taxable profit.

Of the £72,622 available, we wrote £12,731 off goodwill in a subsidiary and transferred £28,391 to General Reserves, leaving for distribution the exact amount required to cover the interim dividend paid last April and the final dividend now recommended which will be paid tomorrow if approved by those present today.

Sales figures could be misleading in our particular case, because of the diverse activities of our businesses. Having prefaced

ne statement with a warning, I may mention only for your interest hat our sales last year (including sales and services at normal rofit rates within our group, but not counting rents, dividends, nterest, and similar revenue) were well over £1,000,000, whilst for ne three months ended September, 1953, they were at a very much ncreased rate per annum.

Manufacturing Costs

Many leaders in Australia have expressed themselves as deeply oncerned over the high costs of manufacturing here; particularly this said in reference to labour costs. Our men are highly paid, ut because of experienced skill and interest for the job, output nd quality have been maintained at levels that have enabled us o sell extensively overseas again world competition. We have, as ou know, worked on piece-work and incentives for many years, nd we keep Management in close personal touch and harmony with ur men, the majority of whom have been with us a long time. 'onsequently our labour cost per unit of production has been kept i sound proportion.

Of far greater concern to us than our own direct cost of pro-uction is our share of the cost of waste in Government Departments. 'ublic utilities now sell their services at very high prices indeed, ut nevertheless incur deficits that are annually made good out f taxation on profits of successful businesses. To the extent that irect charges are made for services we may deduct them from rofits before determining our tax liability, but whilst those charges re insufficient to cover costs of Departments and the difference being made up out of consolidated revenue, it follows that a large roportion of income tax is being paid for those services without the benefit of deduction of the cost from our taxable income. These deficits, together with Governmental administrative costs and free social services, produce tax rates that we all agree are too high. That being so, a company such as ours must provide nearly half its net earnings for tax, and out of what is left, replace worn-out plant costing more than twice the replacement reserves allowed for tax purposes; provide the extra money to replace stock used, with higher-costing materials; conserve the funds needed constantly to increase efficiency with better plant and research as well as for extensions and expansion essential for a business to keep up to date and competitive; and, in spite of all that, see that shareholders have a reasonable return on their invested savings.

A form of capital inflation seeking more and more money from shareholders is an alternative expedient for financing these requirements, but such a policy ultimately leaves Management with an impossible burden to fulfil its obligations to customers, employees, and shareholders.

Price control is not the answer either, as applied to our industry at any rate. Our raw materials have been de-controlled for a long time, fluctuating considerably each day, yet prices for battery plates are still fixed without any regard for these fluctuations. Keen competition in our industry has proved adequate safeguard against exploitation of our customers even if we had ever been foolish enough to regard high prices as good business.

The best solution would be a drastic curtailing of the activities and the expenses of Governments in matters well able to be handled by individuals having sufficient freedom to apply their abilities and profits or savings where they believe they see opportunities for improving their own lives.

Cottmans Limited

Motor Cycle Distributors.

eg. Office: 291 Elizabeth St., Melb. **'Phone:** MU 9841. **Directors:** W. T. Cottman (Chairman and Manag. Director), Herbert Taylor, R. J. MacArthur, S. R. Evans. **Auditor:** W. M. Scott (Cleveland, Son & Hislop).

5th Year ended June 30, 1953. Meeting October 15, 1953.

Profits of the parent company were £4,692 lower at £15,345. onsolidated results, which include the S. R. Evans subsidiary or the first time, show a profit of £19,069, some £3,000 lower han last year. Dividend was unchanged at 15%.

In addressing shareholders at the Annual Meeting held on ctober 15, the Chairman (Mr. W. T. Cottman) said:—

The net trading profit, before tax, of the Cottman subsidiary, as approximately £24,700, and that of the Evans subsidiary, approximately £4,800, which resulted in a consolidated net profit, efore tax, of £29,715, as mentioned in the Directors' Report. The ompany, in common with all other public companies, has felt onsiderable benefit from the reduction in Federal Income Tax nnounced in the very good budget recently brought down by the 'ederal Treasurer.

As indicated to you in my last address the A.J.S. Agency was ransferred to the Evans Subsidiary in September, 1952, and this ove entailed a certain amount of re-organisation and adjustment f staff, etc. Considering this, and the very difficult year that has btained throughout the motor industry generally, and the motor-ycle trade in particular, your Directors consider these results ery satisfactory, particularly as we have not yet felt the full enefit of the activities of the two subsidiaries operating indeendently.

The Consolidated Profit and Loss Accounts show net profits for he year of £19,069 after tax, and although this is somewhat lower han previous years, your Directors recommend that, having regard o the strong financial position of the Company, a final dividend of d. per share, plus 6d. per share bonus, absorbing £10,000, be paid, aving a balance unappropriated for the year of £4,069 which, dded to the amount brought in, leaves a total balance to be arried forward in the consolidated accounts of £41,868.

You will notice in the Consolidated Balance Sheet an amount of £15,000 invested in debenture stock. Your Directors considered it prudent to invest this surplus cash in short-term debenture stock, as the cash surplus was brought about by a big reduction in stocks held at June 30, 1952. As the season advances it is anticipated that this sum, as well as the credit available at the bank, will be employed in increases to stocks in hand and in hire purchase accounts due by customers.

Trading Conditions

While full relief from import restrictions has been given in spare parts and accessories, we are still handicapped by restrictions on the importation of motor-cycles themselves, though these restrictions have recently been eased somewhat, and we look forward to further relief in this direction.

A considerable handicap to trade has been felt during the past year by the tremendous increase in insurance premiums, particularly on the higher-powered machines.

During the year, the Cottman subsidiary acquired the agency for the "CORGI" Motor Scooter. This economical type of transport is becoming increasingly popular, and this vehicle, manufactured in England, was amongst the first in the field, and its name was made famous by its use by paratroops during the last war. Although only recently acquired, very promising sales results have already been obtained from this agency.

Speaking generally, the trade is recovering from the recession which obtained last year, and a more optimistic outlook for the future is fully justified.

The following comments by the Chairman, Mr. H. G. Carter, were circulated to shareholders with the Annual Accounts:—

The past year has again been a record one, a record in almost every respect—in turnover, in output, in efficiency, in prospects—and by no means the least—in tax provisions.

The financial statements accompanying this report disclose a healthy state of affairs; our reserves have been increased to £100,000 while the amount available in unappropriated profits has been nearly doubled—an increase from £11,278 to £21,807. Fixed assets have been increased by improvements to property (principally by building additions to the Melbourne factory) and additions and alterations to plant, fixtures and fittings. These assets may be said to be in first-class order and in a position to meet greater production than ever before.

It will be noted from the Balance Sheet that the value of work in progress £335,491 shows a large increase over that of the previous year and that on this occasion progress claims actually exceed costs by £30,462, which figure, therefore, appears under current liabilities. Included in work in progress are a number of large contracts which were substantially complete at balance date.

A further sum of £2,071 has been expended in completing alterations to Melbourne property making in all a total expenditure of £4,228 on this property. A substantial proportion of the cost includes modern amenities for the employees.

The trading profit for the year has increased by £36,054—i.e., from £62,593 to £98,647—after providing for taxation and employees' profit sharing bonus (which has increased from £7,895 last year to £15,573 this year) we have a net profit of £41,875, or some £12,968 above that of last year.

Personnel

I intimated in my report last year that a company's results cannot be adequately judged by its financial returns only—however good these may be—the personnel of the organisation and its "morale" are two factors which have now become recognised as being of equal importance and it is only by the proper blending of this trinity (money, men and morale) that real progress is made. The true status of this blend can only be known to those more directly concerned with the Company's activities; it is difficult accordingly for accurate comparisons to be made based on figures only.

It is with pleasure that I am able to report the greatly improved efficiency throughout the whole organisation—this statement applies to all branches and is reflected in the great increase in the profit sharing bonus, which has been well earned by all concerned.

Industry generally is now devoting far more attention to m and the intangible factor of morale. Results in this regard a often slow in appearing and it is hoped that the efforts now bei more widely made will be continued and intensified. We have se over the first half of this century the gradual whittling away that mutual confidence between management and employees. Su doctrines as "The boss is your enemy" and "It's a crime to ma a profit" have been widely promulgated and while not general accepted have helped to undermine satisfactory industrial relatio

The concerted efforts now being made will, it is hoped, gradual restore this confidence and help us to regain our national streng and unity, quite apart from its obvious effect on industry its and our economic structure. This country is now feeling more a more the necessity to determine its own national status in the fa of all the racial and other conflicts taking place around us. T cementing of industrial relations will go far in this regard a provide true national leadership.

Contracts

The Company's operations over the past year have includ items of some note in which no doubt shareholders will be i terested. One of the most important of these is a contract for t Mount Isa Mines, which was secured over heavy competition. Th installation is an above ground air cooling system using two 3 ton centrifugal refrigerating machines.

The Mount Isa Mines are unusual geologically in that there a several ores in the one area, with mining activity largely in silv lead and zinc. However, this new mine cooling system will for the development of copper.

Although these mines are not very deep, they require cooli because of the high ambient temperatures at the surface, whi frequently reach 110 to 115 degrees F. with high wet bulbs. W bulb conditions, 1,600 ft. deep are in the vicinity of 86 to 89 grees, far too high for any kind of working efficiency.

The Company is also air conditioning certain of the living qu ters and hospital bays in the new "Daring" class destroyers i the Australian Navy, to maintain the fighting efficiency of t personnel.

Each installation consists of three 30-ton chilled water frigeration centres with reciprocating compressors, and water coo condensers. The chilled water is then circulated to cooling un to serve the various spaces through supply ducts. This installati has been specially designed to give the minimum space and weig and also to withstand heavy shocks which are likely to be met w under active service conditions.

The Company has nearly completed substantial contracts from Courtaulds Australia Ltd., in connection with their establishment of the first rayon manufacturing factory in Australia.

These installations are amongst the largest textile mill air conditioning plants ever carried out in Australia. We are providing controlled conditions for the manufacture of both acetate and viscose rayon yarn as well as for the usual preliminary manufacturing processes for the conversion of the yarn into commercial products. There are also subsidiary installations for certain of their laboratories.

I was personally congratulated by the Chairman of Courtaulds Australia Ltd., on the manner in which this Company's work was being carried out.

Room Units

I mentioned last year that the Company was engaged on the production of what are known as "room units." The need has been apparent for some time for self-contained air conditioning units of high-grade finish and appearance, which can be installed within the conditioned rooms themselves. The availability of such units would greatly widen the scope of the Company's activities in that they would make it entirely practicable to provide air conditioning in buildings which could not be handled by units using ductwork and requiring plant room space. They also enable a very worthwhile reduction in cost of an installation to be shown.

It was therefore decided to develop such units and the two illustrations on pages 4 and 13 can be said to be the first fruits of this work. They are based on somewhat similar units made by Carrier Corporation in America but have been re-designed to meet the requirements of local conditions and local authorities. Their American counterparts are proving highly successful and we look forward with every confidence to their future.

Staff

The work of our General Manager, Mr. A. R. Morris, and his whole executive staff has been of the highest order; the results of the past year's operations reflect this. It is with much gratification that I convey the thanks of my colleagues of the Board of Directors—and I am sure, of the shareholders—to Mr. Morris and his executive for the splendid results achieved.

The Company is now in a strong position all round, while the volume of work in hand is more than sufficient to cover next year's operations.

It can proudly carry forward the banner of the founder of commercial air conditioning—Dr. Willis H. Carrier.

In addressing shareholders at the Annual Meeting held on September 30, the Chairman made the following remarks:—

I analysed the Accounts and gave some description of the Company's operations in the report. In my description of the Company's operations I have outlined more particularly, three installations of a major nature. I do not wish to give the impression from outlining these three major contracts that they, more or less, constitute the major proportion of our business, that is far from being the case. Our business covers not only big jobs but also a large number of small and medium jobs which cover all types of minor but intricate installations. These add considerably to the Company's turnover.

The performance of the last year, as we have set out, is definitely a record. I commented in the previous year's report that that year was a record and this year has gone one better and that the work in hand in the start of the first two months of the year seems to indicate that we are at least equal to last year's record and from all indications, we will do better.

New Products

Air conditioning and air conditioning devices, like a lot of our social improvements over the past few years, are rather slow in "getting on" as you might say. The Carrier Corporation of America experienced this slow movement during the early stages but the acceleration is beginning to be felt. These room units that are here and which we hope to commence selling this summer have a market now of something like half a million sold in America and there are something like 22 firms selling them.

If we go on a proportionate basis of population, we are about 1/15th of the population of the United States, maybe a little bit more, but if you divide half a million by 15 you can visualise a very fair market for these units here. It cannot be expected to make a rapid movement over the first year or two but we do hope to make progress as in America to-day.

I have mentioned the work of the General Manager and his Executives over the past year. I think this requires a little more elaboration, and wish to express how grateful the Board are for the way you have teamed together and produced the results you have. It has been a great pleasure, I might say, to work with you people, you are a very harmonious team and it is a very happy team and the results are in no small measure due to the leadership that has been created by Mr. Morris and my hopes are that it will continue.

Staff Retirement Fund

You may be interested to have some details of the Staff Retirement Fund which was instituted by the Board in 1941. This was instituted for the purpose of giving the employees an added incentive to remain with the Company and secondly to give them a lump sum payment on their retirement.

At the present moment the number of members actually enrolled in the Fund now totals 70 and accumulated funds up to June 30, 1953, amounted to £14,564. These funds have been invested in various Companies. Included in these investments is the holding of 2,930 ordinary shares and 2,050 preference shares in this Company.

Last year the amount provided by the Company amounted to £4,383 and since its inception an amount of £2,729 has been paid out in the way of benefits. This gives you some idea of exactly what is being provided for retirement and what has been done up to the present and how the Funds stand at the present moment.

The Cascade Brewery Co. Ltd.

Reg. Office: Collins St., Hobart. **Directors:** H. Allport (Chairman), A. J. Miller, C. H. Grant, D. E. Hopkins. **Auditors:** C. A. Bennetto; H. W. Woolley.

70th Year ended June 30, 1953. Meeting September 3, 1953.

Profit was £7,408 lower at £48,141, and a dividend of 5% is paid after last year's omission, which was due to the need to conserve funds.

In his address to shareholders at the Annual Meeting on Sep tember 30, the Chairman, Mr. J. D. Garland, made the followin remarks:

Since the initial issue of capital on incorporation there ha been no further issue, therefore paid-up capital remains at £100,00 Unfortunately, due to the adverse trading result no dividend ca be recommended.

Difficult Trading Conditions.

As predicted in your Directors' Report for the year ended Jun 30, 1952, the financial year under review has been a most difficu one. Unfortunately, our trading results were most adverse affected by many factors, some of which I shall outline for you

(1) **Overhead:** It is unfortunate that even though industr generally experienced a recession, costs continued to rise, and th company, in common with others, had to meet increases in wage vehicle registrations and insurance premiums. When a large fle of vehicles is involved, these increases can be a major factor the ultimate trading result of a company such as ours.

(2) **Idle Units and Decrease in Turnover:** When it is realis that vehicles valued at thousands of pounds were rendered id during portion of the year just completed, the results are perha understandable. The continuation of the general business rece sion over the last twelve months meant that there were less goo for transportation generally, and competition for the availab haulage became correspondingly keener. Owner-driver haulie operated interstate road transport units at greatly reduced rate and the restrictive effect of full reimposition of road tax by t New South Wales State Government became increasingly appare as the year progressed. In addition, the continuation of severe ir port restrictions during the year contributed to the unsatisfacto trading result, and these factors resulted in a substantial d crease in turnover. This decrease, coupled with increases in ove head generally, resulted in the trading loss as shown.

Depreciation.

Although the trading results for the year were unsatisfactor your Directors considered it wise to implement their policy of pr viding heavy depreciation, and shareholders will note that duri the year ended June 30, 1953, depreciation to the extent of £10,8 was included in the company's accounts, as against £9,760 for t previous year. All vehicles—idle or otherwise— were under co stant maintenance, and the opportunity was taken of completi essential major overhauls, for your Directors realise the value a fleet in first-class condition—each unit ready to be pressed in service immediately it is required.

Properties.

During the year the company acquired freehold land and buil ings situated at Montague Road, South Brisbane, which will used as a store. With the recent announcement of the easing

PLAN FOR PROBATE

IT PAYS TO PLAN FOR IT NOW!

State and Federal Duties can be heavy charges on your estate, reducing the assets you have built up for the security of your family and dependants.

Here are a few examples of the death duties payable on estates passing to a widow and children:—

Net Estate of £10,000	*Duties £796*
Net Estate of £25,000	*Duties £3,448*
Net Estate of £50,000	*Duties £11,190*
Net Estate of £100,000	*Duties £36,062*

CAN YOUR ESTATE CARRY THE BURDEN OF DEATH DUTIES?

Why not plan your family's future security in consultation with National Trustees Company? The intelligent planning of your estate's affairs will ensure a definite financial gain.

You are invited to call and discuss the problems of your own estate with one of our experienced officers without obligation of any kind.

mport restrictions, it is felt that once again there will be extensive scope for storage in Brisbane, and your Directors feel that he new property can be put to good and profitable use in this irection.

Prospects.

Whilst it is still impossible to forecast the future trend of rading with any great degree of accuracy, your Directors feel hat prospects are somewhat brighter than at this period last year. Despite the retention of the heavy N.S.W. road tax, there has been an encouraging renewal of interest in interstate road haulage. In addition, certain of the company's long distance units have been brought into service on a local long-term contract. Local haulage continues to show a considerable increase, and it is hoped that with the easing of the import restrictions, haulage in the overseas shipping section will improve considerably. Your Directors continue to have the utmost faith in the future of this company, and trading results for the months of July and August, 1953, substantiate their views.

Thanks.

In conclusion, I should like to express my appreciation of the work of my fellow Directors for their untiring assistance during this most difficult and trying period. They have spared no effort to explore every possible avenue of expansion, and I know that, together with myself, they will continue to give the business their closest interest and attention.

To members of the staff, I should like to express thanks, on behalf of the Board, particularly to the executive personnel, who have assisted us through a most difficult period.

"Demand is such that your directors have decided to increase substantially the capacity of the mill, and to this end have entered into contracts for the necessary extension of the factory buildings at an estimated cost of £28,000, and for purchase of requisite plant costing £42,500," said the Acting Chairman, Mr. L. A. Sayers, in his address to shareholders at the Annual Meeting on October 9. His address reads:—

Balance Sheet

You will recall that during last year the capital of the Company was increased by £35,684, thus we had the use of the issued capital of £142,734 for the full year and, so far as capital expenditure is concerned, this year has been one of consolidation with the result that this, our fifth Balance Sheet, indicates a sound financial position.

Trade debtors are much the same as last year, but the stocks on hand (fully adequate for the business) are down £10,248, whilst current liabilities have been reduced by £17,173. Deferred liabilities, being mortgage on land and buildings (to which I will refer later) were increased by £4,000, and our net assets are now £174,633, an increase during the year of £13,180 which, of course, apart from a small amount added to the carried forward balance of profit is attributable to £12,500 added to general reserve out of this year's profit. General reserve now stands at £27,500, a really creditable figure for a Company only five years old.

Profit and Loss Statement

We enjoyed an uninterrupted year's manufacturing, making full use of the complete plant, which was used to capacity throughout the year to the end that we obtained a net profit of £23,885, after providing for income tax amounting to £15,000, a most satisfactory result.

Your Directors, wishing in your interest to place the Company on a firm financial basis, have transferred £12,500 to General Reserve and, recommending a conservative dividend policy, propose that this year's dividend be the same as last year, viz.: 7½%, absorbing £10,705 which leaves £4,355 to be carried forward in Profit and Loss Account.

Expansion Plans

The Company, having passed the initial and developmental stages, is now firmly established and providing a quality yarn of high standard and thus attracting business to ensure maximum use of our present plant.

In fact, the demand is such that your Directors have decided to increase substantially the capacity of the mill, and to this end have entered into contracts for the necessary extension of the factory buildings at an estimated cost of £28,000, and for purchase of requisite plant costing £42,500.

Finance for this capital expenditure has been arranged by additional advance on mortgage of £15,000 (of which we received £4,000 prior to June) and extended terms for payment of the plant. It is hoped that, assisted by temporary recourse to Bank accommodation, the balance of the funds needed for this expansion may be obtained from earnings of the Company.

This expansion programme was decided upon after the return of Mr. Hirst, the Company's Manager, from a visit to the United Kingdom, where he thoroughly investigated avenues of procuring additional plant; and after a visit to Australia of Mr. Joseph Smith, our Director resident in England.

Mr. Smith, who is himself a prominent yarn spinner of Yorkshire, England, was most impressed by the mill and organisation at Shepparton and expressed himself as well satisfied with the whole of the Company's set-up.

There is still a substantial demand for fine two-fold yarn as produced by our mill and the expansion programme now in hand will double our spinning capacity of this type of yarn.

The machinery purchased is the complete spinning plant of Arnold Bros. Ltd.., of Yorkshire, which was thoroughly inspected, under operating conditions, by Mr. Hirst. He reported that the acquisition of this complete plant, in similar fashion to our original purchase of a then-operating plant (and which has proved highly satisfactory) was the most effective and advantageous method of implementing the Board's decision to duplicate the output of the mill. The plant has been acquired on most favourable terms as to price and period for payment.

The plant is due to arrive in Australia early next year and we hope to have it installed and operating before the end of the financial year. We look forward with confidence to a considerable expansion of the Company's activities.

During his visit Mr. Smith travelled extensively in Australia, and had contact with a considerable number of executives connected with our own and associated industries, and was most impressed with the potential of this, our own Company. The Company has benefited greatly by his visit and your Directors much appreciate the information and advice which Mr. Smith brought to the Board. He, and Mr. Kaye, continue to be of invaluable assistance to us in England, and for which we are much indebted to them.

Appreciation

The progress and consolidation of the Company, to which I have referred, is almost entirely due to the initiative and enthusiasm of our Managing Director, Mr. F. G. James, and to the knowledge and ability of our Manager, Mr. Hirst, and to these two gentlemen I tender, on your behalf, our appreciation and congratulate them on a most successful year.

Courtaulds (Australia) Ltd.

Rayon Manufacturers and Processors.

Reg. Office: 203 Clarence St., Sydney, N.S.W. **Directors:** R. J. Vicars (Chairman), J. M. Baillieu, Col. F. T. Davies, G. H. Grimwade, Dr. R. W. Harman, S. Hordern, J. T. McKee, F. Williams. **Auditors:** Flack & Flack; Binder, Hamlyn & Co.

4th Year ended June 30, 1953. Meeting October 8, 1953.

The debit balance on operations of £78,632 for the year (after depreciation £35,553) was again transferred to establishment account, bringing the total to £195,829. At balance date the factory at Tomago, near Newcastle, was almost completed. Expenditure on fixed assets was over £5 million as compared with outstanding commitments totalling £600,000.

Spinning of acetate textile yarn commenced in April, 1953. The largest section is the spinning of viscose yarn for tyre manufacture and other industrial purposes, which is to commence late in 1953.

The company's application for tariff protection has been fixed for hearing in October/November.

Net tangible asset backing (book values in consolidated balance-sheet)—18/7 for each £1 ordinary share. Deferred shares are not listed.

"I am confident that the organisation which we have built up will be well equipped to reap the greatest measure of advantage from the future of rayon. We confidently believe that our products will take and hold their place among the basic textile fibres," said the Chairman, Mr. R. J. Vicars, in his address to shareholders at the Annual Meeting on October 8. His address reads:—

In examining the Directors' Report and the Balance Sheet and Profit and Loss Account for the year you will notice that Consolidated Accounts have also been added. This is because it has been found necessary during the year under review to form a subsidiary company, Tomago Pty. Ltd., to which I will refer later.

Profit and Loss Account

The Profit and Loss Account discloses a debit balance for the past year of £78,632. This compares with last year's figure of £53,682, and your Directors have decided that this balance should be again transferred to Establishment Account. It is not considered that the Establishment Account which now stands at £195,829 is by any means unreasonable when considered against the expenditure of fixed assets of £5,281,610; furthermore, plant erection and labour training reached a peak during the year under review.

In view of the fact that building construction, plant erection and labour training reached a peak during the year these results are not considered unsatisfactory when related to the overall size of the project.

We are now approaching the moment at which our project will be complete, and cannot therefore avoid incurring considerable start-up expenses as each section of the plant comes into operation. This year we have also had to face expenditure incurred in transferring the majority of the senior executives from Courtaulds Limited who are essential for the operation of the factory. Currently we are in a period of unremunerative expenditure on start-up costs, and we have furthermore thought it prudent to write off a large part of our temporary installations in this year's accounts. These installations are necessary to operate the factory during the development period, and insofar as a large part of these are now of no further or very limited use to the completed factory, they have been depreciated at rates relating to their actual value in the completed project. The revenue from limited trading and the operation of our sales agency for Lustre Fibres Limited has gone some way towards offsetting this burden.

During the month of April we were fortunate to receive a visit from Sir John Hanbury-Williams, the Chairman of Courtaulds Limited, and we were able to discuss all our outstanding problems with him, and to receive the benefit of his counsel and encouragement.

Factory Construction

Last year I was able to report to you that progress, particularly in factory construction and erection of plant, had been most satisfactory, and that the start-up date of various sections of the factory would follow the forecast made in the Prospectus. I am now able to report that the section of the plant devoted to the spinning of Acetate yarn started initial operations on 28th April, seven months ahead of the estimated completion date. Small technical difficulties which must inevitably arise in such a start-up were quickly overcome, and I am pleased to say that this unit was quickly spinning a yarn which has been judged by our customers to be as good, if not better than other similar yarns availabl from overseas sources. Our output has been somewhat restricte by the late delivery of some of the processing equipment, but w are now in a position to supply this yarn in suitable deniers to th warp knitting and weaving trades. The yarn produced at Tomag is being marketed under the trade name, "Chrysella."

Progress towards completion of the Viscose spinning unit fo tyre yarn is reasonably satisfactory, and the first of the two spi ning units should be ready by the end of 1953. It has been fe prudent to inform the four rubber companies who are the end user of the yarn and fabric produced by our Company that they ca expect full production in the second quarter of 1954, and quantitie of fabric produced from our own yarn will be available for trial during the first three months of that year. Meanwhile good pr gress has been made towards the operation of the conversion c yarn to tyre fabric at full capacity, and although this business ha taken some time to develop in view of the stocks of fabric hel by some of the companies from earlier imports it now appear that our conversion capacity should be fully extended by the b ginning of 1954. I should add that we are quite satisfied wit the quality of the fabric produced, and have been able to meet a the specifications placed before us by the rubber companies. Tha we have been able to achieve this satisfactory degree of completio of plant and operation is largely due to the devotion and energy o the Project Engineer and his staff who are in charge on beha of Courtaulds Limited of the supervision of the erection of th factory and the installation of plant, as also to the foresight an wholehearted efforts of your Management and senior executive At this stage of our progress there are many problems concerne with the final equipment and operation of the factory which requi the closest co-operation between your Management and the exec tives of Courtaulds Limited in Australia, and I am pleased to sa that this is being achieved in the highest degree.

Now that we are nearing completion of work on the buildin and equipment of the factory I am particularly glad that it wi be possible for Mr. Verrall, who as you remember is a Director Courtaulds Limited and their Chief Engineer, to visit us once agai during this year. His visits have always been of the greate value to your Company, and once again we shall feel that th action of the Board of Courtaulds Limited in releasing Mr. Verra from his important work in England is an illustration of the ver keen interest and valuable assistance which our Associated Com pany in England have at all times been ready to give. I shou add that during the present months when problems do arise co cerned with the adjustment and operation of plant Courtauld Limited have flown out without delay a number of their be technicians.

Financing of Construction Costs and Working Capital

Last year I told you that we were encountering the effect o increases in costs, and that in consequence it was inevitable tha the capital cost of the factory must be greater than the origina estimates made in 1950, although every attention was being pai by the Management to the most rigid economy. We have no reached a stage in our progress when a better picture can be ob tained of this position, although it is still not possible to mak a complete assessment of the total cost of the construction an equipment. In very round figures, however, it seems that it ca be expected that the increase in the total cost will amount to som

that less than 30% on the detailed estimates made early in 1949. In accordance with the plans revealed in the Prospectus of the company, however, to these estimates was added a substantial contingency which was fully covered by the issued capital of the company. In consequence of this it would appear that a large part of the increased cost will be covered by this contingency allowance, and for the balance by which the total cost will exceed these provisions Bank accommodation has been arranged.

In the original planning of the Company no provision was made for Working Capital, and you will recollect that in the Prospectus it was stated that it was the intention of the Board to make this provision to the extent needed at the time by means of Bank overdraft, credit secured on stocks, or the issue of loans, or additional share capital. Your Board has found it possible to arrange for such capital to be available from Bank overdraft.

Personnel and Housing

As I forecast last year, the migration of virtually all the key personnel including the senior technical executives was complete by the end of the year under review, and by careful integration it was found possible to ensure that all personnel transferred from Courtaulds Limited to your Company, whether staff or employees, arrived at the correct moment, and could be provided without delay with suitable accommodation under the Company's Housing Scheme. In no case was the operation of any part of the factory delayed by late arrivals or incorrect planning, and now that only a very small number of junior personnel are still to arrive I think that you should know that the provision, training, migration and settlement of key personnel has been perhaps the problem which has given the most concern to your Management, and has only been so successfully achieved by the high degree of co-operation in matters of detail between the relevant departments of Courtaulds Limited in England and the Management of your Company. The story of this part of the project is of the greatest interest, but unfortunately time does not permit me to tell it in great detail. It must suffice to say that despite the apparently insuperable difficulties, particularly earlier in the project, land was secured, the various types of houses were designed and placed out to contract to be built, and were in fact available at the correct moment for the incoming occupants whose arrival had also to be timed to coincide with the start of their duties in the factory and the completion of their training in England. Provision had also to be made for their reception and for the speedy equipment of their homes to suit individual tastes. We are justifiably proud of the extension to the town of Raymond Terrace which has grown up on the left-hand side of the Pacific Highway on entering the town from the south, and is in fact the main housing estate for junior staff and operatives. These houses are being rented or sold to the occupants as they elect. As I reported two years ago, the finance is being made available by the Bank of New South Wales and the United Insurance Company, and where the occupant decides to purchase, this is arranged through a building society. For certain secondary matters concerned with collection of rents and operation of loan schemes to employees it has been found necessary to establish a subsidiary company, Tomago Pty. Ltd., which is solely concerned with these practical functions.

Since last year some progress has been achieved towards the provision of housing for our Australian personnel who are not already residents of the district. Owing to certain changes and economies which have been made in planning, numbers of overseas personnel required for the operation of the project, it has been found possible to make available thirteen of the Company's houses to be rented or sold to Australian staff or employees on equivalent terms to those offered to families from overseas. In addition the New South Wales Housing Commission has informed us that they are proposing to make available a total of 91 houses for allocation to our nominees who are otherwise eligible for the State Housing Ballot.

We are also well pleased with the operation of our Hostel which was opened on September 29, 1952, and which provides accommodation for over forty operatives. The purpose of this hostel is firstly to attract skilled tradesmen to the district for work on construction and equipment, and secondly to give living facilities to such men who seek employment with us on a permanent basis, and who are unable to bring their families into the district until they can establish a case for the provision of housing through the Housing Commission. At the present moment all the rooms in the hostel are occupied.

Appreciation

Once again we have cause to pay tribute to the assistance which has been given us on all levels by officers of local authorities and of the departments of the Federal and State Governments, who in every way have been readily prepared to do everything possible to provide all facilities within their power.

Trading Operations

I must now deal with the trading operations of your Company during the year under review. You will recall that in my statement last year I told you of the effect of the recession in that year, and stated that it was only towards the end of 1952 that there appeared to be an improvement in this position. I am glad to say that this trend continued, although in all branches of the textile business it was apparent that individual companies were seeking to avoid once again being caught with substantial stocks of raw material on their hands. In consequence, the sale of rayon textile yarns and fibres was regulated by more carefully planned purchases by the customers. Nevertheless, a successful year was achieved in the operation of our agency on behalf of Lustre Fibres Limited, and the commission on these sales has been of assistance to the Company to offset some of the expenses, which, as already reported, have necessarily been incurred in other directions. With this firmer tone in the textile market we were able, too, to launch satisfactorily the sale of warps produced at Tomago for the knitting trade from Acetate yarn imported from England. This business gave us the opportunity of supplying customers with trials of spinning twist yarn similar to that which would be produced by ourselves, and it was satisfactory that such customers as we could provide on the basis of the limited quantities of yarn available to us were more than satisfied with the product and the fabric resulting therefrom. This has also helped us to educate our processing operatives in the problems concerned with this particular new form of production, and has paved the way for the sale of warps processed from our own yarn spinning at Tomago which are now being sold to warp knitters, together with the provision which we are making for the rayon weavers. I shall mention later, however, that development of the market for Acetate rayon textile yarn and the profitability of its sale is very largely bound up with the application which this Company will be making in the course of the next fortnight before the Tariff Board.

Although at the end of 1952 prospects for the sale of tyre fabric converted from imported yarn were not very favourable, an improvement in this position occurred at the turn of the year, and we have been able to supply considerable quantities of fabric to the rubber trade. This position has now so far improved that we are at present extended to the fullest rate of production compatible with the development of our conversion capacity to full running by the end of this year. On the present indications of the requirements of tyre manufacturers in the first half of 1954, we shall be fully occupied to meet orders already placed with us for conversion of overseas tyre yarn on commission, and as I have already stated we expect to provide a large part of the necessary yarn from our own spinning from the second quarter of the year. I should express my appreciation of the good relations with the rubber companies which have been cemented and founded on the mutual understanding of problems arising on both sides.

Tariff Protection

It has always been understood that the profitable operation of your Company must to a very great extent depend upon adequate assistance being provided by the Government on the recommendation of the Tariff Board in order to protect the higher level of costs both in construction and operation as compared with similar industries overseas. Hearings have now been fixed for the Tariff Board to consider the manufacture of rayon tyre yarn, cord and fabric, and textile acetate rayon yarn productions, and these will take place in ten days' time. The problems in the presentation of these cases which have had to be faced by the Management have been by no means straightforward, but your Board is quite satisfied that the form of presentation of the applications is in accordance with the best interests of your Company. The outcome of trading in our own products will very largely depend upon early and favourable decisions by the Government on these important matters for the Company.

This then is a brief survey of the progress and operation of your Company during the year ending 30th June, 1953. I cannot suggest that it has been an easy year for the Management who have had to face those problems which are associated with the end of a large-scale construction period and the start-up of manufacture. In the current year we still face a number of these difficulties.

Future Prospects

If I have in fact sounded a note of satisfaction in respect of our achievements during the past years, and particularly in respect of the year under review, I feel it only right to warn you at the same time that I foresee a considerable number of obstacles which we must overcome in the immediate future years, before your Company can be said to be firmly established. We still have a thorny path to tread, and much energy has to be devoted to foreseeing difficulties before they arise and in planning to overcome them. Apart from problems concerned with adequate protection we are perpetually facing changes in the requirements in our markets which can in themselves be influenced by technical developments in the industrial sphere and by variations in demand from the end consumer. In surveying the future, however, I am confident that the organisation which we have built will be well equipped to reap the greatest measure of advantage from the future of rayon. From time to time we hear much of the new synthetic fibres which have attained prominence during the last few years, and you may wonder how far they will compete both with the tyre and textile yarn production aspects of this Company. Some of these new synthetic fibres have many good and useful properties, but in nearly every case these are offset by definite limitations and in addition their cost is likely to be high. Although the world output of the fibres is growing year by year their total production up to the present only represents roughly 7% of the estimated world production of man-made fibres. We confidently believe that our products will take and hold their place among the basic textile fibres.

Staff

This year I would like to pay special tribute to the work of your Management and staff. I am sure that you would wish me to express your thanks to them for the way in which they have worked together to overcome the many difficulties and unexpected problems which they have had to face. With Sir John Hanbury-Williams, your Board feels most satisfied with the energy and general spirit of the staff and operatives of your Company.

Containers Ltd.

Reg. Office: 265-275 Franklin St., Melb. **'Phone:** FJ 1695. **Share Transfer Office:** 401 Collins St. **'Phone:** MU 8895. **Directors:** J. H. Kirkhope (Chairman), W. D. J. Higgins, J. T. Picken, Maj.-Gen. Sir Clive S. Steele. **Auditors:** Edwin V. Nixon & Partners; Spry, Clark, Tootell & Co.

4th Year ended June 30, 1953. Meeting October 23, 1953.

The sharp recession in "canned goods" industries caused a substantial decline in turnover and gross profit. After taxation at the new rates, net profit at £258,315 (compared with £386,923 in 1952) returned 8.7% on ordinary capital. Ordinary dividend, 1% lower at 6%, is from tax-free reserves.

*1953, tax paid.

†In 1953, credited with £114,344 share premiums and incl. profit on sale of fixed assets (1953, £17; 1952, £3,377; 1951, £37,222).

Ordinary capital was increased during the year by a 1-for-2 issue to stockholders at a premium of 2/6 per share, and the issue of 133,333 ordinary shares at par to acquire all shares in T. Dawson & Sons Pty Ltd. of Sydney. This subsidiary incurred a small loss to balance date, while plant maintenance and reorganisation were carried out.

To achieve greater efficiency in production and management control, the manufacturing and trading activities of certain subsidiaries have been combined and will be controlled directly by the Holding Company.

Formed in 1949, the issued capital of the following companies was acquired: Union Can Co. Pty. Ltd. (which in turn holds all the shares in Australian Can Co. Pty. Ltd. and 66⅔% of the capital of Kelso Trading Supply Pty. Ltd.), Southern Can Co. (Aust) Pty. Ltd., Dominion Can Co. (Aust.) Pty. Ltd., Fibre Can Co. Pty. Ltd., and J. T. Picken & Sons Pty. Ltd.

As Australia's largest can-making group, production includes metal boxes and containers of all types, cardboard fibre containers, and printing of labels and general commercial printing. In addition, market surveys, overseas technical information and laboratory research and design are available to clients.

Overseas affiliations include the Continental Can Co. Inc. of New York and The Metal Box Co. Ltd.

The following review by the Chairman, Mr. J. H. Kirkhope, was circulated to shareholders with the Annual Accounts:

The profits for the group, after writing off depreciation and providing for taxation, amount to £258,332. Dividends to preference and ordinary stockholders absorb £190,503. The balance of profit for the year has been retained in the business and applied, firstly, in writing off £27,280 being the expense (including the underwriting commission) incurred in the issue of 914,750 £1 ordinary shares in October, 1952, and secondly, in adding £18,750 to the reserve for future dividends on preference stock, which reserve is now equivalent to one full year's preference dividend. The balance is carried forward and, with other reserves and unappropriated profits available in respect to 1951 and 1952, the first two years of operations of the Company, makes a total of £338,846.

Reference was made in the review presented to the Annual Meeting of the Company in October, 1952, to the decline in demand for some of our products. The General Can Line Division and, to some extent, the Paper Products Division of the business depend largely upon the Australian domestic market and they experienced unusually poor conditions during the six months to December, 1952. However, a substantial recovery took place in 1953. At the time of the last review, the manufacture of food cans was up to forecasts, but early in 1953 the fruit packing season eased off abruptly, and this, accompanied by a marked decrease in local and export sales of canned foods, materially affected the turnover of both the open top and paper label sections. These factors had the result of causing the Company to carry larger quantities of tinplate in stock at June 30, 1953, than was planned. However, in all its sections of activity, the Company continues to receive its share of the market demand.

The total costs of many lines of canned food are now proving to be too high for canners to retain completely their former share of overseas markets, and even the local demand is reduced. Many public references have been made to this situation and it will not again be laboured here, although it is appropriate to add that production costs in Australia must be substantially reduced if we to compete successfully in all the world markets for which should cater.

Dividends

The dividends for the full year are at the rate of 6% a as announced, are exempt from taxation in the hands of sto holders. While this rate is not equal to the 7% anticipated w the Company offered to stockholders an opportunity to subsc for further shares in September, 1952, the reasons for the redu rate have already been made clear and the exemption from ta tion on these dividends should be borne in mind.

Income Taxation

Substantial relief has been provided to all public companies the announcement of the Commonwealth Treasurer (in the Buc speech on September 9) that the rate of taxation to be levied profits of public companies from July 1, 1952, would be redu from 9/- to 7/- on profits in excess of £5,000, and on the first £5 the rate would be 6/- in the £. The Consolidated Balance Sh and Profit and Loss Account presented show the liability for ta tion as adjusted in order to conform with the new rates.

The practice adopted by the Commonwealth of levying inc taxation at least twice in respect to the profits of compani once in the Company's hands and again in the shareholders' ha when received as dividends—is one which still imposes a very he burden. In the last review it was stated that this double taxa is economically and morally unsound, and this position rem unchanged.

Factory Operations

Reference has been made in the Directors' Report to the tegration of subsidiary Companies. With the recent completio the first section of the new factory at Northcote, Victoria, the commencement of operations there, consideration is being g to the economies and other advantages to be gained by combi the operations of some of the plants. The extension to the fac

n Adelaide has also been completed and the first unit for the manufacture of "open top" food cans has been installed. A factory as been acquired in Sydney with the purchase of the shares in . Dawson & Sons Pty. Ltd. Thus, in each State in which we re now operating, capacity has been extended for giving full ervice to canners and the packaging industry. Improvements to xisting plant and equipment, and the construction or acquisition f machines designed for higher quality cans and for greater speed re in hand.

Overseas Affiliations

During the year we derived both pleasure and benefit from a isit made by Sir Robert Barlow, Chairman of Directors of The fetal Box Company Limited, London.

We continue to receive much help from companies with which ontainers Limited is associated in England and in the United tates of America in all matters affecting technical and manufacuring problems.

Mr. J. T. Picken paid a short visit to the United States of merica during the year and took the opportunity of studying levelopments in the packaging field.

Industrial Relationships

The year has seen no interruption to the harmonious relationships experienced with our staff and employees. In many directions the zeal and enthusiasm shown in the discharge of their duties has been outstanding.

Plans have almost been completed for announcing the establishment of a superannuation scheme to replace the schemes formerly conducted by the separate subsidiary Companies. Facilities will be provided for members of those Benefit Funds or Assurance Schemes, if they so desire, to transfer their membership and their financial interests into the newly established Fund. Membership of Containers Limited Superannuation Fund will be open to new employees when they have become eligible. During the year ended June 30, 1953, there was set aside out of profits £26,525 for the benefit, upon their retirement, of six hundred and eighty-two employees. It is intended that the Fund will continue to be augmented in future years as profits permit.

To the staff and all personnel of Containers Limited and its subsidiary Companies I extend, with the Board and also on your behalf, an appreciation for their efforts during the year just closed.

Chas Steele & Co. (Holdings) Limited

Manufacturers of Transparent and Other Flexible Packages — Colour Printers and Paper Box Makers.

Reg. Office: 11-21 Michael St., Brunswick. **'Phone:** FW 4191. **Directors:** J. B. Fletcher (Chairman and Manag. Director), H. Gillespie, J. S. Coltman, S. B. Holder. **Auditors:** Wm. P. Jarvie, Son & Easton.

2nd Year ended June 30, 1953. Meeting October 22, 1953.

Profit was £14,000 higher at £62,343, reflecting the upward trend in sales. Dividend was raised by 1% to 9%.

The company was formed in 1951 to acquire the capital of Chas. Steele & Co. Pty. Ltd. which operates a business founded in 1899. Activities include the Designing, Printing and Manufacture of high-class packages of Cellulose Film, Aluminium Foil, etc., used by national packers throughout the Commonwealth.

In December, 1952 the company issued 92,000 10/ shares to acquire two Sydney companies, Viscose Products Pty. Ltd. and Viscose Products (Manufacturing) Pty. Ltd. 14,796 shares were also issued to one of the directors of these companies.

Activities of these two companies have now been amalgamated under the name of Chas. Steele (N.S.W.) Pty. Ltd.

In February, 1953, the company issued 203,985 10/- ordinary shares to existing holders. Proceeds were used to expand the business and to provide additional plant.

Net tangible asset backing (book values in consolidated balance-sheet)—11/7, allowing for uncalled capital.

The following report by the Chairman, Mr. J. B. Fletcher, was circulated to shareholders with the Annual Accounts:

It gives me great pleasure to present to shareholders this Second Annual Report of Chas. Steele & Co. (Holdings) Limited and to report that your trading companies have enjoyed a satisfactory year both as to sales and net profits. Sales have continued to show an upward trend and net profits have moved up accordingly.

The year has been a rather difficult one due largely to the fact that market conditions generally have altered and buyers are now much more selective and price conscious. Import licensing has also caused your Directors some concern, as your trading companies are big consumers of raw materials not yet made in Australia, and which we require to import principally from the United Kingdom.

Stock Position

I should point out to shareholders that our stock of raw materials is, today, at a figure very much less than a year ago, but your Directors have considered it prudent to use up big tonnage purchased to some extent at near peak prices to enable us to take advantage of replacing same at better prices if and when available. Your Directors are of the opinion that this policy is sound, and vigilance will be used in seeing that raw materials are made available to cover our expanding operations.

You were notified by circular letter dated December 19, 1952, of our intention to purchase the whole of the shares in the two Viscose Companies, Sydney, and you were further advised on January 19, 1953, of the new share issue to provide capital for this purpose. I can now report that these transactions have been completed. Your Directors have decided to discontinue the trading names Viscose Products Pty. Ltd. and Viscose Products (Manufacturing) Pty. Ltd. The name of the former has been changed to Chas. Steele & Co. (N.S.W.) Pty. Ltd., and will operate purely as a manufacturing unit.

Mr. C. A. Phillips, of the Viscose Companies, was appointed a Director of Chas. Steele & Co. (Holdings) Limited on December 18, 1952, and resigned from that office on June 30, 1953.

We continue to enjoy the keen enthusiasm and loyalty of all our executive officers, technicians and other workers, and to them I express thanks and appreciation.

Future

I am confident that the coming year and the future will see the continued successful growth of your company's business on sound and profitable lines.

Ducon Condenser Ltd.

Manufacturers of Electric Condensers.

Reg. Office: 450 Collins St., Melb. **'Phone:** M 1977. **Directors:** A. R. Persson (Chairman), H. H. Hecht, C. S. Gittoes (Manag. Director), J. Ogilvy, G. Rich. **Auditors:** R. H. Chown (Cullen, Ward); A. G. Cameron & Co.

21st Year ended June 30, 1953. Meeting October 21, 1953.

Despite difficult trading conditions, profit remained steady to return 17.2% on ordinary capital, after allowing for the preference charge. The 10% ordinary dividend was repeated. Taxation provision includes £5,000 for previous years.

In addressing shareholders at the Annual Meeting held October 23, the Chairman, Mr. A. R. Persson, made the followi comments:

The consolidated net profit of this company and its su sidiaries for the year ended June 30, 1953, and before providing f taxation, is £71,672, compared with £66,257 for the preceding yea

From the net profit, £26,033 has been provided for taxatio The amount available is therefore £45,639, as compared with £37,8 in the preceding year.

The last financial year was one of more than usual difficulti and problems in most spheres of business, and manufacturing w no exception. It is, therefore, with some satisfaction that we pr sent the results of our last financial year's activities, and as shov in the accounts.

The consolidated net profit of £71,672 is an advance of £5,4 for the previous year. It is gratifying that such a result w achieved in spite of the conditions which throughout the ye affected trade in general, and resulted in a somewhat small turnover at our factories.

Future.

During the year, considerable attention was given to r organising our production and its planning. We expect the resul of such planning will be effective in the present financial yea figures, and prospects for the coming year appear very good.

It is worth recording that female labour in English factori is paid for at the rate of £6 Australian currency per week of hours, against the rate operating in Australia of £10 to £11 p week of 40 hours. In addition to paying approximately 70% high wages each pay day, our employees work 253 hours less per a num than their English counterparts. These 253 hours are equiv lent to more than 6 weeks' work. This may be considered by sor social reformers as most commendable, and a sure sign of a lof standard of living in Australia.

However, management still has to keep its feet on the grou and see where the orders are to come from against such very di cult competition.

The import restrictions which applied last year proved of te porary benefit, and it now remains to be seen what steps will taken to equalise somewhat the effect of overseas competition. Th is of primary importance to all Australian secondary industri and by no means peculiar to our own undertakings.

Overseas Developments.

Your Directors have always been very conscious of the ne to keep fully abreast of world development in our own and alli industries. Our Managing Director, Mr. C. S. Gittoes, has just r turned from a very well timed and successful visit overseas. I spent several very busy months in the United States of Ameri and in England and on the Continent.

During this visit his attention was paid to all developmen pertaining to television, because of its expected introduction in Australia. A study of his contacts and negotiations abroad pro that developments exceedingly important to us are likely to r sult from his investigations.

New Factory Site.

During last year we completed negotiations with the Commo wealth Government for the acquisition of some 12 acres of la with buildings and improvements, at Villawood. Steps have be taken for the early commencement of the erection of buildings this site, suitable for our particular purposes.

The acquisition of this land and the erection of the buildin as now planned will enable us to concentrate most of our activiti in one centre and avoid the inconvenience of having various fa tories located in different areas. This will result in considerab saving in expenditure, as well as greatly improved efficiency management, supervision and planning.

In the planning of these buildings, due study will be given provide for the facilities for the implementation of a programm of general expansion. In order to provide for the new develo ments, for which we obtained manufacturing rights by the negoti tions conducted by our Mr. Gittoes, additional space and faciliti will be incorporated in our building programme, now proceeding Villawood.

It is appropriate to refer to the fact that the last financ year was the twenty-first since the commencement of this co pany, and we appear to be fully justified in anticipating anoth twelve months of full activity, and, we hope, with commensura results.

David Syme & Co. Ltd.

Printers and Publishers of "The Age" and "The Leader."

Reg. Office: 233 Collins St., Melb. **'Phone:** MU 9731. **Directors:** O. J. Syme (Chairman), H. A. M. Campbell, H. R. Syme, K. A. Syme, A. J. Moir, Sir Clive Steele. **Auditors:** Fuller, King & Co.

5th Year ended June 30, 1953. Meeting October 20, 1953.

Principally due to an increase in the selling price of "The Age" from 3d. to 4d., increased advertising revenue and cheaper newsprint costs, profit jumped from £29,593 to £120,181, permitting a 7% ordinary dividend rate to be resumed.

The following report by the Directors was circulated to shareholders with the Annual Accounts:

Directors are pleased to be able to report a substantial improvement in the company's position as compared with the preceding year.

The gradual general recovery in Australia after the setback in the first half of 1952 was reflected in a steady increase in the volume of advertising. In classified advertisements especially, "The Age" more than maintained its well-established leadership. During the year individual advertisements published in "The Age" exceeded one million—over 700,000 more than all other Melbourne newspapers combined.

Supremacy in this medium combined with the enhanced prestige enjoyed by "The Age" as a responsible and dependable newspaper, sustains a unique relationship between the paper and the general public. There is a growing realisation of the value in every community of a daily newspaper founded on faithful reporting and informed but impartial interpretation, and during the year there have been many evidences that "The Age" is appreciated for these services and qualities.

As it has been possible to increase the size of the paper, news services have been extended and special features improved.

"The Leader," our national farm and stock weekly, continued its service to the man and woman on the land. The greatly increased volume of advertising carried by this journal reflects its growing influence among primary producers.

In the opinion of the Directors, trading has not been materially affected by items of an abnormal character.

During the past twelve months, the price of newsprint has been slightly reduced. At present, however, it is not possible to say whether that trend will continue. In the first three months of the current year, the volume of advertising has been higher than during the same period of last year, and prospects for the whole period are encouraging.

The production of the larger paper, especially of the 52-page issue on Saturday, with as many as 350 columns of small advertisements, is an outstanding achievement in the newspaper industry. This has been successfully accomplished despite difficulties created by the rebuilding of the premises, which is still proceeding. Success in this respect and in other phases of the company's operations, is due largely to the willing and efficient services of members of all sections of the staff, to whom Directors express their appreciation.

TRUST ESTATES
AND TAXATION

PROBATE AND ESTATE DUTIES

In considering the impact of death duties on any particular estate, present or prospective, there are three matters to be determined; first, the amount on which duty will be levied; second, the rate at which duty will be levied; and third, the allocation of the burden of the duty between the persons interested. (*Extract from the Equity Bulletin for October,* 1953.)

On request, we shall be pleased to place your name on our mailing list to receive the Bulletins regularly.

The following address was given by the Chairman, the Hon. A. G. Warner, M.L.C., to shareholders at the Annual Meeting held on October 28:

The Company had a record year, both as to trading profits and the amounts placed to reserves.

The increased profits have been made possible by the reduction in taxation and the past policy of the directors in setting aside a substantial and steady appropriation of the profits to reserves.

The total reserves and unappropriated profits as shown by the Consolidated Balance Sheet, are now close to one million pounds, almost equal to the ordinary paid-up capital. During the year, the reserves were built up by £237,230, mainly reflected in the following movements:

£130,000 was placed to General Reserve, which includes £30,000 being a transfer of excess provision for doubtful debts;
£72,265 Share Premium Reserve resulting from the purchase of the Servex Company;
£32,178 excess depreciation, disallowed by taxation laws and upon which tax has been paid.

Referring again to the profit of the company, it should be noted that the Servex company was not acquired until the latter half of the year and at the worst trading season for this particular company; consequently, in the short term during which we owned the company up to June 30, 1953, it contributed only a small amount to the accounts of Electronic Industries.

The increase of £212,095 in freehold property is accounted for by the inclusion of the Brunswick and Sydney properties owned by the Servex company; the final payment on the new factory at Oakleigh; and the purchase of freehold properties at Adelaide Ballarat and Shepparton.

You will be pleased to notice that in the Consolidated Balance Sheet, stock was reduced during the year by £275,483, in spite of the inclusion of the Servex stock. We were able to achieve this by the removal of the necessity to carry large stocks of goods previously difficult to acquire.

The combined turnover of the companies owned by the group reached an all-time record and is reflected in an increase of book debts—£577,662, a considerable portion of which took the form of hire-purchase debtors, for which there had been a steady increase in demand during the year.

The ratio of current assets to current liabilities is highly satisfactory—current assets at £3,636,411 being nearly double the current liabilities of £1,980,935.

Our factories are all equipped with the most modern plant pable of maintaining our current production of radios, washing achines and refrigerators. We have acquired properties in other ates for office space and warehouses for the subsidiary com- nies, whilst our factory at Oakleigh, in which it is proposed make television tubes, is being slowly equipped with plant and achinery for that purpose. The Company has, in fact, reached e stage where three-quarters of its ordinary subscribed capital invested in property.

Television

Television has already been introduced in practically every vilized country throughout the world and it is now over a quarter a century since it was originally shown in the United Kingdom. e do not believe that the advent of television can be obstructed r much longer by the vested interests in the entertainment field. ccordingly, we are building and acquiring factory space for the rpose of our current expansion, and also having regard to their quirement for television production. The additional plant which e are constantly acquiring is, where possible, bought with an re to its possible use in the television field.

Servex Company

We are glad that we were able to secure Capital Issues consent for the re-acquisition of the Servex company, which you will remember was sold by us to shareholders in order to provide capital when we were unable to secure permission for an increase from the Capital Issues Board in 1951.

The Servex business fits like a glove into the activities of the other companies and places us in a position where we are able to manufacture a wide range of domestic appliances to sell as merchandise with our radio receivers to the trade generally and through our own distribution channels.

Current Trading

The current year has opened well and if present indications are reflected in next year's Balance Sheet, those shareholders who have expectations of the continued growth of the Company should not be disappointed.

Mr. H. P. Abrahams, who has acted as Deputy Chairman for a number of years, has been formally elected to that position.

Daniel Scott Industries Ltd.

eg. Office: Williamstown Rd., Port Melb. **'Phone:** MJ 2011. **Directors:** D. Scott (Chairman), F. H. Daniell (Deputy Chairman), J. L. Mason, H. L. Serrell, J. F. Trevorrow. **Auditors:** Wilson, Danby & Giddy.

1st Year ended June 30, 1953. Meeting October 22, 1953.

Results in the first year as a public company were well in xcess of previous figures disclosed in the Memorandum of Sale. let profit of £34,736 returned 34.6% on capital, from which a 2½% distribution was made.

In addressing the Annual Meeting of shareholders on October 2, the Chairman Mr. Daniel Scott, said:—

The business in which you are now interested as shareholders vas previously conducted as a Private Company. The conversion rom a Private to a Public Company was largely influenced by the ontinued growth of the business, and to some extent by the inci- ence of taxation.

It is a matter of personal gratification to me that the business which I established and which has been expanded and developed as Private Company should have shown in this first year as a Public Company such an eminently satisfactory result from the iew shareholders' point of view.

New Zealand Activities

As disclosed in the Directors' Report, the net profit of the subsidiary companies (practically speaking wholly owned) was £34,738, after providing for income tax, Australian and New Zealand. After allowing for interest of outside shareholders at £1,032, the net profit earned represented approximately 33% of the issued capital of your Company.

The profit resulting from the Company's New Zealand activities must be considered abnormally good, and therefore not taken as an indication of what can be expected in the future from that source.

Since the close of the financial year your Company has acquired another subsidiary, namely Richard Wildridge & Co. Pty. Ltd., which operates in New South Wales and Queensland in dairying equipment and refrigeration.

The terms on which this business has been acquired are considered satisfactory, and it is anticipated that the future earnings of the group should be considerably enhanced from that source.

Profits earned by Richard Wildridge & Co. Pty. Ltd. for its financial year ended April 30, 1953, were £21,679 after tax. As however, these profits form part of the consideration purchased by your Company, they will not be available for dividend. I give this information for the purpose of disclosing the potential earning power of this new subsidiary, which should more than offset any diminution of profits obtained from New Zealand in the future.

It will be noted from a perusal of the Directors' Report that the combined carry forward in the Profit and Loss Appropriation Account of your Company and its subsidiaries increased by £19,061 after payment of the interim dividend of 7% paid on March 31, 1953, and provision for the final dividend and bonus of 3% and 2½% respectively.

Conservative Policy

It will be the aim of your Directors to restrict as far as possible the issued paid up capital of the Company, and adopt a reasonably conservative dividend policy, so that the internal strength of the Company is built up to take care of normal expansion in the business itself and advantage of any other business opportunities which may occur.

In these days of high taxation, it is in the interests of shareholders to finance as far as possible on term borrowings as distinct from fixed capital, and this is the main reason why the Directors decided to make an issue of registered notes. At the present level of taxation for a public company, namely, 7/- in the £, financing by way of notes is much more economical than by way of preference shares. As a matter of fact, the economy amounts to 2.2% of the capital involved. From the point of view of security, the notes are really better than preference shares, as they rank before the whole of the issued capital of the Company, both ordinary and preference.

The interest rate on these notes at 5% was at least 1% below the normal ruling rate for this class of investment, and the fact that it was fully subscribed vindicates the judgment of your Directors in the confidence of shareholders in the future of the Company.

Steel furniture and fittings for office, factory and stores manufactured by the company enjoy a high reputation. In addition, cold-rolled formed metal sections are produced.

Established during the previous year profitable manufacture was achieved by the Queensland subsidiary towards the end of the year, and manufacturing has now been undertaken by a South Australian subsidiary. A second factory is contemplated in Sydney. To facilitate further development, ordinary shareholders were offered 35,000 additional shares after balance date.

At the Annual Meeting of the Company held on October 20, the Chairman, Mr. C. W. Brown, delivered the following address:

The Annual Report brochure and the Accounts now before us show that the organization has had another satisfactory year with consolidated net profits for the year of £42,110 after tax provision.

Your Board decided that the year's results together with the better position of the Company's finances warranted a 2½% bonus being added this year to the final 6% dividend on ordinary shares. This with the 4% interim dividend paid last March makes 12½% on ordinary shares for the year. Healthy growth and sound development requires the retention in the business of substantial net profits and 56% of the consolidated net profits for the year after tax have been left in the business for this purpose, the remainder being paid out as preference and ordinary dividends.

Finance and Shareholders' Funds

A quick summary of the variations in the Consolidated Statement compared with last year is as follows:

Current Assets

Current Assets have risen by £14,297 (i.e. Stocks and sundry debtors).

Fixed Assets

Fixed assets have risen by £66,937. These include the new buildings and new plant and equipment for the Metal Sections Co. totalling £36,360, new plant and equipment for Brisbane £2,302, Adelaide, £4,778, Sydney £7,423 and Clifton Hill £12,471. This latter amount includes over £6,000 for a new 140 h.p. Blackstone Auxiliary power plant and power house for our Clifton Hill works. This was installed in terms of an undertaking given the State Electricity Commission to avoid power cuts in the 1952 winter which would have meant a dead loss of at least £3,000 during that period. It is being held to protect our business against similar emergencies in the future.

Liabilities

Trade and other creditors and tax provisions are approximately £40,000 less whereas Bank Overdrafts increased by £43,470, a new item also appears being a £50,000 loan over eight years from the National Mutual Life. These figures are reflected by the movement of shareholders' funds in the Balance Sheet as at 30/6/53 to £357,345.

Since the balance date and in terms of the circular to shareholders of July 24, 1953, 35,000 £1 ordinary shares (paid up to 5/- have been issued and the £50,000 National Mutual Loan is being increased to £65,000. The balance of calls will be made as the money is needed and the further £15,000 will be advanced by National Mutual before the end of the year. These arrangements will permit the Company's programme to be sensibly and comfortably financed "in the best interests of the business and existing shareholders" as previously advised.

Last year I made reference to the drain on the working capital of our enterprises by the twin evils of inflation and high tax levels. Fortunately a number of steadying factors have occurred since such as, the stabilizing of basic wage adjustments, the greater consistency of local material supplies and the taxation reductions. Our own working force too, has been remarkably stable. Our labour turnover has always been low and this year our Clifton Hill works set a record in this regard. This would appear to indicate that most, if not all, who work with us find this a good place to work.

Steel Supplies

As you will appreciate our organization uses very considerable quantities of steel, and although the previous wide margins between prices of the imported and local steel have steadily lessened during recent years, it is pleasing to note that Australian steel is still the cheapest in the world.

In the Chairman's address at the first Annual Meeting of E. T. Brown Ltd., sixteen years ago on 15/9/1937, I spoke of Australian steel prices and supplies and now quote from the press reports of the Melbourne dailies at the time.

They say inter alia, "Mr. Brown said the world wide shortage of steel naturally tended to force up prices, but too many manufacturers had found that unnecessary price increases frequently acted as a boomerang in subsequent trade. The Directors believed that all progressive minded businesses today sought their additional profit out of increased demand for their goods. He referred to the wise and far-seeing policy of the B.H.P. in greatly assisting in the stimulation of the use of steel by manufacturers by maintaining reasonable prices."

That was long before the introduction of subsequent Government Price Controls, and the long term wisdom of that B.H.P. policy is evidenced by the vast expansion plans now under way with the new plant being installed at Port Kembla and Newcastle to produce greater quantities and better qualities of Australian made steel strip and sheets. Providing that policy is maintained and export markets do not absorb too great a proportion of Australian steel production these developments should be of great future benefit to your organization, particularly against foreign competition, which is at present negligible.

Meanwhile the Australian steel we need is at present far from being in free supply. Consequently with our ever increasing production rate and facilities we are unable to accumulate the substantial tonnages of Australian sheet and strip our business warrants, to take care of temporary shortages or delayed deliveries from the mills. Shipping difficulties and consequent storage congestion at the mills now frequently prevent rollings being shipped to us as needed. This causes unexpected delays and variations to our production schedules. All possible steps, however, are being taken by us to overcome these difficulties by the persistent efforts of our executives responsible for solving these problems.

General

Our business is of the "mass" or "flow" production type. We operate primarily by making and selling mass produced standard parts, by modern production and selling methods. We are able to mass produce products that are better and less costly than those made by slower and more expensive methods. It is however, equally important that we have them available when our customers need them.

National needs today call for increased output with greater economy, because increased productivity alone, makes it possible to raise wages without raising prices. We, like many other healthy units of Australian industry, are assisting toward that objective in a number of ways. We are using better production methods, better machinery and tools eliminating many forms of drudgery by mechanical aids and more machines and tools per worker. We find the proportion of skilled and semi-skilled workers in industry is constantly rising. More and more working operatives are receiving the benefit of better education and training. There are more interested workers who take an active interest in their jobs and make an important contribution to production and selling methods. Give them good leadership that deserves their support and respect and you get good results.

Thus, the future of any business or organization depends on the people in management more than any other one element. Today's mass production techniques would have been impossible under old fashioned management methods. They require a management staff of well trained men, a fast accurate system of control records and reports, and the developing of leadership in supervisory people. We need to keep our organization flexible, lively and effective and we receive sterling support from the many sincere, competent and reliable people who work with us. It is timely therefore, for me to once again express the appreciation of the Directors and shareholders to our management teams and operatives and all concerned for the fruitful efforts that have made possible the further record progress during the year under review.

As reported elsewhere, progress has been well maintained since balancing date and plans recently outlined to give our customers better service are being steadily implemented. I am glad to announce to you that Brownbuilt (N.S.W.) Ltd. has now secured a three acre site at Sutherland, eighteen miles from Sydney on the main highway to Port Kembla, and a manufacturing unit will be built there to supplement the present Ultimo factory production. Further forward moves in Melbourne are also contemplated.

So we look to the future with commonsense, courage and confidence profiting from the past, working in the present and planning for the future. We believe most of our countrymen and our Company are vigorously in earnest. We have our problems, we may be delayed, but our people will work for the best and expect the best as they have done in the past, and go on to greater things together.

Fetter Mills Ltd.

Reg. Office: 1056 Lygon St., Nth. Carlton. **'Phone:** FW 4116. **Directors:** M. Fetter (Chairman and Joint Manag. Director), R. Fetter (Joint Manag. Director), W. G. Hall, A. B. Elvish, L. B. Myer, A. Fetter, J. Spivak. **Auditors:** Fuller, King & Co.

Year ended June 30, 1953. Meeting October 9, 1952.

Sales were a record in quantity and value, and profit improved after last year's decline, returning 9.9% on ordinary capital after taxation provision at pre-budget rates. Dividend was raised from 5% to 7½%.

In addressing shareholders at the Annual Meeting on October 9, the Chairman, Mr. M. Fetter, made the following remarks:

The company has completed a very good year. The company's sales were at a record level in both quantity and value, and with the orders in hand and production planned, we anticipate a continuance of successful trading.

Regarding the loan of £50,000 obtained during the year under review, this is being utilised in making alterations and additions to the company's premises and in the purchase of additional plant from overseas. Some of this plant has already arrived.

It should be noted that our figures for taxation provision were completed before the announcement of reduction in rate of company tax. The reduction will be of great benefit to the company.

Foy & Gibson Ltd.

Retailers and Woollen Manufacturers.

Reg. Office: 130 Smith St., Collingwood, Vic. **'Phone:** JA 4151. **Directors:** Sir Edwin V. Nixon, C.M.G. (Chairman), J. S. Wilson (Deputy Chairman), C. W. P. Amies, F. Grassick, R. J. Macellan, J. B. Arnold, H. L. Brisbane, L. R. Hill, L. E. Williams, P. Howson, G. M. Niall. **Auditors:** C. W. Stirling & Co.

8th Year ended July 31, 1953. Meeting October 28, 1953.

Trading conditions during the year were difficult, and profit receded from £116,070 to £44,073, yielding less than 1% on shareholders' funds. Reduced dividend of 5% was paid from accumulated profits.

*Credited with share premiums (1952, £70,000), and in 1951, with £1,092,780 surplus on realisation of shares in subsidiary.

Profits are derived from three main sources—

(i) Foy and Gibson (Stores) Pty. Ltd., controlling departmental stores in Melbourne, Fitzroy, Prahran, and Adelaide.

(ii) Eagley Mills Pty. Ltd., producing woollens, worsteds, and knitted goods at Collingwood, Victoria.

(iii) Investment income from a large shareholding in Foy & Gibson (W.A.) Ltd. (which has expanded considerably over recent years), and rentals from certain properties not required for trading activities.

In the retail section, sales for the first six months were lower than the corresponding period of the previous year, but trading improved in the second half of the year. Greater use of credit facilities is reflected in debtors which rose by £344,599 to £915,496. Group stocks fell by £244,478.

Due to accumulated stocks held by retailers, Eagley Mills were short of orders for the first six months and production was curtailed. Demand later improved and total sales were greater than in the previous year; however, profit margins were lower and the mills incurred a loss for the year.

Demand generally is now improving and directors are confident of future prospects.

The following address by the Chairman, Sir Edwin Nixon, C.M.G., was circulated to shareholders with the Annual Accounts:—

The Directors' Report, which was circulated with this Review, deals with the accounts of the parent company—Foy & Gibson Limited—and it is these accounts which you will be asked to receive and consider at the Annual General Meeting.

A more comprehensive view of the whole of the Company's interests is presented in the Consolidated Accounts, which summarise those of the Parent Company and the wholly-owned Subsidiaries—namely, Foy & Gibson (Stores) Pty. Limited, Eagley Mills Pty. Limited, Bilson's Pty. Ltd. (of Colac), and Foy & Gibson (London) Limited. My comments refer to these Accounts and to the operations of the group as a whole.

Trading Results

The adverse trading conditions prevailing during the first half of 1952, which I described fully in my Review on the Accounts for last year, continued almost until the end of the year, and affected all departments of our business. Material improvement commenced in December, 1952, and this has since been maintained.

Foy & Gibson (Stores) Pty. Limited

This Company operates our department stores situated a Bourke Street, Melbourne; Chapel Street, Prahran; Smith Stree Collingwood; and Rundle Street, Adelaide.

Although sales for the first six months of the year were lowe than those for the corresponding period of the previous year, th increase during the remainder of the year made good this defici ency, with the result that the sales for the year were approxi mately equal to those of the preceding year, which were a recor in the history of the Company.

Trading conditions, however, were difficult. Although Price Con trol on a wide range of our merchandise was lifted in August 1952, it had by then become unnecessary because of keen com petition. However, the removal of Price Control restored a degre of flexibility of merchandising from which the public benefited The gross profit rate earned this year was slightly higher tha that to which it had fallen during the preceding year, but wa still below that which is considered adequate.

The continuance of import restrictions progressively reduce our stocks and, in consequence, our sales of certain lines, includin

carpets, linoleums and some classes of earthenware, not manufactured locally; these restrictions are gradually being eased, and the ability to obtain stocks of these lines should benefit our sales during the current year.

In recent years the expense of conducting Retail Stores has been increasing steeply, mainly because of automatic quarterly increases in salaries and wages. This year, however, the rate of increase has been rather less than in previous years, partly because salary and wage increases have been relatively smaller and partly because reductions in other expenses have been possible. The results of the second half of the year have been most encouraging, and compare favourably with the normal trading profits of our Stores. The net profit of the Retail Store for the year was substantially higher than that of the preceding year.

I may add that our turnover figures compare very favourably with those of the retail trade generally, as shown in official statistics prepared by the Commonwealth Bank and the Commonwealth Statistician.

A feature of retail trading during this year has been the marked trend from cash to credit sales, and, in this respect, our experience appears to be common to the Trade. There has been a substantial increase in sales to customers on Hire Purchase and Foy's Family Credit Accounts, with the result that the amount owing on these accounts is substantially higher. Full provision has been made to cover any loss that is likely to be sustained on Debtor Accounts.

Eagley Mills Pty. Limited

The results of the Eagley Mills for the year have been disappointing.

When the year began the Mills were passing through a very difficult period. Many retailers and makers-up had large stocks of locally-manufactured and imported materials which had to be cleared before they could place any orders. The demands on the mills, therefore, fell to a very low point. Production had to be reduced and the services of staff dispensed with. A wide variety of lines had to be manufactured in order to keep the mills running, and this reduced profits, and, in some cases, resulted in losses. A substantial volume of defence business was executed, upon which the profit margin was very low.

Towards the end of 1952, however, demand revived, but the loss of trained personnel prevented a speedy resumption of profitable manufacturing activities. However, the sales for the year were slightly in excess of those of the preceding year, although keen competition compelled us to accept less than our normal profit margin on many of our products.

During the year, capital expenditure in Eagley Mills amounted to £197,737. The greater part of this was spent in pursuance of the policy, to which I referred in my review for the year ended July 31, 1951, of re-equipping the Mills with modern plant and machinery, and on the installation of new steam plant. Both boilers have now been completed, and the installation of new plant and machinery is proceeding satisfactorily.

This work, and other alterations to plant lay-out generally, caused some interruption to production during the past twelve months, but beneficial results should be felt in subsequent years.

Perhaps the most encouraging comment that I can make upon the mill results is that the whole of the loss was sustained in the first six months of the financial year. I do not wish to under-rate the seriousness of this loss, but vigorous steps have been taken to ensure that it does not recur, and I do not think that too much importance should be attached to it in considering the future prospects of the Company.

Bilson's Pty. Ltd.

In last year's review, I referred to the fire which occurred on September 19, 1952, in the premises occupied by Bilson's Pty. Ltd. at Colac, and to the plans which were then being prepared to rebuild the destroyed portion. The re-built section will be completed shortly, and will be opened for trading during next month. Plans are also in hand for remodelling the show windows of the undamaged sections of the property, and, when all this work is completed, our store in Colac will compare favourably with any country store in Victoria.

The results for the year were adversely affected by the fire and by the flooding of parts of the Western District, which materially reduced the production and purchasing power of many of our customers. However, these disabilities will shortly pass, and, with the opening of the new store, we look forward to offering the people of Colac and the surrounding districts, shopping facilities and a choice of merchandise comparable with those available in the larger centres.

Foy & Gibson (London) Limited

The function of this subsidiary is to seek out and purchase merchandise for sale in our own Retail Stores and those of Foy & Gibson (W.A.) Limited. Its income is derived almost wholly from buying commission charged on goods purchased on their account.

Import restrictions during the past 12 months have reduced very substantially the only source of income available to the London Buying Office and, although economies were made where possible, a loss was inevitable. As import restrictions are relaxed we shall be able to place larger orders through it.

Other Interests

The item, "Dividends and Income from General Investments," appearing in the Consolidated Profit and Loss Account, consists mainly of rents from properties not required for our own purposes and dividends received from our shareholding in Foy & Gibson (W.A.) Limited. I am pleased to say that the latter has had a very successful year, and, with its country branches, is in a position to benefit from the industrial development of Western Australia.

Consolidated Net Profit and Taxation

The Consolidated net profit for the year, after deducting the losses of Eagley Mills Pty. Limited and Foy & Gibson (London) Limited, and before providing for taxation, amounted to £119,362 compared with £194,182 for the previous year. Out of this it was necessary to make a provision for taxation of £75,289. This provision bears no relation to the consolidated profit, because, in accordance with the provisions of the Income Tax Assessment Act, losses incurred by one subsidiary cannot be offset against the profits of others, but must be recouped out of the profits of future years. The provision for taxation in future years will be reduced when the subsidiaries that have incurred losses in this year return to a profit-earning basis.

Dividends for the Year

Since the Company was converted to a public company in May, 1946, an amount of £611,878 has been retained out of profits to assist in financing the expansion of the business and to enable dividends to be paid in years when results are not satisfactory. Having regard to this and to the improvement in trading conditions now being experienced, the Directors feel justified in recommending payment of the usual final preference dividends and a final ordinary dividend at a reduced rate.

Consolidated Balance Sheet

Comparative figures for the previous year are shown in the Consolidated Balance Sheet, and as the changes are in the main self-explanatory, I shall comment only on the more important of these.

The reduction of £244,478 in stocks on hand has occurred mainly in the stocks of our Retail Stores. In view of this reduction, the Stock Financing Reserve, which was established two years ago when stocks on hand reached a high level, is not now required, and the balance of £75,000 has been transferred to the credit of Profit and Loss Appropriation Account.

The increase in trade and sundry creditors is due to the greater volume of orders which we have been able to place following the reduction of our stocks on hand to a more satisfactory level.

Trade and sundry debtors have increased by £344,599—due mainly to the increased credit sales made in our Retail Stores, to which I have already referred, and to a lesser extent, to the larger sales of Eagley Mills.

Freehold properties have increased by £54,874. This includes the cost of additions and improvements to the buildings occupied by Eagley Mills Pty. Limited and the purchase of a shop property opposite our store at Colac for temporary occupation during the re-building of the fire-damaged portion of that store. The whole of the purchase money for this property is not yet paid, and the unpaid balance is included in the item, "Mortgages and Unpaid Balance of Purchase Money."

During the year, capital expenditure on machinery, plant fixtures and fittings, including that spent in the re-equipment of Eagley Mills, to which I have already referred, aggregated £244,832. Depreciation written-off out of the profits of the year amounted to £56,905, compared with £41,100 last year.

Thanks to Staff

The Executives and Staff of the Company and subsidiaries deserve our thanks for their loyalty and untiring efforts during a most difficult period, and, on behalf of the Board, and, I am sure, the stockholders, I have pleasure in recording appreciation of their service. I should like to include in this, the Manager and Staff of our London Buying Office.

Future Prospects

At this time last year the outlook was uncertain. Heavy stocks were held and the normal flow of trade was restricted. These conditions have now passed; excess stocks have been reduced, people are buying to meet current needs, and the prospects for the coming year are encouraging. I therefore face the immediate future with confidence.

In his address to shareholders at the Annual Meeting on September 28, the Chairman, Mr. H. J. Gibbs, made the following remarks:

In the Annual Report, if capital profit on sales of properties no longer required, namely £4,699, is disregarded, the year's trading, after providing for all charges and taxes, has resulted in a consolidated net profit of £60,505, an increase of £23,002 over the previous year.

I am sure you will agree that such profit is very satisfactory and that figures for the year under review compare favourably with those of the earlier year, especially upon consideration of the following statement regarding sources and application of funds:

Sources of Funds:

Profit for year	£65,204
Borrowing on Mortgage	25,789
Decrease in current assets:	
Cash	3
Debtors	24,330
Stock	17,038
Increase in deposits and advance payments	13,102
	£145,466

Application of Funds:

Increase in freehold land and buildings	£25,787
Increase in plant and machinery	23,041
Increase in investments	62
Decrease in bank overdraft	52,513
Decrease in sundry creditors	17,063
Payment of dividends (including proposed final)	27,000
	£145,466

In recommending a final ordinary dividend of 4 per cent., the Directors feel that the increase of 1 per cent. in the dividend rate is justified by the improved rate of earning.

The increased profit this year is the combined result of succes ful operations of all the Company's subsidiaries and associates Australia and overseas. The New Zealand subsidiary was qui to benefit from its spacious new premises at Penrose, Auckla The new Sydney factory and offices at Mascot were forma opened before a representative gathering on Fifteenth of Octo last, and improved production has resulted from greater facili there.

Trading Conditions

Another factor of importance was the appreciable improveme in supplies of raw materials which permitted profitable expansi of overseas markets. Trading conditions were not easy duri the first half of the year and, until March, substantial increas in operating costs had to be borne without any corresponding i creases in controlled prices being granted. However, a certa amount of relief was obtained in that month and contributed some measure to the results for the year. You will, no dou be surprised to hear that, of all the products of our subsidiari only wire now remains subject to price control, and that cont persists in only three States of the Commonwealth.

Packaging technique is constantly changing. Some chang increase demand for steel strapping, others lessen it. Oth changes, again, cause demand to switch from one size or type strapping to another. Overall, the scope for application of tensio steel strapping continues to broaden, and I see no reason w our business should not continue to expand.

Prospects

The Company faces the future with confidence, and it w interest you to hear that arrangements have recently been ma for essential enlargement of one of the interstate factories. Al a vacant site of 8 acres situated within 8 miles of the G.P.O. h been satisfactorily acquired for future expansion in Melbourne.

Conclusion

Finally, I wish to acknowledge and express my appreciation the continued interest and zeal of the staffs of the Company subsidiaries. That has been a potent factor in achieving t pleasing results for the year under review.

NO NOISE IN THIS BAR.
THE REX HOTEL, Potts Point, built at a cost of £270,000, is the largest and most modern built in Sydney since the war.

C.S.R. Acousti-Tiles can be quickly installed over your present ceiling without interrupting your business.

484 noise-traps in each 12" square tile. As sound waves hit the tiles they are instantly absorbed.

Australia's newest luxury hotel installs sound-absorbing Cane-ite Acousti-Tiles

Licensee of the Rex Hotel, Mr. G. D. Donnelly, makes this statement: "Immediately our big new saloon bar opened to the public we found a serious noise problem on our hands. But we solved what seemed like a serious problem in a couple of days by the installation of Cane-ite Acousti-tiles. Even in rush hours, the noise level now remains low. The staff were quick to comment on the greatly improved hearing comfort now enjoyed."

Your staff will work better . . . your customers will appreciate the restful quiet . . . when you install Cane-ite Acousti-tile ceilings . . . in your hotel, office or factory. On new construction, or the oldest building, they can be quickly, easily installed at exceptionally modest cost.

Design your own floors. 17 different colors in C.S.R. floor tiles can be laid to your own pattern. Special fixtures or counters can be highlighted by the design of the tiles around them. Easy to clean. Last a lifetime.

The following address was given by the Chairman, Sir Robert Knox, to shareholders at the Annual Meeting held on October 14:—

The profit for the year prior to provision for taxation was £67,918/0/8. Income Tax of £23,645/12/- is calculated at rates disclosed by recent Federal Budget. After making such provision and writing off the remaining balance of preliminary expenses of £2,425 the amount available for distribution in the Appropriation Account, inclusive of an amount of £28,770/2/2 brought forward from last year, was £70,617/10/10, from which your Board has declared a dividend of 8% for the year, and carries forward the sum of £42,617/10/10.

Turnover.

The curtailment of Government and semi-Government expenditure during the past year was in part responsible for the reduced profit earned. Such contraction, which was expected and mentioned in last year's Report, extended also to certain Industrial fields, directly reacting on turnover. The current position, however, would appear brighter, and as loan moneys become available, Governments will again continue more actively their developmental programmes. Your Board is constantly examining ways and means of improving your Company's active representation, and engaging in wider fields of activity.

Queensland Subsidiary.

As mentioned in the Directors' Report a small profit was earned by our Queensland subsidiary. It was not expected that this Company would show in its initial stages a large return, but the costs incurred in its establishment have been fully justified by the expa sion of our activities in that State.

Broom & Wade Ltd.

Your Company entered into a new arrangement with Broom Wade Limited, of England, for the handling of that company's equi ment. Previously, stocks were based on consignment, but it w considered more advantageous for both parties to make outrig purchases, the terms of such agreement being mutually satisfacto although such arrangement has caused a substantial increase in yo Company's stock values. We are now on a firm basis to contin building up the pneumatic business of the Company and its alli equipment.

We value greatly our long association with Metal Manufactu Limited, for whom we have handled the distribution of non-ferro tubes throughout the Commonwealth. It is pleasing to report greater appreciation by Public Authorities of the value of the u of copper in water services continues to grow steadily.

Directors and Staff.

Our London Director, Mr. Charles Soutar, will arrive in Au tralia next month and your Board welcomes the opportunity of co sultation with him.

Your Directors wish to express their appreciation to all me bers of the Company's staff, both at Head Office and in the Branch for their keenness and wholehearted co-operation throughout t year.

Golden Plateau N.L.

In addressing shareholders at the Annual Meeting held on November 16, the Chairman, Mr. W. H. Smith, reported as follows:

As you have had the Annual Report and Accounts documents for some little time, I will, with your consent, follow our usual practice of taking them as read, and will confine my remarks to a summary of the more important items in the Balance Sheet and review the more interesting features of the year's operations.

The Balance Sheet presents an even healthier picture than it did last year. Accounts outstanding at the end of last June totalled £4,560 as against £5,873 in 1952. These were covered by current assets of £91,805, a rise of £12,926, most of which was due to a lift of £10,220 in stores and stocks. There was also an increase of £10,090 in Commonwealth Loans. These movements reflect the better results obtained during the year's operations.

Apart from a further increase of £7,364 to our plant and mill equipment, the foregoing represent the major changes.

Production and Costs

The year's output of 23,181 tons of ore for a recovery of 11,384 fine ounces of gold, which yielded a profit of £79,032 is an appreciable improvement on the previous year's results, when 20,486 tons, yielded 9,274 fine ounces for a profit of £64,491.

The principal factors in the achievement of the improved r sults were the larger throughput, a lift in the grade of ore fr 9.05 dwts. a ton, to 10.49 dwts. and also an improvement in t rate of extraction from 89% to 94%.

These factors helped to offset the rise of 10/6 per ton of cos from £4/3/6 last year to £4/14/-, due mainly to the increases duri the year of labour and material costs. This continued rise is, course, common to industry generally, but in view of the fix price of our commodity, gold, it is of particular concern to ou selves and others engaged in the gold-mining industry.

The cost problem is one we are constantly reviewing and whe ever improvements by mechanisation can be effected, this is bei done. Some indication of the seriousness of the cost problem given in the Mine Manager's report, which discloses a 30.8% ri in labour costs and 35% in the price of most of our main ite of stores and spares.

The effect of these increases poses difficult problems and th solution is by no means easy. It is difficult to raise output sharp enough to permit a reduction in overall unit costs, while to pros cute a vigorous search for new ore bodies means additional e pense unless the grade improves, which fortunately for us, happe to be the case. Nevertheless, we are forced to abandon the milli

of appreciable blocks of previously profitable ore and concentrate on the development of new disclosures.

The increase in our development footage from 1,448 in 1951/2 to 2,120 last year is reflected in the overall improvement in our ore reserves position.

Mine Development and Ore Reserves

The exploration and development programme conducted last year was rewarded by several most encouraging occurrences, the chief of which was in the North lode, where large tonnages with higher overall values were opened up on several levels. This formation continues to open up in a promising manner and we have reason to hope that it will continue to do so.

Several other parts of the mine also responded well, including the Sunrise section.

Further proof of the success of our development programme is disclosed in the greatly improved ore position at the end of last year. At the end of the 1951/2 period, our disclosed ore reserves were stated to be 64,200 tons with a gold content of 20,888 fine ounces, an average of 6.5 dwts. per ton. At the end of June, 1953, our proved reserves were reported at 78,100 tons containing 36,275 fine ounces—an average of 9.3 dwts. per ton. In other words, tonnage was increased by some 20% and the gold content by approximately 50%.

That these figures are conservative is shown by the fact that no estimate is given of probable or possible ore, and despite the fact that the figures at June, 1953 were stated at an average of 9.3 dwts. per ton, the actual overall recovery was 10.49 dwts. per ton.

Since the balance date, some further encouraging developments have occurred, but it is too early yet for any definite estimate of their values.

Dividends

As I mentioned at the last annual meeting, the Board was confident of the outcome of the development programme it has instituted and that when it was considered advisable, the dividend position would be reviewed.

The steady improvement in our mine's prospects enabled the Board to raise the dividend from 6d. in 1950/1 year to 1/3 last year. A dividend of 1/- per share has been declared from this half year's profits and we are hopeful that the recent improvement in our ore position will permit a continuation of worthwhile dividend payments.

In conclusion, I would like to ask you to join the Board in expressing our appreciation of the grand work of our Mine Superintendent, Mr. A. B. Clarke, and his staff for the efficient manner in which they have carried out their various duties, and which is so clearly demonstrated by the results of the year's operations, and as disclosed by the report I have just presented to you.

Lifeguard Milk Products Ltd.

Reg. Office: 536 Flinders Lane, Melb. **'Phone:** MB 3904. **Directors:** M. M. Brewer (Chairman), J. R Bishop, G. R. Brewer, L. J. Brown. **Auditors:** Sherlock & Wilson.

Year ended June 30, 1953. Meeting October 16, 1953.

Although turnover and profit of the parent company were higher, keen competition greatly reduced profit of the Singapore subsidiary and consolidated result was £15,979 lower at £54,760. Dividend of 10% was repeated on larger capital.

Originally incorporated in 1915 as Federal Milk Pty. Ltd., the company operates a factory at Bacchus Marsh engaged in the manufacture and canning of sweetened condensed milk. In 1949 a subsidiary was acquired in Singapore to act as distributing agent.

In May, 1953, the company raised £140,000 by the issue of 6% Registered Notes, maturing in 1958. The notes carry the right to convert into ordinary shares at 25/- on payment of 5/- in cash for each share applied for, and also the right to participate in ordinary new issues.

At the same time, £56,632 was raised by an issue of £1 ordinaries to shareholders on a 1-for-4 basis at par, and 2,040 to employees.

In addressing shareholders at the Annual Meeting held on October 16, the Chairman, Mr. M. M. Brewer, made the following remarks:—

With regard to the year's results, both turnover and profit of the parent company show an increase, but in the face of the keen overseas competition referred to in the Director's Report, our subsidiary company has found it necessary to operate on a very narrow margin, with the result that its profit has all but been eliminated. The operating costs of the subsidiary company are under continual review with the object of reducing them to an absolute minimum, and I consider that to have maintained a good turnover under present difficult conditions indicates the established position our products occupy in overseas markets. I am hopeful that in the fullness of time costs of manufacturing in Australia will be competitive with those of European suppliers, and that by keeping the goodwill and custom of our Eastern consumers we will once again earn satisfactory profits from this section of our business.

In recommending that one-half of the dividend be paid from Tax Paid Reserves the Directors have followed the practice of last year, although the recent Budget has allowed a further period for distribution of the tax paid funds.

In the first half of the year I visited Great Britain, the Continent and America on other business, but availed myself of the opportunity of inspecting the latest developments in milk processing plant, and I consider the recent expenditure of £136,000 has equipped the company to produce existing products by the most modern methods. The effect of this modernisation on our cost of production is now becoming apparent at Bacchus Marsh.

Early in 1953, Mr. W. A. Ellis resigned and, in April, Mr. H. B. James joined the company in the capacity of Secretary.

When the new share issue was made in April last, employees had the opportunity of participating, and the Directors were particularly pleased with the response in that the number of applications for 100 lots was in excess of the shares available.

In conclusion, I take this opportunity to thank all members of the staff in Melbourne and at Bacchus Marsh for their loyal assistance and co-operation during the past year.

At the Annual Meeting of the Company held on October 23, the Chairman, Mr. Henry B. Smith, delivered the following address:—

Once again I have the pleasure of submitting for adoption the Sixth Annual Report, and Accounts, of your Company.

Accounts and Taxation

I may observe at the outset that our taxation provision is calculated on the reduced rates announced in the current Budget and consequently there is not such a heavy proportionate charge against profits this year.

The main increase in current assets is in stock which is almost counterbalanced by the similar increase in bank overdraft. Our working capital has slightly improved. I wish to repeat that our stocks are not dormant, but held mainly against firm orders.

Among our fixed assets, which are conservatively valued, there is an increase of about £4,800 in motor vehicles which arises from additions to our fleet to effect economies in transport of fuel and wool.

Transportation

One of the major problems facing Australian exporters is the increase in prime costs forced upon them by legislation, which prevents the fast and economical flow of goods by which I mean the restrictions on road transport, and cost of interstate shipping and rail freights.

Without labouring the immense advantages which would result if we had the freedom of the highways may I simply state that the average cost of transporting greasy wool interstate to our works is approximately 52/- per bale as against 5/- pre-war.

On the other hand we can ship the clean product from our works as far as Hongkong for 62/-, to New Zealand for only 42/-, or right across the world to London or Antwerp for an average of 79/6. So you see that local public transport services survive only at the expense of local industry.

Protection and Freedom

A unique feature of this business, unlike many other Australian industries, is that it has not depended on any form of protection, but thrives under the stimulus of world competition.

That our products and prices are successfully competitive in international markets is shown by the figures before you. We are regularly delivering an increasing quantity of clean wool to a growing number of clients, world-wide, and constantly receiving repeat orders.

Wool, itself, is virtually the only staple commodity which enjoys a free local, and international market, and I believe that the maintenance and preservation of this freedom is valuable and desirable. Wool-growers generally are the only primary producers who have received world market price for their product and unlike Board-controlled products wool production is increasing.

Overseas workers purchase Board-controlled primary produ at much lower prices than the Australian worker. The infla cost to the Australian worker contributes to our high price str ture and benefits overseas labour whilst damaging our own econon

Wool and Synthetics

Last year's record clip together with most accumulated stoc has all been cleared at values which were remarkably stable, a which were satisfactory from practically all points of view. T decline in purchases by the U.S.A. was compensated by an increa in Japanese buying, and demand was constant and strong. agree with other commentators that it was one of the most sou and successful seasons in our history.

I do not share fears of competition from synthetics. Dur the last 30 years the use of both wool and cotton has increa by fully 50%, and wool remains in relatively short supply. Th is only approximately one sheep to every three people throu out the world which on an overall average is in the neighbourh of 1 lb. of wool per person per year. In cool areas 7 lbs. head per year is consumed.

Whilst the development of new synthetics has tended only replace old over this last 30 years, the supply of wool has bar kept up with the demand. It is interesting to recall that the to of synthetics used in the U.S.A., the world's greatest consum in 1952, was slightly less than in 1950.

A paragraph in "Time" of September 14th indicates the trend "Some of the magic is going out of the 'miracle' synthetic fibe particularly those which are supposed to resemble wool. Sales Acrilan are so slow that Chemstrand Corp. has cut output at new $30 million Decatur (Ala.) plant to 17% of capacity, laid all but a handful of workers. Du Pont's Orlon is not selling w either for use in worsted fabrics. Weavers, disillusioned ab the extravagant billings of man-made fibers, are cutting th orders."

Greasy Wool

Having the largest, and most modern and efficient commerc wool scouring and carbonising works in the Southern Hemisphe it is not always realised that we also purchase and merchand greasy wool as such.

However, we believe our operations in this field, whilst not considerable, are capable of further expansion and during current year your Directors are concentrating on developing t important aspect of our activities.

In any case, to keep our mill in full production we require steady intake of up to 2,000 bales of greasy wool per week flowi in.

Wangaratta Branch

Already we buy substantial quantities direct from the grow and in order to further augment this trade, and to provide co

plete service to the man on the land, we have recently opened the first of our country buying stores at Wangaratta.

Here, we buy for spot net cash not only wool, but also all nature of raw furred skins, sheep skins, hides, tallow, etc.

Other Departments

As you already know these latter items, with the addition of wool grease of which we are the largest Australian producers, complete the range of our trading operations and it is pleasing to report that all departments were profitable in the year under review.

The Future

The outlook is encouraging. The new selling season opened on a healthy note and to-day's prices appear to be on a reasonable basis.

Your Company is well staffed with skilled employees who have had long training in the business, and are loyal and competent. I look to the future with confidence.

Georges Limited

Departmental Store.

Reg. Office: 162 Collins St., Melb. **'Phone:** C. 9730. **Directors:** H. A. Pitt, C.M.G., O.B.E. (Chairman), A. J. George (Manag. Director), E. T. Bazeley, M. W. Parker, Miss Reta Findlay. **Auditors:** Rucker, Mackenzie & Gordon.

16th Year ended July 31, 1953. Meeting October 6, 1953.

Although sales were £223,000 lower at £1,541,000, a profit of £51,952 was achieved after last year's loss, and dividend was raised to 12½% after last year's reduction from 10% to 5%.

In his address to shareholders at the Annual Meeting on October 6, the Chairman, Mr. H. A. Pitt, gave the following address:

This has been a year of recuperation. In the previous year a doleful tale had to be told to shareholders, and dividends on ordinary shares had to be halved. Now it is pleasing to record that not only has the earning capacity of the store been restored, but it has become possible to pay a higher dividend than in any recent year.

Sales and Profits.

Although sales for the year were less than those of the previous year by £223,000, reducing the figure to £1,541,000, trading was on a more stable basis. Some shortages developed because of import restrictions, but the excellent efforts of local manufacturers and suppliers, together with subsequent relaxation of controls, enabled our buyers generally to maintain the variety and quality of stocks for which the store is noted.

The net trading profit of £78,305 before tax was a striking recovery, from the previous year's loss of £7,651 and compared favourably with the 1950/51 profit of £79,750. Reduced rates of income tax are reflected in the accounts by relief to the extent of £8,000.

Shareholders will be interested to note the distribution of every £1 of sales made:

Goods have cost	14/2
Expenses, including salaries and superannuation, have amounted to	4/10
Federal income tax has taken	0/4
Reserves have been strengthened by	0/5
Dividends will absorb	0/3
	20/-

The dividend of 12½% payable to ordinary shareholders will represent less than 4¼% on the funds provided by them either by way of original capital or of profits not distributed to them.

Having regard to the depreciation in our currency, it must be realised that 4¼% is an inadequate return on subscriptions and savings. Probably the true return would not exceed 2%. This is but one illustration of the injustice caused by the failure of successive Governments to bring about currency stabilisation. There is at present a healthy movement towards convertibility of currency. Until that has been achieved there is little prospect of stabilisation of prices and little incentive to effect savings, which are necessary for the true progress of a nation.

Taxation.

Taxpayers are appreciative of the recent reduction in taxation, which will have some effect in the reduction of living costs. For example, lower rates of sales tax produced reductions not only in the prices of new purchases, but of stock in hand on which tax had already been paid. These benefits were immediately passed on to customers.

It will be observed that there have been substantial reductions in stock and book debts, which are mainly responsible for the decrease in bank overdraft. Consequently, the working capital of the company has been strengthened.

Departments.

Owing to import restrictions, supplies were not adequate to maintain the Jacqmar Salon for fabrics, and it was converted, temporarily, to the use of the Sportswear Department. This move enabled us to rearrange the Millinery, Rue de la Paix and Fur Departments on the Showroom Floor, enabling them to operate more efficiently. Subject to the progressive relaxation of import restrictions, we are looking forward in the near future to reinstating this important Jacqmar Department.

Conclusion.

The Board would again like to record its thanks to Executives and Staff, all of whom have performed their duties most creditably, and whose willing and able assistance has enabled the company to emerge from its period of difficulty.

To our London Agents, Geo. H. Penney & Co. Ltd., and to our Continental Agents, we are grateful for sustained efforts on our behalf.

In his address to shareholders at the Annual Meeting on October 8, the Chairman, Mr. A. J. C. Bult, made the following remarks:—

The net profit for the year was £24,027 compared with £23,126 for the preceding year. The Directors feel gratified that the profit made justifies a continuance of the ordinary dividend rate, and their recommendation is that there should be distributed to shareholders the sum of £18,500, representing dividends at the rate of 10% per annum to ordinary shareholders, and 7% to preference shareholders. The latter have already received an interim dividend of 3½% which is included in the amount mentioned.

The sum of £5,000 has been transferred to the General Reserve Account, and the amount of £354 income tax short provided in last

year's accounts, has been charged to Appropriation Account. After making these adjustments and allowing for payment of dividends, there is an amount of £17,967 to be carried forward in Appropriation Account as against £17,794 brought in at the commencement of the year.

Balance Sheet.

The Balance Sheet shows the following movements:—

Sundry Debtors at £162,755, show an increase of £38,331.

Stock in trade at £289,163, shows a decrease of £81,290, which is considered satisfactory.

Plant and fixtures at £21,944, show an increase of £1,635.

Total current assets this year at £455,090, show a decrease of £41,795.

Total fixed assets at £129,987, show an increase of £1,668.

Turning to the liabilities:—

Current items at £216,531, have decreased by £43,430.

Secured liabilities represented by mortgages over freehold properties £83,704, show a slight decline of £1,870, as against last year, which is accounted for by progressive payments in reduction made over the year.

Sales and Profits.

Both sales and gross profit were lower than last year, but outgoings largely because of taxation relief, showed a decline as a consequence of which net profit as disclosed by the accounts, is slightly in excess of last year.

Sales for the current year are buoyant, and it is expected that the progressive reduction in sales tax on both sporting and radio goods from 33⅓% down to 12½%, will have a beneficial effect on sales.

Note Issue.

Shareholders will have observed in the press that your Directors propose to issue £50,000 of 6% convertible unsecured notes. The money is required to meet the continuing expansion of the Company's business, and a circular on the subject will be forwarded to the shareholders shortly.

Appreciation.

Before concluding, I desire to express the appreciation of the Board—and I am sure of the shareholders also—to the General Manager and the staff for the very satisfactory manner in which they have carried out their duties and responsibilities during the year.

The following review by the Chairman, Mr. C. A. Daley, was circulated with the Annual Accounts:

As indicated in March when the interim dividend was declared, turnover for the last financial year is lower than the previous year, and this is mainly due to the continued operation of Government import controls, which was forecast in the report of last October. This condition, however, has been offset by the increased operating efficiency which has secured the net profit announced, and is considered very satisfactory for the past trading year. During this year much progress has been made in the development of facilities for increased trading in the future as indicated by movements given hereunder in the various States.

Victoria

A new Branch was opened at 305 Smith Street, Fitzroy, with a shop window frontage of approximately seventy feet which has been operating now for the past six months, and initial results are very encouraging.

N.S.W.

The Sydney Branch at 136 Elizabeth Street has converted an additional floor into one of the largest and most attractive electrical showrooms in Australia. This is opened and has been operating throughout the last three months and is already providing extra turnover.

Queensland

Negotiations were entered into at the commencement of this year to acquire the business and premises of Synchronome Electrical Co. of Australia Pty. Ltd., 195 Elizabeth Street, Brisbane, and during August final negotiations were effected. The purchase of this business and property affords excellent premises for the Queensland Branch, which is located in the heart of the electrical trading centre of Brisbane. Synchronome Electrical Co. is one of the oldest electrical merchandising houses in Queensland and the acquisition of this unit should prove of great benefit in the extension of business in Queensland.

South Australia

The Adelaide branch continues to expand and achieve very satisfactory results. Further improvements have been effected and today this is a most modern branch.

Overseas Representation

During the year Australasian representation has been secured for Oerlikon Engineering Company of Zurich, Switzerland, one of the largest manufacturers of power, generating and transmission equipment in the world, and already much progress has been made in furthering the business interests of this Company in Australia.

The Directors again wish to express their thanks to the shareholders who availed themselves of the opportunity of doing business with the Company, which today stocks a most comprehensive range of industrial and domestic electric equipment.

In the opinion of the Directors the results of the year have not been materially affected by any item of an abnormal character.

Humes Limited

Reg. Office: 114 King St., Melb. **'Phone:** MB 2541. **Directors:** C. N. MacKenzie, O.B.E. (Chairman), The Hon. Alexander J. McLachlan, The Hon. Lewis J. Clifford, Sir William Angliss, K.B., The Rt. Hon. Sir John Latham, G.C.M.G. **Auditors:** Flack & Flack.

33rd Year ended June 30, 1953. Meeting September 30, 1953.

Sales of the parent company were again a record. Consolidated profits show a marked increase, and after meeting preference dividends, the return for ordinary shareholders was 30.4% on capital. Subsequent reduction of taxation will make a further £96,000 available. Dividend was raised to 17½%.

An important factor was the dividend of £87,500 received from Hume Industries (Far East) Ltd., which had deferred paying dividends on ordinary shares since the end of the war in order to liquidate its overdraft.

The group operates 56 factories—39 in Australia, 14 in New Zealand, and three in the Far East—producing the Hume concrete pipe for water supply, sewerage and drainage, and other concrete articles; also steel pipes and fabricated steelwork for public utility and development programmes.

Contracts and work in hand will keep many of the factories fully occupied until June, 1954, and in some cases for a considerable period thereafter.

In his address to shareholders at the Annual Meeting on September 30, the Chairman, Mr. C. N. MacKenzie, made the following remarks:

It is again my pleasure to submit for your approval and adoption Balance Sheet and Accounts, which show that the Hume group of companies is in a very sound and flourishing condition.

Although the Directors' Report for the year covers fairly adequately most of the movements shown in the Statements of Account now before you some elaboration by me might be welcomed, before I formally move their adoption.

The Parent Company—Humes Limited

Shareholders will remember that the former wholly-owned subsidiary, Hume Steel Limited, went into voluntary liquidation on July 1, 1952, when Humes Limited took over its assets and undertaking to carry on the business as what we now term, the Steel Division.

By reason of the inclusion of the assets and operating results of the Steel Division in this year's Statements of Account, the previous year's figures are of no use for comparison purposes, and have not been included in the printed accounts. Next year we shall resume again the practice of showing comparative figures.

Balance Sheet Items

Shareholders' Funds. After giving effect to appropriations made by the Directors, and allowing for final dividends recommended, Shareholders' Funds were increased by £171,979 during the year.

Net Current Assets. Current assets exceeded current liabilities —inclusive of provision for income tax and proposed final dividends —by £698,695, as compared with £441,106 last year. Bank overdraft of £263,092 twelve months ago had, at 30th June last, been converted to a credit balance of £254,212. The Company's finances are obviously in a healthy condition.

Stressed Concrete Pty. Limited. Mention was made in my address to you at the last Annual General Meeting of the interest acquired in Stressed Concrete Pty. Limited, in conjunction with Ready Mixed Concrete Company Limited of Sydney, and Stressed Concrete Design Limited of London, which holds the Empire rights for the Magnel-Blaton methods of prestressing concrete.

The object of this company is to foster the development and encourage the use of prestressed and post-tensioned concrete in civil engineering and building fields in Australia and New Zealand for a variety of purposes, including bridge girders, beams for building construction, and the like. It would design and supervise the erection of prestressed concrete structures, supply parts and equipment for prestressing, and act as consultant in all types of work within the field.

The potential for this industry, which has already come into its own overseas, is considered good, although little has been done with it to date in our country. A representative of Stressed Concrete Pty. Limited is engaged full time in seeking and following up enquiries, and supplying information and data concerning the use of prestressed concrete for various purposes.

Your Company's investment in the venture is £5,000, which is represented in the Balance Sheet under the heading "Shares—Other Companies."

Asbestos Mine—Southern Rhodesia. Information has been given you in previous reports concerning this investment. However, some recapitulation and elaboration might be of interest.

Originally an option was secured by the Company and Goliath Portland Cement Company Limited jointly over a number of asbestos mining claims in Southern Rhodesia. The purpose was to obtain asbestos fibre to supplement supplies required, in the Company's case, by its subsidiary, Hume Industries (Far East) Limited, and by Goliath Portland Cement Company Limited for its Tasmanian factory. Both companies are engaged in the manufacture of asbestos-cement sheets and other asbestos-cement goods, and consume substantial quantities of fibre. At that time adequate supplies were highly priced and difficult to obtain.

By June 30, 1952, prospecting, drilling and development work had proved that the blocks on offer contained asbestos-bearing ore of good quality and to a considerable depth, and that, in fact, we had secured an option over a mine of great potential value, capable of being operated on a big scale. It was decided, therefore, to exercise the option to purchase. The intention was to capitalize the mine by public flotation in South Africa, to enable full-scale operations to be entered into.

Before these plans materialised the financial situation in South Africa deteriorated rapidly, following political uncertainties in the Union. The stock market slumped, and it thus became unwise to attempt a public flotation. At about the same time there was a considerable easing in the world demand for asbestos products. There is little doubt that the demand for asbestos fibre for sheet making and other purposes will revive. In the meantime we are mining and milling on a small scale sufficient to enable the mine to virtually pay its way, until the time again becomes opportune for seeking additional capital to operate on a larger scale.

Your Directors are of opinion that the asset is of quite considerable value.

Profits. A net profit of £475,450 for the year, after provision for income tax, was probably beyond the expectations of most shareholders. It is, of course, an extremely good result. The comparable figure for the previous year was £271,309, being the sum of the profits of Humes Limited and Hume Steel Limited. Income tax was provided for at pre-budget rates, and thus will be some £96,000 in excess of requirements. This taxation relief will help the Company to proceed with its plans for development and expansion, so that it will be able to give still further service to the community, and to employ more Australian workmen.

An important factor in the increased profits is the dividend totalling £87,500 received on the holding of 700,000 ordinary shares in Hume Industries (Far East) Limited. This subsidiary is operating very successfully in Malaya and, thanks to the patience of the parent Company over past years in withholding demands for dividend, has reached a state of sound financial stability, and should be able to maintain a satisfactory dividend policy.

As stated in the Directors' Report the increase in trading profits in Australia was the result of good operating conditions—few labour problems and improved supplies of raw material and power. These conditions in turn facilitated increased production giving a smoother, uninterrupted flow of work through most factories. They allowed, also, additional shifts and overtime to be worked. There was in general no lack of orders and contracts upon which to operate. Although both concrete and steel divisions had increased sales, the improvement was more pronounced in the steel division.

Appropriations of Profits. Although there has been charged against the year's profits depreciation in excess of that allowed for income tax purposes, your Directors deemed it desirable to appropriate a further £100,000 to provide against the present high costs of replacement of existing plant and equipment. Depreciation rates in the past have not been adequate to bridge the gap between original cost and today's replacement costs.

In declaring interim dividends in March last your Directors decided to take full advantage of the opportunity for a larger distribution to ordinary shareholders afforded by the payment by Hume Industries (Far East) Limited of its first dividend since the Japanese occupation of Malaya of 5 per cent. on its ordinary shares. Therefore, in addition to the normal dividend of 5 per cent., a special dividend of 2 per cent. on the Company's ordinary shares was declared. This special dividend absorbed £33,500 of the amount of £35,000 received from the Singapore subsidiary in September, 1952.

The usual interim dividend of 3¾ per cent. on the "A" and "B" 7½ per cent. cumulative preference shares was paid.

After taking into consideration the good liquid position of the Company, as disclosed in the Balance Sheet now before you, the increased earnings during the past year, and the final dividend of 7½ per cent. received in March last on the holding of 700,000 ordinary shares in Hume Industries (Far East) Limited, your Directors recommend for your approval at this meeting an increased final dividend on the Company's ordinary shares for the year ended June 30, 1953.

Consolidated Accounts

The consolidated accounts of Humes Limited and its subsidiaries are submitted also for your approval. In these accounts we have been able to show the previous year's figures for comparison. A substantial increase in the earnings of the group will be noted—net profit, after income tax provision, being £625,860, as compared with £527,106 for the previous year.

Shareholders' funds have increased from £3,418,213 to £3,822,312 with the result that reserves and accumulated profits, used in the business of the Company and its subsidiaries are approaching closely the amount of the subscribed share capital. The asset backings of the shares issued by the parent Company are as follows:—

"A" preference shares	£33 19 6
"B" preference shares	£14 16 9
Ordinary shares	£2 1 4

It will be noted also that the current assets of the group exceed its current liabilities by £1,704,801.

Subsidiary Companies

Hume Industries (Far East) Limited

The last available accounts of this subsidiary are in respect of the year ended December 31, 1952. The Balance Sheet showed the Company to be in a very sound and satisfactory position. Also, net profit after tax, at A£229,967 showed an increase of A£25,758 over the previous year's record result. From the profits earned dividends of 12½ per cent. were paid on the ordinary and on the 5 per cent. cumulative participating preference shares.

During the current year profits have been maintained at approximately the previous year's level. Orders and contracts in hand are satisfactory, but the low prices now ruling for rubber and tin, on which Malaya's revenue so largely depends, could have a temporary adverse effect on sales, until readjustments of the economies of Singapore and nearby territories take place.

Some expansion of operations of this subsidiary is planned for the near future.

Hume Industries (N.Z.) Limited

This New Zealand subsidiary showed a decline in its earnings, as compared with the previous year. Trading conditions during most of the period were not as good as formerly, owing to tightness of funds causing a sharp reduction in the amount available for spending by Government Departments and local bodies. It is expected that the current year will show some improvement.

The net profit for the year ended June 30, 1953, was NZ£30,329, after providing NZ£36,500 for income tax, as compared with NZ£52,616, after NZ£56,000 tax, for the previous year.

Activities and Prospects

You have been informed previously that the Company operates 39 factories in Australia. Most factories were working to capacity throughout the past year. The following are some of the more important contracts upon which the Company was engaged. Many of them are still in progress—

High pressure pipes including penstock pipes for the Snowy Mountains Hydro-Electric Authority undertaking at Guthega, New South Wales, and the Tungatinah Power Station in Tasmania.

Water supply pipelines—Mannum to Adelaide, South Australia; White Hills to Bell Bay, Tasmania, for Australian Aluminium Production Commission; and water mains for Brisbane, Cairns and Townsville in Queensland; Newcastle, New South Wales; Collie, Kwinana and various inland lines constructed by Goldfields Water Supply in Western Australia.

Oil storage tanks and pipes for cooling water lines for the oil refinery being erected at Kwinana, Western Australia; also cooling water pipelines for refineries at Kurnell, New South Wales and Corio, Victoria.

Pipes for various country sewerage schemes and for irrigation works at Loxton, South Australia; Coomealla and Dareton, New South Wales and Robinvale, Victoria.

Contracts and work in hand will keep many of the Company's factories fully occupied for the remainder of the current financial year, and in some cases for a considerable period thereafter.

Many big projects which should provide further business for the Company are awaiting the availability of necessary funds before they can be commenced. Shortage of funds is having its effect also on local boards and authorities, causing deferment of water, sewerage and drainage schemes, and similar works, and indeed, is limiting purchases of requirements for maintenance purposes.

It seems to me apparent, however, that conditions in these respects are improving gradually, and that they will continue to do so during the coming months. We appear to be entering into a period of greater stability. A reasonably good season with exports of primary products seems assured. Our overseas reserves have improved remarkably. Past restrictions on trading operations are being lifted gradually. The substantial relief recently granted in direct and indirect taxation must have the effect of giving a bigger incentive to more production, thereby increasing earnings and savings, though reducing costs. All these things should bring about improved trading conditions, and greater general prosperity for some time ahead. An increased confidence should result in public money from additional savings, together with the release of savings previously locked up, becoming available more freely for subscription to Government and local body loans, thus enabling some extension of works programmes.

So far as your Company and its subsidiaries are concerned, all are engaged in important essential industries. All major contracts are secured as a result of public tenders called, and the Hume group is well equipped to tender competitively. Hume products generally are well and favourably known, and sell readily. Shareholders, therefore, would seem justified in regarding the future of their Company optimistically.

Staff

In conclusion I again express, on behalf of the Board, its satisfaction with the good and harmonious relationship, so much in evidence throughout the Company, between management and employees. This is an important factor in the well-being of the Company and all connected with it. The sincere thanks and congratulations of the Board go to the executive, staff and employees for the results achieved after another year of splendid service.

Holdenson & Nielson (Products) Limited

The operating subsidiary conducts an old-established business which is the largest of its kind in Victoria. It manufactures and markets butter, cheese and milk products such as roller processed milk powder, casein, etc. Ice is also manufactured in several country centres and ice cream at Wodonga.

Factories at Numurkah and Moyhu are now under construction, and completion is expected in mid-1954.

Nominal capital has been raised by £500,000 to £1,000,000.

Net tangible asset backing (book values in consolidated balance-sheet)—£1 pref., £8/17/7; 10/- ord., 12/-.

In addressing the Annual Meeting of shareholders on October 23, the Chairman, Mr. R. Holdenson, said:

The accounts submitted reveal a consolidated net profit of £35,076, after taxation provision of £30,263, and depreciation provision of £26,280. The net profit earnings show an increase of £6,288, in comparison with the previous year, and, as pointed out in the Directors' Report, was struck after provision for taxation at pre-budget rates. Consequently, the taxation provision has been substantially over-provided to the extent of more than £5,000, which, naturally, will be to the benefit of the current year. Taking everything into consideration, I consider the net result to be very satisfactory indeed.

The Consolidated Balance Sheet shows that fixed and current assets at £991,576 compare with £891,296 last year, an increase of £100,280, which indicates the necessity for extra working capital in business these days, a matter I intend to deal with more fully later in my address.

Subsidiary Company

I will now make reference to and enlarge on some of the main items concerned with the subsidiary company referred to in the Directors' Report. The intake of milk and cream for the year under review shows a small increase of 5% in comparison with the previous year, but the total turnover, including general trading, was considerably higher at £4,124,870, an increase of nearly 15%, and resulting in an increase of consolidated gross profit of £32,677. It will be noted, however, that the increase in gross profit was substantially absorbed by an overall increase in costs. During the year wages alone increased by approximately 10%, and a corresponding increase in pay roll tax.

High Manufacturing Costs

This upward trend in manufacturing costs is viewed with great concern by your Directors, and every effort has been, and is still being made, to combat this menace by mechanizing plant to the full extent. Whilst the action taken has helped considerably, it is impossible to fully cope with the constantly increasing trend in costs, which is general in all industries throughout the Commonwealth. Changes in plant and production methods cannot cope with the constant increases in the effective hourly wage and indirect taxes, such as pay roll tax, etc., plus now the provision for long service leave, which must inevitably mean increased costs and prices. The result is that in Australia many goods are being produced at too high a cost, thereby pricing themselves out of overseas markets.

This could well apply to the dairying industry, as competition on overseas markets is becoming increasingly intense for various milk products. The Commonwealth Government, in its recent budget, has given some relief to companies and individuals by reductions in personal and company tax rates, but these alone will not solve the problem of high manufacturing costs in our competition with overseas countries, and it is essential to increase our capacity to meet competition by producing goods at a lower cost. This need not mean a lowering of standards, but it does mean increased efficiency on the part of both the employee and the employer; the employee must give of his best, and the employer must check his own efficiency, making sure that his factory is running at maximum economy. In the case of your own Company, large capital expenditure has been incurred in acquiring additional modern plant to increase factory efficiency. This programme, I am pleased to report, has given good results, not only by savings in handling and man hours, but also in further improvement in the quality of our products. For example, six (6) prizes were won by the Company in the Butter Section at the 1953 Royal Agricultural Show. Included in these prizes was the Championship Prize for the best butter exhibited among all sections at the Show. Great improvement in quality has also been made with our other products, such as cheese, milk powder, casein, etc. High quality is essential, both on the home and overseas markets, especially now that competition has become more intense. Your Directors are fully alive to this position, and no efforts are being spared for continuance of the production of the highest quality goods.

In my previous reports, mention has been made regarding our policy of providing service to our many clients by increased trading in general merchandise. The turnover for this department again shows a substantial increase, being nearly 20% higher than that of the previous year, and it is confidently expected that this expansion will continue when various new lines are brought to the notice of our clients.

Veterinary Service

The Veterinary Service is continuing to be of great value to farmers, although a small financial loss was again incurred by the Company for the year. I feel, however, that this loss might easily be viewed as a hidden gain, when the value, from an animal health point of view, is taken into consideration.

In conjunction with the Veterinary Service, a Veterinary Sales Division has been established, with the object of making available, at competitive prices, to all Veterinary Surgeons and others interested, various stock remedies, drugs, etc. I feel confident that this new division will ultimately grow into quite a profitable undertaking and, in addition, will reduce the cost of drugs and medicines used in our own Veterinary Service, owing to bulk buying at larger discounts.

I have already dealt with the production of the subsidiary company for the year under review, and would now like to report on the production for the first quarter of the current year. Due to unfavourable weather conditions experienced in most districts during late Winter and early Spring, the total intake of milk and cream was rather backward for the three (3) months ended September in comparison with the same period of last year, but I

am pleased to report that, with recent favourable weather, production is rapidly improving in most districts, and, from present indications, it would appear that a good season is now assured.

New Milk Factories

I would like to inform you of the progress made with the new milk factories at Numurkah and Moyhu.

At Numurkah, building operations commenced early this year on a site adjoining the present butter factory. The new building is now nearing completion, being designed to handle approximately 20,000 gallons of milk daily. The latest spray drying plant is on order, and it is hoped that the complete plant will have been installed in time to commence operations by April of next year. Roller dryers will also be provided to dry the butter-milk from our adjoining butter factory. Your Board has great confidence in the future of this district, owing to the remarkable progress made in milk production throughout the Soldier Settlement Irrigation area, which is in close proximity to Numurkah.

At Moyhu, building operations have commenced, and it is expected that the factory will be in operation by about the middle of next year. The manufacture of roller milk powder and casein is the present objective, but provision has been made for extension to other milk products, if warranted in the future.

Capital Requirements

I now wish to draw shareholders' attention to the special business referred to in the Notice of Meeting, in which is contained the resolutions recommended by your Board, which I intend to propose at the appropriate time for your consideration. In effect, the resolutions referred to are necessary to alter and amend the Memorandum and Articles of Association to provide for an increase in the authorized capital of the Company from £500,000 to £1,000,000. In the Directors' Report it was pointed out that, owing to the large increase in turnover and higher manufacturing costs, it is felt that the necessary machinery should now be provided to meet future developments, although there is no intention to issue further shares at present. I would like to enlarge on this statement by referring you back to my earlier remarks regarding building operations at Numurkah and Moyhu, when I advised you that we were hopeful of having both factories in operation by the middle of next year. When this programme is completed and the new plant now on order installed and paid for, it will be necessary for the Directors to review the financial requirements of the Company, and, it may then be considered advisable, to obtain further working capital by the issue of shares, or by other means. I feel shareholders will readily agree that the Board's recommendation is in the interests of the Company.

H. B. Dickie Limited

Cotton Spinners and Towel Manufacturers.

Reg. Office: 51 Queen St., Melb. **'Phone:** MB 1686. **Directors:** P. J. W. Danby (Chairman), F. G. L. Harding (Deputy Chairman), Sir Sydney Snow, F. G. Hyett, T. C. Trumble. **Auditors:** G. I. Stevenson & Co.

19th Year ended June 30, 1953. Meeting September 25, 1953.

Labour shortages were overcome during the year, and production rose both in the Spinning and Weaving Mills. Profit was £13,000 higher at £36,875 and ordinary dividend was raised from 6% to 9%.

To date, the Company has not experienced any difficulty in disposing of its increased production; the forward order position is healthy; and unless there is a flood of imports from overseas, your Board has no apprehension concerning the future operations, stated the Acting Chairman, Mr. F. G. Harding at the Annual Meeting held on September 25. His address reads:

The Chairman, Mr. P. J. W. Danby, being out of the State, has asked me to convey to the meeting his apologies for his non-attendance.

Profits

The profit result as disclosed by the accounts for the year was £37,269, after providing depreciation £13,621 at the usual rates applied in previous years and taxation £37,200 at rates applicable to the 1951-52 year. The proposed reduction in company taxation as announced by the Federal Treasurer in his Budget Speech will mean a reduction in tax liability in respect of the year's profit of approximately £8,000, so that the true net profit for the year is approximately £45,269. The comparative result of the previous year was a net profit of £24,245, after providing £13,381 for depreciation and charging £25,000 for taxation.

Production and Markets

In the address to shareholders at the last Annual Meeting, it was stated that the company had increased its production due to an easing of the labour position. It is a matter of satisfaction to know that during the year just past the position in this regard was further alleviated and the material improvement in net profit earnings is due primarily to increased production in both the Spinning and Weaving sections of the Company's Mill.

To date, the Company has not experienced any difficulty in disposing of its increased production; the forward order position is healthy; and unless there is a flood of imports from overseas, your Board has no apprehension concerning the future operations.

It has been decided to install additional machinery in the Spinning and Dyeing sections of the business, for the purpose of expansion and improvement in these respective activities.

Note Issue

It is proposed to finance the capital expenditure involved by an Issue of £75,770 of 6% Unsecured Notes, which, by the way, is a misnomer, because the Notes have a better backing than the Preference Capital. However, the title, "Unsecured Notes" has been laid down by the Stock Exchange as a prerequisite to listing, and your Board has no alternative but to comply with this requirement. Full particulars of this Note Issue will be given to shareholders by means of circular to be issued on the 9th October. Priority will be given to ordinary shareholders to take up the issue in the ratio of one Note of £1 for each four Ordinary Shares of £1 held on that date. The transfer books for the purpose of the issue will close at 5 p.m. on the 8th October and will remain closed until 5 p.m. on the 9th October. However, all shareholders, both Ordinary and Preference, may apply for an allotment in the Issue. Your Directors recommend shareholders to take advantage of the opportunity to participate in this issue of Unsecured Notes, with attached rights.

No decision has yet been made concerning the projected major extensions at Nunawading.

Dividend

In view of the improved result, your Board is pleased to recommend an increase in the rate of dividend on the Ordinary Shares for the year.

Jaques Bros. Limited

Manufacturers of Stone Crushing Equipment and Excavating Machinery.

Reg. Office: Cr. Griffiths & Palmer Sts., Richmond, Vic. **'Phone:** JB 4231. **Directors:** L. E. Jaques (Chairman), L. J. Oakley (Manag. Director), F. M. Reidy, J. A. Holinger, J. S. Robertson. **Auditors:** E. V. Nixon & Partners.

5th Year ended June 30, 1953. Meeting September 29, 1953.

Profit increased for the fourth successive year. The latest increase is £10,217 to £64,973. Ordinary dividend of 12½% was repeated on increased capital, and was more than twice covered by available profits.

The following report by the Chairman of Directors, Mr. L. E. Jaques, was circulated to shareholders with the Annual Accounts:

Accounts for the year ended June 30, 1953, reflect the continued steady growth of the company, which has resulted in a record year, both as regards equipment produced and the profits earned.

The Profit and Loss Account for the twelve months shows a net profit, after making provisioin for taxation, of £64,973, and compares more than favourably with the net profit for previous years—1951/52, £54,768; 1950/51, £39,38?; 1949/50, £37,985; and 1948/49, £30,004.

You will see, set out in the Profit and Loss Appropriation Account, that the profit (before tax) for the year was £124,318, that provision for income tax amounted to £59,345, dividends for the year are £32,313, and flotation expenses written off are £2,137, leaving a balance of unappropriated profits of £30,523, which has been carried forward to next year.

The results of the year's operations as disclosed in the Profit and Loss Account have not, in the opinion of the Directors, been materially affected by items of an abnormal character.

Balance Sheet.

The Balance Sheet figures at June 30, 1953, show that the company is in a sound financial position. Current assets appear at £439,636 and current liabilities are £137,190, so that the working capital of the company is £302,446, which means that for each £1 of current liabilities there were current assets equal to £3/4/1.

Total reserves have moved up to £320,579 comprising Capital Reserves of £180,996 and Revenue Reserves of £139,583 and, at this figure, are £59,079 in excess of the Paid-up Capital of the company.

Asset backing for each 10/- ordinary share is £1/2/6.

Your company has now been operating for seventy years, having been established by Mr. Edward Jaques in 1883, but only during the past five years have the company's shares been quoted on a prescribed Stock Exchange. For your information, a chart has been included in this report showing the steady expansiion of the company's sales and profits earned over the past five years. You will see in the chart that the year 1948/49 is taken as the basic year and that, over the past five years, sales have steadily increased and that, at the end of the current year the expansion was 98%. Over the same period, the profits earned have also steadily expanded so that, at the end of this year, profits had increased by 116%.

Manufacture.

The demand for all products manufactured by the company continues to be very active and, although we, in common with most similar companies, have had orders cancelled by various Australian Government Departments, due to the contraction of Government expenditure on capital works, new orders received have been adequate to keep the company's plant operating to capaciity. The actual volume of contracts now in hand is sufficient to keep all departments of the company's plant working at full capacity for a very extended period.

Output for the past year shows an improvement of 13% over that of the previous year. Stocks of raw material and work in progress have been valued at the lower of cost or market value and, at £341,942, show an increase of £33,430 for the year.

Richmond Factory.

During the year the plant has been maintained in first-class order and new equipment to the value of £7,187 has been installed. Substantial new plant orders have been placed, both locally and overseas, to ensure that our manufacturing methods are kept in line with modern practice abroad.

Depreciation written off the existing plant and buildings during the year totalled £8,172.

Clayton Factory.

This new factory is nearing completion and production is expected to commence at Clayton during October, 1953. Capital expenditure on the Clayton factory to June 30, 1953, totalled £71,741, of which total an amount of £63,254 was expended during the current year.

New Products.

In accordance with your company's policy of steady expansion, new products as dictated by the requirements of Australian industry are under constant review, and as we have at our call the very considerable technical and practical resources of our two U.S.A. affiliated companies, namely, the Traylor Engineering and Manufacturing Company of Allentown, Pa., who manufacture stone crushers and allied equipment, and The Thew Shovel Company of Lorain, Ohio, who manufacture "Lorain" excavators and "Moto-Cranes," we are able to obtain details of the most modern and up-to-date equipment of its kind in the world today.

The practical value of these affiliations is shown by the fact that, during the year, we were able to introduce to the Australian market a "Moto-Crane" capable of lifting twelve tons which, we believe, is the first of its kind manufactured in Australia and which, we also believe, will sell readily in this country. This machine is illustrated in this report and you will see that it is of substantial proportions.

Dividends.

Your Directors are recommending the payment of a final dividend of 7½% on ordinary shares which makes total distributions, on these shares, 12½% for the year. The final dividend on ordinary shares absorbs £19,238, the 5% interim dividend paid on February 28, 1953, amounted to £12,825 and the dividend on 5% preference shares is £250, so that total dividends in respect of the current year are £32,313.

New Capital.

During the early part of the year you will recall a new issue of 85,500 10/- ordinary shares was made at a premium of 5/- per share. This issue increased the Paid-up Capital of the company by £42,750 and expanded the Share Premium Reserve by £21,375.

These additional funds were required to finance, in part, the building of the new factory at Clayton and, at that time, your

Directors advised you that a further similar share issue would be made later in the year. Your Directors subsequently decided, however, that the balance of the finance required for the projected capital expenditure could be provided from the working capital of the company without inconvenience to the company's financial position, and this method of finance was adopted. There has been no alteration to the company's expansion plan.

Relationship with Employees.

It is again our privilege to refer to the excellent relationship which exists between management and employees of the company. Many of our employees are shareholders in the company and all employees share in the payments made under the company's profit sharing scheme. There is a spirit of willing co-operation and common interest which has contributed, in no small measure, to the excellent results achieved during the year, and there is also that personal interest which is so necessary for efficiency.

Future Prospects.

The outlook for the coming year is good, as we have a substantial backlog of orders on hand which have not been affected by the contraction of governmental spending and which ensures that all departments of the company's plant will be operating at full capacity for the coming year.

H. B. Selby Australia Limited

Importers and Distributors of Scientific Equipment.

Reg. Office: 393 Swanston St., Melb. **'Phone:** FJ 3661. **Directors:** E. J. Selby (Chairman), Mrs. A. H. Selby, B. A. Selby, J. T. Pollard, E. M. Harris. **Auditors:** Cooper Bros., Way & Hardie.

5th Year ended June 30, 1953. Meeting October 13, 1953.

Turnover was again a record, and profit rose by almost £10,000 to £34,223, taxation at reduced rates being almost the same as last year's provision. Dividend was raised from 8% to 9%.

The following report by the Chairman, Mr. E. J. Selby, was circulated to shareholders with the Annual Accounts:—

Profit and Loss Account.—Although we have felt the impact of increases of certain operating costs, particularly wages and salaries, it is gratifying to report that these appear to be levelling out and through careful control on the part of those executives responsible, some Profit and Loss expenses have been reduced. In addition, the recently announced reduction in Company taxation rates has been of assistance. Our Perth Branch, having borne initial establishment expenses last year, has contributed to this year's satisfactory results.

Dividend.—Your Directors declared an interim dividend of 3% for the half year ended December 31, 1952. This was paid on April 10, 1953, and they have now declared, payable on October 30, a final dividend of 6%.

I am gratified that our position is such that your Directors feel they can prudently pay these rates of dividend.

Sales.—Turnover, after receding for the first six months, recovered strongly and in both operating companies has once again reached record figures. This has been considerably assisted by the excellent sales figures of both our Brisbane Branch and the newly established Perth Branch.

Our sincere congratulations and thanks are conveyed to the executive personnel and all members of our staffs, whose efforts and enthusiasm have made this possible, despite the fact that import restrictions and the cessation of buying by many of our largest manufacturing companies have made trading exceedingly difficult at times.

Since balancing date, sales have continued to increase and we have every reason to believe that a considerable amount of the uncertainty which reduced the sales of consumer goods, with a corresponding reduction in manufacturing activities, has now disappeared. It would also appear that certain large companies who were operating on their reserve stocks of scientific apparatus and analytical chemicals, have now reached the stage where they are about to recommence regular buying.

Stock.—Although our total stock figure has decreased considerably and in some cases we have experienced difficulty in maintaining adequate supplies because of an insufficient import quota, a factor which has certainly had an adverse bearing on our sales, the position is improving rapidly and we are confident that we will be able to meet the demand during the current year.

Branches.—It is very pleasing to observe the continued progress of our Brisbane Branch whilst that in Perth, although not yet fully established and still operating under great difficulties, has shown every indication of also becoming a most profitable venture. The managers of these branches, who, by their untiring efforts, ably assisted by enthusiastic and keen staffs, have promoted our sales in their respective States, are deserving of high praise.

I mentioned last year that we had purchased a property in Adelaide and I am now able to say that alterations and repairs to these premises are nearly complete. The appointment of a manager and the provision of stocks are well in hand, and it is anticipated that operations will commence at an early date.

Trading Conditions Today.—Your Directors are still of the opinion that much of the slackening of activities seen during 1952, and to a smaller extent in 1953, was or is due to unnecessary alarm and despondency. Some sections of Industry have suffered a severe recession but we consider that, to a large extent, this has been caused by over optimistic expansion, bad planning and the production, at an uneconomic figure, of definitely inferior goods. The public will not buy an inferior Australian made product when a better imported article is available at a lower price.

It may happen that the activities of certain industries in Australia will be severely restricted in the future, with a correspondingly smaller demand for the articles we sell, but to offset this, there is still not only a continuing expansion of industry generally but an ever-increasing amount of scientific control being introduced into sound existing industries and new large-scale Government projects.

Accordingly, your Directors look to the future with confidence, as is evidenced by the rapid development of their policy of making our activities Australia-wide.

Staff.—My Colleagues and I feel that you would wish to associate with us in paying tribute to the loyal services of the executives and staff of all our subsidiaries and to this company's secretary. The fact that we are able to table such excellent figures after a most difficult year, is in no small measure due to their efforts.

The Company's Customers and Suppliers.—In conclusion I express our thanks for the friendship of our many customers and the close co-operation of our suppliers. The import restrictions have severely inconvenienced some of our customers and we do appreciate their understanding and forbearance.

Kia-Ora Industries Limited

Food Processors, Bottlers and Canners, Manufacturers of Fibre Board and Corrugated Packaging, Paper Cups, Etc.

Reg. Office: 201 High St., Prahran, Vic. **'Phone:** LA 1451. **Directors:** J. L. Dixon (Chairman), E. F. Fauser (Manag. Director), R. F. Bland, H. Holmes, A. Mayor, K. R. Green, L. J. Richardson. **Auditors:** Davey, Garcia & J. G. Davis.

44th Year ended June 30, 1953. Meeting October 12, 1953.

Domestic sales, lower than in the preceding year, were supplemented by higher export sales. Competition necessitated price reductions. Profits were £9,785 lower at £62,921. After meeting the dividend on increased preference capital, profit for ordinaries was 13.2%, giving ample cover for the unchanged ordinary dividend of 7½%.

The following report by the Chairman, Mr. J. L. Dixon, was circulated to shareholders with the Annual Accounts:—

The year just ended was the most competitive experienced by the Food Industry in both domestic and export markets during the last decade. It resulted in easing of prices at all levels of distribution from manufacturer to consumer, in spite of continuing national cost inflation.

The main contributing factor in the easing of prices was the liquidating of excessive inventories by manufacturers, wholesalers and retailers. This "levelling off" process was the first step in a return to normal trading conditions where the law of supply and demand determines price levels.

Domestic Sales

Factory sales were lower than in the preceding year when we recorded the largest volume in the history of our Company. This is a reflection of lower list prices, and a lower level of inventories held by wholesalers and retailers. This is confirmed by the independent Market Research Service to which your Company subscribes. These research data also show that your Company has increased its share of the total available market in the products which it manufactures.

Export Sales

Despite a reduction in our list prices, which was essential to meet rapidly increasing competition, export sales were larger than the previous year.

During the year negotiations were completed to market Kia-ora Tomato Soup in the United Kingdom. Distribution, sales and advertising of the product are being handled by one of the most successful companies in its field in England. Large scale advertising in the leading London dailies on Kia-ora double strength tomato soup will be in full swing as this report reaches you.

The press campaign directed to the consumer will be supported by a progressive merchandising and selling programme in food stores throughout the United Kingdom.

This new venture in the export field embodies the two essentials in a successful marketing programme. One—a strong selling organisation to get distribution in food outlets; the other—a consistent advertising and merchandising campaign to sell the Kia-ora brand to the consumer.

Profits and Profit Appropriations

Consolidated net profit, after provision for income tax and depreciation, was £62,921. This compares with £72,706 earned in the previous year. The reduction in profit is a reflection of lower list prices and increased wage costs which are beyond the control of your Management.

In view of these factors your Directors consider the result satisfactory and have again recommended an ordinary dividend of 7½% and a transfer to General Reserve of £20,000.

The sale of our wooden case manufacturing Unit at Port Melbourne resulted in a profit of £39,879, which has been transferred to a Special Reserve account—**Profit on Sale of Fixed Assets not acquired for Re-Sale.**

Inventories

Inventories show a reduction of £220,030 on the previous year and, in the opinion of your Directors, can be further reduced. Inventories at the close of the Company's financial year are necessarily at peak levels, as June 30 follows closely the end of our tomato processing season.

Plant Operations

We are constantly examining our plant facilities to ensure that we are equipped with modern and efficient machines.

The detailed study of our operating procedures which was instituted some twelve months ago is beginning to bear fruit in greater production efficiency in our various plants. Your Management will continue to pursue its objectives of producing quality products at economical costs.

Reference is made earlier in this report to the sale of our wooden case plant in Port Melbourne. The rapid swing from wood cases to cartons for packing was the determining factor in the sale of this asset.

Plans are well under way for erecting a new carton manufacturing plant on land at Box Hill in Victoria, which your Company acquired some two years ago. This new building will bring into production the modern corrugated machinery referred to in our last report, and add considerably to our production facilities.

Advertising and Merchandising

Promotion of Kia-ora Products during the year was continued in those media which have proved successful in the past, namely Full colour pages in national women's magazines, the ever popular radio feature, Kia-ora Sports Parade, spot radio announcements and colourful point of sale material for store promotions.

The leadership which your Company has attained is the result of making quality products at fair prices, and backing those products with consistent advertising to the public, and progressive merchandising through food stores.

Financial

The past year has witnessed an improvement in the liquid position of your Company. A large reduction in bank overdraft and accounts payable was made during the year. Details are given elsewhere in this report.

Your Board, while satisfied with this trend will continue to pursue the policy of further improving the liquid position of your Company.

During the year your Company acquired the interests of outside shareholders in one of our subsidiary Companies—Kia-ora Products Pty. Limited. This Company, in line with our other subsidiary Companies, is now wholly owned.

The Kia-ora Family

A successful business is made up of individuals, each having the same objectives, each contributing to policies, plans and methods which will ensure steady growth and sound development. The success of our Company means greater security for our employees and our shareholders.

We should like to acknowledge the important part which all members of the Kia-ora Family have played in carrying out the Company's activities for the year just closed. It is the loyalty, effort and co-operation contributed by all that has made continued progress possible.

The Future

The last ten years have witnessed many changes in the packaged food industry. New and better products, in convenient form, are becoming available to the housewife. Modern packaging techniques, and new technological developments in processing food are providing fresh opportunities for expansion for the industry. Your Company is constantly striving to improve the existing products, and to develop new and profitable products, so that we can share in the expansion which, we believe, lies ahead of us.

General

Other than as shown in this report, there have been no abnormal circumstances in the opinion of the Directors, affecting the Company's operations.

In addressing shareholders at the Annual Meeting held on October 12, the Chairman made the following remarks:

Inventories

By the end of this month inventories will have been reduced by, approximately, £180,000, when compared with June 30 last.

Bank Overdraft and Accounts Payable

The reduction in inventories is being applied in reduction of bank overdraft and accounts payable.

Domestic Sales

Sales on the domestic market for the first quarter of the current year are, approximately, 10% higher than sales for the first quarter of last year.

Export Sales

Export sales for the first three months of this year have been steady.

H. Beecham & Co. Ltd.

Timber Millers and Merchants

Reg. Office: 624 Lonsdale St., Melb. **'Phone:** MU 6361. **Directors:** H. G. Beecham (Chairman and Joint Manag. Director), L. H. Matters (Joint Manag. Director), A. J. Moir, L. J. Winter. **Auditor:** C. G. Landy.

Year ended June 30, 1953. Meeting September 25, 1953.

Turnover was materially lower than last year's record, and profit was reduced to £47,870. New taxation rates will reduce the company's tax liability by approximately £8,440, leaving a final profit of £56,310.

Usual dividend of 8% was well covered.

At the Annual Meeting held on September 25, the Chairman, Mr. H. G. Beecham, made the following remarks:

Turnover for the year has, as forecast at our last Annual Meeting, shown a material reduction and this, combined with the rise in costs due to basic wage adjustments, has naturally been responsible for a fall in our profits for the year. These you will note are stated in our accounts as £47,870, but it must be noted that our accounts were compiled before the new taxation rates were announced, and we believe that the provision made for taxation may be reduced by approximately £8,440, thus raising actual profits of the year to £56,310.

Stocks

Stocks held have been very considerably reduced, and at £400,034 are, we believe, at a figure in accordance with present day requirements.

The Company's financial position has been rendered much more liquid than at the close of the previous year—Bank overdraft having been reduced to £29,255. We have, as usual, been indebted to the Bank of New South Wales for its support.

Employees' Benefit Fund

The Company, as you are aware, has established a non-contributory Benefit Fund for its employees, and this has been added to each year since its inception. Nevertheless we, in common with most other old established businesses, are threatened by the provisions of the proposed long service leave bill. Its effects cannot yet be completely gauged, but would appear to bear most heavily on companies like our own.

Conclusion

We believe the Company may face the now-current year with reasonable confidence.

I, in common with the other members of the Board, would like to express appreciation of the fine service given to the Company during the year by its Executives, Staff and Employees generally.

At the Annual Meeting held on October 19, the Chairman, Mr. J. M. Shaw, gave the following address:

I am pleased to record that the year ended June 30, 1953, has been another very successful year for our company. Due to the economic setbacks which occurred during 1951/52 and which affected Australian industry generally, the financial year began with a noticeable lack of confidence. In view of this, I feel that the record sales achieved and the near record profit of £55,692 before company tax is a most satisfactory result.

Stocks and Turnover.

Our major aim for the year was to reduce our stocks to a level which would ensure that the company's finances were sufficiently liquid. It was expected that in achieving this objective, turnover would have to be reduced. However, through careful planning and efficient management, the rate of stock turnover was increased from an average of four times for the two previous years to 5.3 times for the year under review. Because of this, turnover was slightly increased even though stocks were substantially reduced.

Our stock at the end of the year, at £165,663, is however lower than I believe it should be if we are to supply all of our customers' requirements. Some increase in stocks held is therefore to be expected, but such increase will be kept strictly within the limit of our financial resources.

Appropriations.

An amount of £21,500 has been provided for company taxation on the net profit of £55,692 for the year under review. This amount has been calculated in accordance with the reduced rates of company tax announced in the Budget speech on September 9, and leaves £34,192 as the net earnings after tax. Out of these earnings your Board is recommending a final ordinary dividend of 7½ per cent., making 15 per cent. for the year. On that basis, total ordinary dividend for the year will absorb £13,050, and the preference dividend £2,500. This will leave £18,642 of the year's profit to be retained in the business, of which it is recommended that £15,000 be transferred to General Reserve.

Development Programme.

And now your company is ready for the next step in our overall plan of development and consolidation. The emphasis over the past two years has been on consolidation, and now we are ready to embark on a further period of development. Firstly, it is essential that we increase our productive capacity, and steps have already been taken to achieve this. In addition, we must modernise our warehouse, and a plan is at present being prepared to redesign the interior of Leroy House. When these alterations have been completed I feel sure that our warehousing efficiency will be greatly improved. These steps are in line with our major objective—to manufacture and sell profitably more garments of a higher quality at lower prices.

New Share Issue.

To obtain the necessary funds for these alterations and the expansion of buildings, plant and machinery, we intend issue to existing ordinary shareholders a further 116,000 ordina 5/- shares at par. Based on the company's earnings in the pa and present indications of the future level of business activity believe that we will be able to maintain ordinary dividends at t rate of 15 per cent. on the ordinary share capital, including t new issue.

Preference Dividend Rate.

Your Board has also decided to recommend that in order th preference shareholders may participate in the success of the co pany's operations the 5 per cent. cumulative preference sha should participate with the ordinary shares to 6 per cent. W interest rates at a higher level, I believe that this step is o fair and reasonable. Proposals to alter the rights attaching the preference shares in this way will be submitted to shareho ers in meetings to be convened after the new issue of ordina shares has been made.

Overseas Associations.

I have just returned from the United States of America wh I spent seven weeks investigating the latest manufacturing styling trends. I found a great number of changes in all facets this industry, and, through the assistance of our associates, D Bellsey Company Incorporated, I was able to bring back with a considerable amount of valuable information and many n plans which we hope to put into operation during the next twe months.

The Current Season.

We have just completed our initial summer showings throu out Australia, and I am very pleased to report that orders in h for delivery during the first six months of this current financ year are higher than ever before. Our summer range was m enthusiastically received, and we now have a definite indicat that the season will be most successful.

However, business never runs quite smoothly, and we h been experiencing a hold-up of materials from local suppli which has delayed our deliveries to customers. This bottlen has now been eliminated, and we look forward to greater prod tion during the next few months.

The gradual easing of import restrictions will be of gr benefit to our company. Even though materials from local ma facturers are the main source of supply, it is essential that have the world markets available so that we can offer our c tomers the variety of cloths they require.

Appreciation.

I feel sure that this current year will be a successful for our company, and wish to thank all those people who associated with our company and whose assistance has made p sible the success of Leroy—our shareholders and customers, suppliers, contractors and agents, my co-directors, and the exe tives and staff of the company.

Through its Melbourne Head Office and a chain of 21 branches in Victorian and New South Wales centres, the company distributes automotive spare parts, engineering tools, garage equipment, marine engines and accessories, also radios and cycles of its own manufacture.

It is planned to extend the new Fitzroy factory for automotive reconditioning and to transfer other activities from Head Office. Because of parking difficulties in the city, the property adjacent to Head Office has been sold.

The following address was given by the Chairman, Mr. L. W. Crouch, at the Annual Meeting held on October 27:

While turnover was slightly lower than during the previous financial year, we have been able to increase our gross margins, with the result that the gross profit is slightly higher than that of the previous year.

Rising costs of operations have made the net (pre-tax) profit lower by £7,887 than that of the previous year—the result, however, can be considered satisfactory.

It is gratifying to learn of the reduction in the rates of Federal Income Tax, announced by the recent Federal Budget, and the amount we have provided for taxation this year is £39,796, leaving a net profit, after taxation, of £65,667. This represents an earning rate of 10.3% on shareholders' funds. After allowing for the preference dividends paid, the rate on ordinary capital is 20%.

Your Directors recommend the payment of a final dividend of 7½% on ordinary stock capital, which, together with an interim dividend of 5% paid in April last, makes a distribution of 12½% for the year—The final dividend to be paid on October 27, 1953.

The payment of this increased ordinary dividend, together with the preference dividends, will make a total distribution of £43,222 for the year.

Balance Sheet.

In my last report to you I pointed out that our stock in trade had reached a record high figure, and was in excess of our working requirements. I also indicated that steps were being taken to bring the assets and liabilities to a better ratio.

It is pleasing to be able to report to you that this has been achieved, mainly, by the reduction of our stocks by £145,743.

On the other hand, the liabilities have been reduced by approximately £168,000, principally by reductions in the bank overdraft and by amounts due to trade creditors.

The financial position of the company is now more stable, the ratio of current assets to current liabilities has been increased from 1.8 last year to 2.3 this year.

I am of the opinion that our stocks should not be further reduced to any great degree as it is necessary for this company to hold large stocks at our many distributing centres to cater for the requirements of the automotive trade.

Trading Conditions.

Our branches, distributed throughout Victoria and Southern New South Wales, including our Dandenong branch, which was opened less than two years ago, continue to give satisfactory results.

The company purchased premises at Frankston during the year, and a branch was opened there on July 1 last. Figures from this latest branch are promising, and it is considered that it will fill a long felt want for the automotive trade in Frankston and the Mornington Peninsula.

Our Automotive Reconditioning factory situated at 94 Young Street, Fitzroy, is an important factor in the service which the company provides for the automotive trade.

Negotiations have just been concluded for the purchase of the premises adjoining this factory. It is our intention to extend further the activities of our automotive reconditioning service. Portion of the building will be used to transfer the wholesale cycle division from its present location at our head office, thus giving more display space there. This move will have the effect of grouping our automotive reconditioning, cycle and radio sections under the one roof.

The sales of cycle, cycle parts and accessories, as anticipated and reported last year, have remained slack. This is a trade that is fast becoming a seasonal one, mainly at Christmas time.

Parking conditions are having a most serious effect on the business of our city sections, and it is evident that the company will be compelled to cater for our customers outside the city boundaries. Because of this, the company has disposed of its property in Elizabeth Street adjacent to our Head Office. The transaction was concluded early in July, and is not reflected in the accounts for the year under consideration.

I am glad to be able to report that turnover is being maintained, and it is confidently expected that the results of this year will compare favourably with the past one.

Reduction of income tax, of sales and payroll taxes, and the stabilisation of the basic wage all tend to bring renewed confidence in commerce. In addition, these should assist materially in helping the company to check the constantly rising costs of the past few years.

Staff Relationships.

To obtain a maximum efficiency, an organisation must have a good relationship with its employees. This company is fortunate in always having had the confidence and loyalty of its staff.

Benefits extended to members of the staff include annual bonuses, superannuation, group insurance facilities, a savings scheme and a right to take up employee shares in the company. The total amount of employee shares allotted has now been taken up, indicating the confidence of the staff in the future of the company.

I tender to the members of the staff yours and my thanks for their loyal and devoted service to the affairs of the company.

Conclusion.

I am confident of the sound position and of the future of the company. Automotive transport is an ever-widening field of business, and while competition is becoming keener in the trade, it is welcomed. Competition tends to create a maximum efficiency and ensures that the customer gets good value for his money.

It is regretted, however, that Governmental action has been taken to restrict heavy road haulage. Such policies tend to restrict further development of distant areas and to increase the transport costs for the community.

The Myer Emporium Ltd.

Universal Providers.

Reg. Office: 314-36 Bourke St., Melb. **'Phone:** FY 220. **Directors:** N. Myer (Chairman and Controlling Manag. Director), A. H. Tolley (Joint Manag. Director), E. M. In addressing shareholders at the Annual Meeting on November 5, the Chairman, Mr. Norman Myer, said:

Your Directors are pleased to report that the past trading year stands out like a beacon in the history of your Company. It was a year of great achievement, both in sales and profit, despite the fact that the early months were difficult in many respects. To achieve these results, we had to attain a consolidated turnover of £33,000,000, serve 47,000,000 individual customers, and closely control our selling costs.

Net Profit

The increase in net profit of the parent company from £351,000 last year to £613,000 this year was the result mainly of three factors:

(a) a quicker stock turnover and therefore correspondingly lower mark-downs
(b) intelligent control of expenses without jeopardising service to our customers
(c) relief in taxation.

I cannot emphasise strongly enough that this additional net profit was not made by charging higher prices. On the contrary, the actual rate of profit on each article sold was even lower than ever, the improvement in total results being achieved by the facto just mentioned added to still keener buying.

It may be interesting to stockholders to have again this ye the analysis of each pound spent with us, which is as follows:

Payment to suppliers for merchandise bought from them	14 8d
Wages and salaries paid out to staff	3 6d
All other expenses	8d
Income tax	6d
Dividends to stockholders	4d
Retained in reserve to promote the growth of the business	4d
Total	£1 0 0d

From this dissection you will see that the margin left to t retailer after paying for his goods and meeting the expenses selling is very narrow, demanding careful and discriminating manag ment. In this regard, we feel that consumers in Australia a fortunate compared with the rest of the world.

Stocks

Although stocks were reduced by £1¼ million, we feel justifial proud of the fact that our variety of mercandise was not impair

o any disastrous degree. Naturally, the drastic import restrictions lid mean the depletion of many lines of imported goods, and customers have felt the absence of those goods, but to some considerable extent the gap was made good by the ingenuity and resourcefulness of local manufacturers. As those responsible in part for finally filling the public's needs, we are glad that the Government has deemed it wise to gradually ease these import restrictions.

Finance

The outstanding change in our financial picture was the extreme fluidity of the Company's liquid assets, due principally to the reduction in stocks. This is counterbalanced in our figures by an investment of over £1 million in easily realisable securities.

Book Debts

These show an increase of £500,000, due mainly to increased trade and the growing demand for credit terms. Adequate reserves exist to cover all possible bad debts and contingencies, and the collection rate is very satisfactory.

Reserves

Following our usual policy of ploughing back into reserves an adequate provision for future development, your Directors recommend that this year we place £175,000 to General Reserve. It is pleasing to note that total reserves are now approximately equal to the paid-up capital of the Company.

Taxation

Sufficient provision has been made to meet probable liability for tax, which we estimate at £600,000. We are of the opinion that the recent reduction in company taxation will give a decided impetus to employment, to trade in general, and to the purchasing of new plant, machinery and other capital assets used in production.

REVIEW OF SUBSIDIARY COMPANIES AND OPERATIONS

The Myer Emporium (S.A.) Ltd.

Our largest subsidiary, The Myer Emporium (S.A.) Ltd., completed the most successful year in its history, both in volume of sales and in final profit. As already published in the press, net profit after making all provision for taxes, depreciation, etc., was £302,000. This compares with £227,000 the previous year. These results attest in very convincing fashion the goodwill which has been established in the minds and shopping habits of the people of South Australia.

This year will mark the Silver Anniversary of our South Australian company. Its achievement over 25 years of service to the shopping public and to the State of South Australia is amply demonstrated by its present position and results.

The progress of the State of South Australia over this period has been very striking and we are pleased that we, as a retail organisation, have been able to more than keep pace with that progress. It is interesting to reflect that over that period our sales volume moved from £500,000 per annum to £9,000,000, and employment from 1,200 people to 2,500.

Wendouree Woollen Mills Pty. Ltd.

This is the new name of our woollen manufacturing company at Ballarat, previously known as The Myer Woollen Mills Pty. Ltd. The reason for this change of name was that the demand for our Mill products outside our stores became so important that we had to alter the previous policy of selling almost entirely to the Myer organisation and open a much wider distribution. As a result we are today selling our products in every State of the Commonwealth, and output is completely booked up until June, 1954.

To finance this additional development, it became desirable to convert £200,000 of advances from the parent company into paid-up capital, and this was accordingly completed during the year under review.

As you are probably well aware, conditions in the woollen industry have been very difficult for the past eighteen months, but I am glad to tell you that these difficulties have been surmounted, and we are looking forward to a successful outcome of the year now in progress.

The Myer Emporium (Geelong) Pty. Ltd.

Since the close of the trading year our Geelong subsidiary has been brought under the Myer name. The rebuilding programme there is now completed, and we believe it to be one of the finest stores of its size and kind in the world. Operations were to some degree handicapped by the disturbances of rebuilding, but the road is now clear for them to give the best in value and friendly service to their customers, and results for the new year are so far very encouraging. We planned this store on similar lines to those of the parent company in order to give as far as possible the same value and variety to Geelong customers as available in Melbourne. Accordingly the Geelong store now possesses such shopping conveniences as a complete food section, rest rooms, dining facilities, and a modern car park on the roof so that customers can leave their cars there and walk straight into the store.

The Myer Emporium (Ballarat) Pty. Ltd.

In Ballarat, too, our subsidiary store has now been brought under the Myer name. After nearly two years of modernisation, we felt that this store had reached the stage of progress and development when this change was justified and desirable. Results for the past year were highly satisfactory, and the pressure of new business has necessitated a further large rebuilding scheme which has already been commenced.

Economic Cash Buying Co. Pty. Ltd.

This is another subsidiary which provides an excellent credit service to Myer customers, and the management and staff are to be congratulated on completing the most successful year in their history.

Myer Production Units

The largest and most important of our production units is the furniture and furnishings centre at Footscray, which not only provides a furnishing service of which we are all proud, but amongst other things produces the highly esteemed "Heritage" brand of furniture. This range has been acclaimed throughout Australia as outstanding in both design and quality, and continues to command strong support from the buying public.

As mentioned at previous meetings, we are primarily retailers and do not voluntarily enter the manufacturing sphere unless the goods we need are unobtainable in any other way. Last year, with improved local production, we were enabled to curtail our other manufacturing activities so that now we have a small streamlined group of model workrooms producing style merchandise unavailable elsewhere.

London Office

Last but not least we come to our London buying company. In terms of actual money the goods ordered through London Office were almost negligible because of the import restrictions, but the added enterprise and discrimination exercised there in selecting the right merchandise was really an achievement in itself. The spending of every penny had to be scrutinised to get full value for it, and results have shown how well this was carried out.

This relatively quiet year gave our overseas buyers the opportunity to carry out general market research on a larger scale; and we were also able to bring out to Australia six of the younger buyers in order to study local conditions and get to know at first hand both us and the other stores for which they buy. Our Managing Director in London, Mr. Max Rhoden, has also spent some time with us, it being over seven years since he last visited us. His stay will be beneficial both to the London organisation and to ourselves.

Our Suppliers

It is pleasing to know that as Australia's largest retailers, our organisation last year bought from local suppliers no less than £24,000,000 worth of Australian-produced merchandise, in this way helping to keep many thousands of people in regular and full employment. The drastic import restrictions made it necessary for suppliers and ourselves to work in even closer collaboration than usual in order to fill the wide gap which these import restrictions caused in the supply picture. Our suppliers also had to embark upon the production of new merchandise not hitherto produced in Australia.

Developments during the Year

The year under review has been one of great achievement. In the Melbourne store eight new escalators have been completed and a new parking garage for 500 cars commenced in Lonsdale Street. This garage will provide a service which will be appreciated, not only by Myer customers, but by all car-driving users of the city.

A new butcher's shop has been opened; and a new Food Mart, a new coffee shop and a new cafeteria seating 1,000 people are amongst other developments of the year. A complete reorganisation has been carried out of the ground floor, including new lighting. A permanent budget accounts system has been commenced; an additional 20,000 feet of floor area was allotted to the hardware section; our basement store has been re-equipped and re-furnished; the men's store has been extended; and a new bakehouse was opened at Collingwood.

In Adelaide the building purchased from Fowler's has been remodelled, and we are now in full occupation. There, too, a new bakehouse was installed. The whole of the Adelaide Store has been modernised and re-equipped, and an additional floor allotted and furnished for the extension of the men's section.

Our woollen mills have been modernised and much of the plant replaced with the most up-to-date machinery.

At Geelong, as mentioned earlier, the store has been completed, replanned and refurnished, and at Ballarat similar extensive improvements have been effected.

An organisation such as ours must be constantly on the alert for new trends and developments, and these are some of the things achieved in pursuance of this aim in the course of last year's trading.

The Future

There has been a splendid result in the community in general from the corrective measures applied by the Government over the past two years, and in consequence the insecurity and misgiving then prevalent have been replaced by a great measure of confidence. The recent budget has also given the people of Australia an added incentive. This accession of confidence has already been reflected in the new year's trading just commenced. Retail trade is a fairly reliable indicator of current trends, and from all we can learn, this improvement is general throughout Australia.

We look ahead into this coming financial year with confidence. The prices of primary products are holding up splendidly, and both production and employment are at their highest.

(Continued on next page)

THE MYER EMPORIUM LTD. (Contd.)—

Australian costs of production, however, are still high, and the most pressing need before us is to explore every worthwhile means of bringing these costs more into line with world standards. There is a great unsatisfied demand for all goods and services, and basically there should be ample work for everybody who is willing to work.

As far as our own city is concerned, there are still many shortcomings, and we have many problems yet to overcome. Melbourne has a great potentiality of becoming one of the finest cities in the world if those responsible for its destiny can act with the vigour and decision needed to lead it along this road.

Knowing that the city of Los Angeles is specially outstanding today, we felt that it might be helpful to bring out the man who was responsible for the planning of that city, to advise and make suggestions towards the solution of Melbourne's civic problems. We therefore brought out at our own expense Mr. Charles Bennett, a world authority on city planning. He studied the difficulties here in collaboration with government, semi-government and civic instrumentalities, and before leaving, made concrete and definite recommendations to the authorities concerned.

We sincerely trust his efforts will not be wasted; for I canno but fear, after consultation with various well-informed authorities that unless quick action is taken, there is a very real risk tha the city of Melbourne may drift into a state of unplanned and un regulated chaos. We are well aware that everything cannot b done at once, but we would urge that an immediate commence ment be made with at least some of the suggestions put forth by Mr. Bennett and the Town and Country Planning Association

For example, one of the most urgent problems confronting u is that of parking. As a company, we have already given a stron lead by building a parking area, but no one thing is capable o providing a complete solution to the parking problem. A co-ordinated organised plan has been suggested by the Los Angeles city planner and this would, if adopted, largely overcome the present chaoti state of affairs in our city.

In conclusion, as far as your own company is concerned, I hav already voiced the confidence we feel in the future. Your organisa tion is geared to meet any emergency, and I believe we were neve better equipped in material, men or spirit than we are today. Ther should be no reason, humanly speaking, why our report to you year hence should not be as satisfactory as that now presented and I hope it will in fact prove to be so.

At the Annual Meeting of the Company held on October 23, the Chairman, Mr. L. J. Abrahams, delivered the following address:—

I should like to make a brief comment or two on past results, and future prospects.

You will have observed the new arrangement of the Annual Accounts this year. The improved lay-out, paper and printing, are, I feel, in keeping with the standing of the Company.

On the inside back cover of these Accounts is listed the wide range of products manufactured by our subsidiaries, principally by our major subsidiary, A. Abrahams and Sons Pty. Ltd., Melbourne and Sydney.

Continuous research is carried out to keep the Company abreast of the latest developments, both here and abroad, with the object of constant improvement in our manufacturing technique and efficiency. Our Managing Director, Mr. Arthur E. Abrahams, has just returned from a visit to the major sources of supply of our raw materials, and to the chief manufacturing plants in our line of business in Europe, Asia and America.

Profits

The results of operations during the past year have been very pleasing. Earnings have been more than maintained, and the Directors are very hopeful that this satisfactory state of things will continue.

Dividends

Payment of a final dividend of 4½% is proposed. This wi make the total 9% in line with last year's payments; 7% of th year's dividend is taxable and 2% tax free. I might repe here that the policy of the Company is to pay reasonable dividend while building up reserves to consolidate the Company's financi structure, and enable it to withstand any adverse changes in bus ness conditions that may arise in the future.

Raw Materials

In 1950 the Indian Government's export duty on hessian w 1,500 rupees per ton (£141/3/9 Aust.). This duty caused ma consumers to look for substitute materials, and to limit their pu chases to the minimum requirements.

The consequent falling off in demand for hessian forced t Indian Government to progressively reduce this duty. At June 3 1953, it stood at 275 rupees (£25/17/8 Aust.), but since then h been further reduced to 120 rupees per ton (£11/5/11 Aust.). Yo Directors had regard to this position, and have made provisi for it in the accounts.

Sales Trend—Current Year

Your Directors are confident that sales volume will be at lea on a par with the year just past, although reduced prices m affect the monetary total of turnover. Competition is keener t day, but the Directors have complete faith in the ability of o Group of Companies to meet this challenge.

Melbourne, 30th October, 1953.

North Broken Hill Limited

Head Office: 360 Collins St., Melb. **'Phone:** M 1421. **Other Share Register:** London. **Directors:** M. H. Baillieu (Chairman), A. R. West, M. L. Baillieu, O. H. Woodward, J. C. Guest, G. C. Lindesay Clark. **Auditors:** Cook, Tomlins & Mirams; Davies, Boldeman & Co.

47th Year ended June 30, 1953. Meeting October 30, 1953.

Average prices realised for lead and zinc were much lower than previously. The value of mine production was £2,551,511 lower, despite an increase of 16,661 tons in ore extracted, this year's total being 353,514 tons, the highest for some years. Mine expenditure rose slightly, and the revenue from working was £2.6 million lower at £1,692,101.

Profit was almost £1 million lower and dividend was reduced from 8/6 per share to 4/6 (90%).

	1953.	1952.	1951.	1950.
Value of mine production	**£5,923,625**	£8,475,136	£7,770,418	£4,427,134
Less—Mine expenditure	4,231,524	4,166,907	3,359,417	2,431,791

Net appropriation for new plant and mine develop.	910,895	1,057,733	1,111,217	584,157

Published ore reserves are 130,000 tons less at 4,702,000 tons, due in part to the deletion of ores which are uneconomic at present prices. Further development in the No. 3 shaft area is proceeding, but will cost more than at first estimated. It will be some years before the plant and equipment now being provided will function as part of the productive machinery of the mine, but construction is now more than half completed.

During the year the company made the following additions to its investment portfolio:—

Associated Pulp & Paper Mills Ltd.—93,437 shares of £1 each, paid to 10/-.

Imperial Chemical Industries of Aust. & N.Z. Ltd.—47,114 shares of £1 each paid to 12/6.

Metal Manufactures Ltd.—72,891 shares of £1 each, fully paid.

Timber Industries Pty. Ltd.—25,000 participating redeemable shares of £1 each paid to 10/-.

The portfolio at balance date was as follows:—

Amalgamated Metal Corporation Limited	21,110 Ordinary Shares of £1 each.
Associated Pulp & Paper Mills Limited	467,184 Ordinary Shares of £1 each. 93,437 Ordinary Shares of £1 each, paid up to 10/- per share.
The Australian Ore & Metal Co. Pty. Ltd.	500 Shares of £1 each.
British Australian Lead Manufacturers Pty. Ltd.	88,626 Ordinary Shares of £1 each.
The Broken Hill Associated Smelters Pty. Ltd.	546,576 Shares of £1 each.
Commonwealth Aircraft Corporation Pty. Ltd.	87,500 Shares of £1 each.
Commonwealth Steel Company Ltd.	33,147 Shares of £1 each.
The Consolidated Zinc Corporation Ltd.	52,632 Ordinary Shares of £1 each.
Courtaulds (Aust.) Ltd.	100,000 Shares of £1 each.
Electrolytic Refining & Smelting Co. of Australia Pty. Ltd.	23,357 Shares of £4 each.
Electrolytic Zinc Co. of Australasia Ltd.	692,308 5/- Stock Units.
Globe Pty. Limited	19,000 Shares of £1 each.
Goodlass Wall & Lead Industries Limited	23,062 10/- Stock Units.
Imperial Chemical Industries of Australia & N.Z. Ltd.	134,610 Ordinary Shares of £ each. 47,114 Ordinary Shares of £ each, paid up to 12/6 pe share.
Kalgoorlie Southern Gold Mines No Liability	50,000 Shares of 5/- each, pai up to 4/- per share.
Metal Manufactures Limited	824,812 Ordinary Shares of £ each. 32,414 Cumulative Preferenc Shares of £1 each.
Perry Engineering Co. Ltd.	10,000 Ordinary Shares of £ each.
Timber Industries Pty. Ltd.	25,000 Participating Redeem able Preference Shares of £ each, paid up to 10/- pe share.
Western Mining Corporation Ltd.	12,500 5/- Stock Units.
Western New South Wales Electric Power Pty. Ltd.	230,800 Shares of £1 each, pai up to 4/- per share.
Zeehan Mines Pty. Ltd.	18,500 Shares of £1 each.

The average price realised in overseas sales of lead (re presenting 84% of production) was £A115/12/3 a ton, again £A187/6/9 for the previous year. Australian sales of lead an zinc were freed from price control in April, 1953.

The Chairman in his address reprinted below stated that h believed that the long term prospects for both lead and zi are sound.

The Chairman, Mr. M. H. Baillieu, delivered the following address at the Annual Meeting on October 30:—

Before we proceed with the business of the Meeting, I wish to pay a tribute to the memory of the late Sir Walter Massy-Greene, who had been a Director since 1939. Through his wide knowledge of business and finance, Sir Walter contributed a great deal to the affairs of this Company. All with whom he was associated held him in the highest regard, not for his ability alone, but also for those more personal qualities of kindliness and understanding. We miss him very much indeed.

Mr. G. C. Lindesay Clark has been appointed to fill the vacancy on the Board. Mr. Clark is a mining engineer and brings with him long experience in the administration of mining affairs whi will be of particular value to the Board in its deliberations.

On behalf of the Board I present to you the Balance She Statement of Accounts and Directors' Report for the year end June 30, 1953. As a copy of these documents has been forward to each stockholder, I propose with your concurrence to take the as read.

Financial

The net profit for the year was £1,600,058. As you will ha read in the report, the decrease in profit from that of the previo year was caused mainly by the fall in the price of lead and zinc.

Following the cessation of bulk buying by the United Kingdom Ministry of Materials and the re-opening of the London Metal Exchange in October, 1952, for the sale of lead, there has been a change in the marketing of that metal. Whereas in recent years lead was mostly sold on wharf Port Pirie, at the close of the past financial year export sales had reverted almost to the pre-war basis, namely, pricing subsequent to shipment. As a result, a substantially greater quantity of lead than formerly remained unsold at the end of the year.

Silver stocks unsold were also higher at the close of the year.

The effect of the smaller volume of sales on the year's profit has been largely offset by increased valuation of the unsold metals in lead concentrates.

Although there was a decline in lead bonus payments corresponding to the lower prices for lead, mine expenditure nevertheless was somewhat higher than in 1952. The principal factors contributing to that increase were higher wages in accordance with the quarterly cost of living adjustments, and considerably higher costs for timber, stores, water and power. Mine expenditure was affected also by the greater footage sunk in No. 3 Shaft and the increased tonnage of dump residues and crude ore treated.

As a consequence of the lower net income from mine production, the provision for taxes and royalty was very much less than in 1952. The welcome decrease in rates of company taxation recently announced by the Federal Treasurer also reduced the amount which had to be set aside for taxation.

Investments

You will recall that I told you last year that The Broken Hill Associated Smelters Pty. Ltd., in which we have a large holding, was constructing a sulphuric acid plant at Port Pirie. The brimstone burning section of this plant commenced producing yesterday.

It is now expected that the gas purification train and the third Dwight and Lloyd Sintering Machine will be completed within two years. Acid will then be produced from gases arising from the treatment of lead concentrate and the use of brimstone will cease.

The Electrolytic Refining and Smelting Company of Australia Limited in which your Company holds a 40% interest has had a successful year despite a recession in the demand for refined copper due to a decline in capital expenditure by governmental and semi-governmental bodies and in building generally. I am advised that since the close of the year, with the falling level of consumer stocks, the demand has shown signs of recovering.

Stable labour conditions contributed to the satisfactory results achieved during the year and they also assisted the Company to push ahead with its plant reconstruction programme. The completion of the major projects is now in sight.

I am pleased to report that the British Australian Lead Manufacturers Pty. Ltd. group of companies also had a very good year's trading. The turnover increased, and costs remained fairly stable. B.A.L.M. continues to expand, and additional units for the manufacture of paint and other products are to be erected in Australia and New Zealand.

We have, as you know, a large interest in Metal Manufactures Limited, and through it, in Austral Bronze Company Pty. Ltd. (its wholly owned subsidiary) and a trio of cablemaking companies, in each of which Metal Manufactures holds approximately a half-interest.

That is a strong group of industries, each of them producing non-ferrous metal goods basic to Australia's commercial and electrical development.

There was a reduction in output of some of the factories, which are situated in New South Wales, Victoria and Tasmania. Among the reasons for the reduction were the uncertainty of base metal prices, the lower expenditure on certain State enterprises through the reduction of loan funds, and some slackening of business activities. To-day, however, there is welcome evidence of greater market health in practically all the fields in which these Companies are operating, and we look forward with confidence to their future.

Commonwealth Aircraft Corporation Pty. Ltd. in which your Company is a shareholder, has had a year of great activity, mainly in the production of "Avon/Sabre" Jet fighters and Rolls-Royce "Avon" gas turbine engines.

The North American Aviation "Sabre" fuselage was redesigned by the Company to incorporate the "Avon" engine, and the first "Avon/Sabre" made its initial flight in August, when the sound-barrier was broken for the first time in Australia in the presence of the Prime Minister and other members of the Federal Cabinet.

Production of this aircraft for the Royal Australian Air Force is proceeding and will be accelerated during the coming year. The manufacture of the "Avon" engine has been successfully developed and it is now being produced for both "Sabre" and "Canberra" aircraft.

Another matter of interest is that the "Winjeel" trainer, designed by the C.A.C. and adopted as a standard training aircraft by the R.A.A.F., is also being produced at Fishermen's Bend.

You will have noticed in the Report that we have taken up 25,000 participating redeemable preference shares of £1 each in Timber Industries Pty. Ltd.

An equal number of those shares, the balance of the issue, was taken up by Broken Hill South Limited.

Timber Industries Pty. Ltd. holds extensive hardwood rights near Oberon, N.S.W., under licence from the Forestry Commission in that State. For some time past we have obtained part of our timber from that Company, but, with the increase in its capital and the consequential expansion of its logging and milling capacity, it will shortly supply most of our mining timber.

Timber Industries Pty. Ltd. also produces at its Oberon mill timber cut to various sizes to meet the needs of the building and other industries.

Since our other principal investments are in public companies whose reports and accounts are published, I do not propose to comment on their activities.

Mine

The sinking of No 3 Shaft was continued throughout the year and at June 30 had reached a depth of 815 feet. Since then it has been sunk a further 205 feet. The ventilation shaft, which had reached a depth of 1,489 feet at the end of June, was continued to a depth of 1,636 feet, at which point connection was made with a series of winzes which give direct connection to the 2,600 feet level. These winzes will now be stripped to the full size of the ventilation shaft.

This year has seen considerable progress with work on the surface associated with the new No. 3 Shaft, the chief sections being the installation of the main winding equipment, construction of the breaker station and changehouse buildings and provision of electric, compressed air and water services.

So far as capital expenditure is concerned, we are now past the half-way mark on equipment needed for sinking the shaft itself and on buildings and plant necessary for productive operations when the shaft comes into use. In my report for the year ended June 30, 1951, I stated that the timing and costs then estimated for that work could be changed considerably by various causes and I indicated that, on costs applying at that time, the total expenditure would probably be about £3,500,000.

Since those earlier estimates were made, costs have risen chiefly through large increases in wages and in the price of materials. For example, the basic wage has risen by 30% during the past two years.

It is true that capital expenditure has been somewhat reduced by the decrease in the lead bonus; but the rise in the basic wage and the higher cost of material used in construction apply, of course, to work wherever it is being carried out in Australia.

Delay in delivery of major items of plant, which has been the rule rather than the exception, is another factor adversely affecting costs. As a result, the cost of such plant when it is delivered to us is often well above the original tender price based on costs ruling at the time the contract was let.

Because the work still to be carried out could be subject to influences similar to those which have affected our costs hitherto, it is not possible to state definitely what the final outlay on our programme will be. However, I can state that expenditure up to June 30, 1953, has been more than £2,500,000 and a review of our estimates indicates that, based on current conditions, the total expenditure for the programme now in hand will be about £4,500,000.

In the accounts which are before you to-day, £1,050,000 has been provided from last year's profits for expenditure in the current year on new plant and mine development. Of that amount, approximately £700,000 will be spent on the No. 3 Shaft plant and buildings and £200,000 on equipment for normal year-to-year needs. The balance is provided for development.

For our next financial year, 1954-55, we shall again have to provide a substantial sum for construction; but, after that, the yearly capital expenditure in the No. 3 shaft area should be appreciably less.

Regarding progress of the work, I also indicated in 1951 that approximately 80% of the construction associated with the present programme would be completed by June 30, 1954. However, due largely to the many serious delays in delivery of plant, to which I have referred, it now appears that, provided the present rate of construction is maintained, the figure of 80% must be reduced to between 70% and 75%.

It will, I think, be of particular interest at this time to mention that it is almost thirty years since the decision was made to sink No. 2 shaft. That we are now proceeding with such a large programme of new works designed to provide for the continued mining of the ore body, which at greater depth gets farther away from the No. 2 shaft, indicates our faith in the potentialities of this great mine.

You will have seen in the Annual Report that the production of ore from all sections of the mine was 353,514 tons, or 16,661 tons more than in the previous year, despite the fact that there were five less working days. That is the Company's highest output for some years past and was chiefly due to the use of more mechanical equipment in the North Section of our workings

You will also have noticed that this year ore reserves are 130,000 tons less than they were at June 30, 1952, due to the slowing down of development in the No. 2 shaft area and to the deletion from reserves of several low grade blocks in the British-Block 14 sections which have become uneconomic by the fall in the base metal market. As I have stated at previous meetings, the curtailment of development in the No. 2 shaft area is in accordance with the plan to defer major development until it can be carried out more economically from the No. 3 shaft when it has reached the 3,070 feet level. Shareholders, however, may be assured that there will be sufficient development in the No. 2 shaft area each year to maintain normal production.

During the year the diamond drilling programme on the leases north of the De Bavay Fault was actively pursued in an endeavour to determine whether the main ore body continued beyond the fault. Although no lode material of any magnitude was intersected, the information obtained will help toward a fulier knowledge of the geological structure of that area.

The average grade of crude ore treated was higher than that of last year, due to the smaller quantity of ore obtained from the British-Junction and Block 14 areas. The concentrating mill again operated most efficiently. Recoveries were slightly lower than in the previous year; but the variation was within the range to be expected in large scale work.

(Continued on next page)

NORTH BROKEN HILL LIMITED (Contd.)—

Since I last addressed you, the dump treatment plant has finished treating the Junction North slime dump as well as some 60,000 tons of material from the De Bavay Dump which, owing to its proximity to the No. 3 shaft, would in any case have had to be moved. Because of the increases in costs and the lower metal prices now prevailing, profit from the treatment of the dump has become marginal in recent months. For that reason, with the treatment of the De Bavay dump material completed, the plant will close down next week.

I am pleased to be able to tell you that the supply of labour during the year was satisfactory, although it has been necessary to form trainee parties of miners to provide a sufficient number of skilled men for productive operations.

Negotiations for a new industrial agreement to operate for the next three years were concluded on April 12, 1953. The main concessions granted included long service leave, also increased marginal rates for certain classes of employees. You will remember that long service leave was granted in New South Wales generally by an amendment of that State's industrial legislation in 1951.

You may recall that last year I mentioned that the pipeline from the River Darling to Broken Hill, a distance of 62 miles, had been completed on June 11, 1952. The mining companies at Broken Hill played a decisive part, both financially and in other ways, in hastening the completion of that project.

It was indeed fortunate that the pipeline was finished last year, as, although Broken Hill received 10.65 inches of rain for the twelve months ended June 30, 1953, only a few points fell in the catchment areas. The mines and the city were therefore entirely dependent on water pumped from the River Darling.

Our employees again availed themselves of the amenities scheme and purchased household appliances to the value of £25,828, bringing the total to £99,959 since the commencement of the scheme in 1950. The two building societies sponsored by our Company were active during the year and 177 homes have now been obtained by Company employees through those societies. Since there is a waiting list of employees desiring to purchase or build homes, a third building society is now being formed.

In pursuance of the Company's usual policy, various welfare and community organisations were granted financial assistance during the past twelve months.

Outside Properties

An examination was made by members of our geological staff, operating from Broken Hill, of several copper prospects in the north-west of Western Australia. Some diamond drilling tests were made; but results were not sufficiently encouraging to justify further work and our options were allowed to lapse.

General

All of the lead and zinc concentrates which we produced during the year were sold to The Broken Hill Associated Smelters Pty. Ltd. and the Electrolytic Zinc Company of Australasia Ltd. respectively at prices based on the average of overseas and Australian prices.

Of the lead derived from our concentrates a substantially greater proportion was exported than in the previous year. It rose from 69% to 84%, of which 72% was sold to the United Kingdom, and 24% to the United States of America. The average price realised in overseas sales of lead was £A.115/12/3 a ton, compared with £A.187/6/9 for the previous year. The zinc derived from our concentrates which was not required for the Australian market was for the most part sold to the United Kingdom.

Our silver, less that required for Australian industrial purposes, was sold abroad. The average price received for all sales during the year was 7/5⅞ an ounce. In the previous year it was 8/3¼.

You will remember that since December, 1939, sales of lead and zinc in Australia were subject to price control. However, on April 17 this year, more than thirteen years after its imposition, the Australian State Prices Ministers freed both metals from control.

At present, the London price of lead is slightly higher than it was when I addressed you last year whilst the New York price is still the same. The price of zinc in both London and New York is substantially lower than it was then.

The move towards the present level of lead prices began in the second quarter of 1952 and, generally speaking, monthly average prices for 1953 have been lower than they were for the last eight months of 1952. Although industrial consumption in the United States of America is still the dominant factor in the world lead market, it cannot be regarded as a cause of the present relatively low prices. A brief statement of the situation is contained in the 1952 Year Book of the American Bureau of Metal Statistics, which reads—

"The lead supply and demand position in the United States did an about-face in 1952, with a sudden change from scarcity to plenty. This was not due to any drastic change in over-all world supplies or industrial consumption in the United States, rather it resulted from an over-bought position abroad, coupled with comparatively poor business conditions there."

The statement goes on to point out that in U.S.A. primary production, production from scrap and industrial consumption of lead showed little change from 1951, but imports more than doubled.

In the case of zinc, industrial consumption in the United States was down in 1952 compared with that of 1951, largely because of the steel strike and the consequent reduction in the demand for galvanising.

Both lead and zinc have been produced in increasing quantities in the world over the past eight years.

However, even with the increase in supplies, world production of lead from mines is little greater than it was in 1938 and the rate of consumption of virgin lead is much the same as it was for that year. In the case of zinc, the rate of world production and consumption is substantially higher than before the war.

You will not expect me to attempt a forecast of the price of metals. I think that their course in the immediate future will largely depend on the level of industrial activity in the United States of America which, as you know, is a large importer of both lead and zinc. Further, I see no reason to alter the views which I expressed last year, that the long-term prospects for both lead and zinc are sound. New sources of supply are limited and although, for some purposes, the demand for both metals has declined, for other purposes it is expanding.

The present level of prices is reasonably profitable to our Company under existing conditions. We have a great mine. It is in good shape and the completion of our development and construction programme should ensure its continuance as a substantial producer for a great many years.

For the current year our investment income will probably be somewhat less than that for the last financial year.

Staff

I have great pleasure in paying a tribute to the Company's staff at Broken Hill and in Melbourne, which has again served the Company most loyally and advanced its interests in every way.

Treadways Limited

Retail Drapers.

Treadways Limited

The following address was given by the Chairman Mr. R. W. Nevile to shareholders at the Annual Meeting held on October 5:—

The year's trading resulted in a net profit of £65,138—after providing £54,000 to meet income tax—compared with £48,860 in the previous year.

Directors have transferred the sum of £20,000 to General Reserve—which now stands at £120,000—and have recommended a final dividend of 6%, which, together with the interim dividend of 4% paid in April last, makes a total of 10%. This is an improvement of 1% on last year. This dividend takes £45,000, leaving a balance at credit of Profit and Loss Appropriation Account of £4,983, compared with £4,845 brought in.

Since these accounts were prepared, however, the Federal Treasurer has introduced a Budget which provides for a reduction in the rate of tax levied upon companies' profits. If this proposed reduction is confirmed, the provision we have made for tax in our accounts is excessive, and the excess—approximately £11,000—will be carried forward in the Taxation Reserve Account.

The most important aspect of the accounts is the increased liquidity of our finances.

Stock and stores in transit has been reduced from £397,048 to £265,412, which substantially increases the finance available to the Company, in that cash at the Bank on closing date amounted to £54,050, as compared with £6,233, whilst at the same date trade and sundry creditors were reduced from £149,944 to £41,421.

Trade debtors have increased from £38,150 to £51,046, due to the introduction during the latter part of the year of liberalised Budget Credit facilities for our customers.

Return to Normality

Twelve months ago I suggested that retailing, after a period of boom and easy trading conditions, was returning to the normality enjoyed before the war. The post-war period brought to us a boom time of free spending and extravagance, due to the sudden outpouring of money and inflow of people. A return to normality means the abandonment of such rash and reckless spending, and a return to wise and careful husbanding of resources, especially by the homemaker—a trait in the character of the Australian people which has always contributed so much to the growing wealth and stability of this country.

The public wants friendly service, reliable quality, with the utmost value. Treadways have always held the confidence of the shopping public in this regard, but normality in a business such as ours means return to conditions when trading is subject to great elements of risk. The main element of risk in normal trading for a business which is devoted mainly to the supply of clothing, apparel, and drapery, is that of weather conditions. Unless the weather is seasonable, people are not easily tempted to open their purses freely.

This past year we experienced such adverse weather conditions. Winter was late in arrival and summer weather did not demand the replenishment of summer wardrobes until all stores were in the throes of clearance of summer stocks. Such an eventuality is a normal risk and is always a challenge to keen management.

Fortunately we were able to face the situation freed from the shackles of Price Control, and with the flexibility of merchandising thus gained we were able to pass on to our public the benefits of keen marketing. Goods which were clogging the wheels of factories and mills were purchased at low prices and passed on to our customers at prices often below cost of production, at the same time enabling us to clear our own stocks that had accumulated owing to the late arrival of seasonable weather.

The freedom from controls encouraged the initiative and energies of our buyers, bringing to the public clothing and drapery at lower prices during a period of rising costs.

Stocks

The reduction in our stock value as shown on the Balance Sheet indicates the freshness and attractiveness of our stocks. It also emphasizes this return to normality. It was no longer necessary to take early deliveries of new season's goods. Manufacturers and suppliers co-operated in meeting our ever-growing demands for merchandise with a regular even flow of deliveries, sufficient to meet our requirements.

There was no longer the need to build up and hold huge stocks. This contributed much to economy, and enabled us to further our policy of quick returns with small profit margins, also to take full advantage of variation of market trends, and to gather in the utmost in discounts.

In a statistical table recently published, 94.48% of the taxpayers in Victoria are represented in the yearly income groups ranging from £100 to £1,000. It is this large group of income earners that your Treadways Stores specifically cater for. It is our aim to satisfy the growing needs of this large group within moderate and lower levels of income, with inexpensive goods of superior quality and style.

Our large group of experienced buyers and merchandisers are continually searching the Australian and world markets to meet this need, and I would take this opportunity of stressing that Treadways value highly the goodwill they have earned from mills, factories, manufacturers and suppliers throughout Australia. The success of our stores owes much to their ever-ready willingness to meet our needs for high quality merchandise at economic prices.

Expenses

Here also we find a return to normality. During the post-war boom period, expense percentages were reduced to an unprecedented level, but the past years have seen a steady progressive return to the normal expense ratios that existed prior to the war. At the same time, I would be remiss if I did not emphasize that the expense ratio of retailing, as disclosed by the stores in Australia, is lower than the cost of retail distribution in any other country where such statistics are available, and I would remind you that, due to economic management, the expense ratio of Treadways stores is lower than that of any similar stores in Australia, enabling us to be satisfied with a lower gross profit mark up.

Import Restrictions

We are pleased to report a further relaxation in import restrictions, but consider that the economics of our country have been so stabilised that there is no longer any need for the retention of import controls.

It is true that the Australian manufacturers are supplying an ever-increasing proportion of the needs of the Australian people. It is equally true that many of our manufacturers have met the challenge of oversea competition, have shown initiative and economy in management, and are now able to produce goods of equal if not superior quality, at prices which are more than competitive with overseas imports. Even in these cases the importation of comparatively small quantities is desirable, as such imports add variety to the merchandise offering here, and stimulate purchasing interest that is greatly to the benefit of the Australian manufacturer. There are also some lines—increasingly fewer, certainly—the importation of which is greatly to the economic advantage of the Australian people.

We have maintained our properties and fixtures in first-class condition, but the time has come for some major alterations to take place in our suburban stores. These plans are at present occupying the attention of your Directors.

Staff

The continued progress and prosperity of our Company has been made possible by the teamwork of the management and the whole of the staff—all have contributed so much in hard work and enthusiasm.

To all we offer on your behalf our sincere thanks. Treadways value greatly the goodwill of their employees, and it is a source of gratification to the Directors that a large proportion of our staff have a record of many years of service.

The Pension Fund established by the firm of Treadways now stands at over £40,000, and this year we contributed over £8,000 to the contributory Superannuation scheme inaugurated by your Company.

In recent years, production has been diverted from lines of low unit value to higher values and more complicated technique, such as the Pope Washing Machine and enclosed electric motors, wringers and lawn mowers, both hand and electric. This has contributed largely to the marked increase in profits.

Capital Issues consent has been received for the issue of £200,000 eight year 6% unsecured notes, the proceeds of which will be used to finance increasing turnover.

Record results were reported by the Chairman, Mr. S. B. Pope, in his address to shareholders at the Annual Meeting on September 25. The following are extracts from his address:

The manner in which the Australian market is being covered and the spread of your company's activities can be gauged by the fact that all States of the Commonwealth experienced record figures for their territories over the past 12 months or so, and the figures to date for the current month indicate the possibility of every individual State of the Commonwealth establishing new record figures.

The unique design and quality of the range of "Pope" electric motors has won for them growing popularity and confidence, and electric motor sales for the first two months of the current year are almost 400% greater in both volume and value than the corresponding period of the year reviewed. It is a tribute to our design staff and productive organisations that the major contracts have been obtained on a basis of superior quality and performance rather than price.

The warehousing facilities in New South Wales have been considerably enlarged during this year. The Victorian warehouse is in course of enlargement and alteration at the moment, and your company is giving consideration to tenders now received for the provision in Perth of particularly appropriate warehousing facilities on land acquired during the year. The buildings will replace outmoded and inadequate rented facilities at present in use.

With its expanded activities your company has been compelled temporarily to lease bulk storage facilities in several States, entailing duplicated and expensive handling of its products, and more efficient administration of its sales organisations might be expected from the arrangements being made.

With the spotlight generally upon manufacture, shareholders might be unaware of your company's efforts to cater for its sales requirements and thus keep a proper balance between manufacture and distribution. Showroom and warehouse facilities are provided in every mainland capital, catering for the trade needs of every worthwhile store from Broome to Cairns.

The sales offices throughout Australia maintain a staff of some 125 employees and operate a fleet of 43 motor vehicles.

Most close co-ordination and co-operation exists between the design and development section, sales organisation and manufacturing division of your company to ensure the public buying reactions promptly being transmitted to the production lines.

New Products and Development.

Much attention is being focussed upon the design and development of new products for release in the near future and also long term. Considerable investigational work has been conducted into revolutionary and highly interesting techniques of manufacture.

Australia's plans for expansion of its electrical generatin capacity envisage double the existing facilities within the nex decade with transmission to many rural areas not now served Your engineers are planning participation in this development wit the provision of a wider range of electric motors and appliances

Whilst recognising the economic advantages of direct associa tion with large-scale research and design, your company realise that requirements exist peculiar to this market, and that the pro ducts of United Kingdom, the Continent and U.S.A. are designed disregarding both the marketing peculiarities and manufacturin facilities of Australia. Your company, therefore, employs its ow design and development staff to initiate design or to adapt over seas developments to this country's needs. This policy has prove singularly successful, and it is a tribute to the initiative and com petence of your company's design staff that approaches from over seas countries have been made for manufacturing and technica licences for the manufacture of our products. This aspect migh yet provide some palliative for diminishing export trade.

Hire Purchase.

Your Directors are well aware of the importance to industr of hire purchase finance to aid the sale of its products. Withou these facilities the Australian manufacture of motor vehicles electrical appliances and other high unit value mass produce commodities would be deprived of economic production volume an substantially increased costs would result. We believe that th employee who cannot afford home purchase in our present econom will prove a better citizen if encouraged by hire purchase to th pride of possession promoted by ownership of assets of the cate gories mentioned. Limitation of finance facilities for periods dur ing the past year have been noted by your Directors and construc tive thought given this problem.

Note Issue.

The continued upsurge of sales as evidenced since the closin of accounts will introduce fresh financial problems, and it is pro posed to meet these, together with those arising from added financ requirements of retail sales of high unit value by the issue o £200,000 8-year 6% Unsecured Notes with company's option of re demption after 6 years. Underwriting arrangements have bee finalised with Messrs. J. B. Were & Son, Melbourne, subject t Capital Issues consent which, however, has just been received an announced in this morning's press.

Victorian Share Register.

During the year registration has been effected and a branc Share Register opened in Victoria. Appreciation of this facilit has been shown by the fact that more than 200 stockholders hav

transferred from the Adelaide to Melbourne register. There are now 833 registered stockholders in Adelaide and 516 in Melbourne. The average holding is less than £400 per stockholder.

Conclusion.

We cannot ignore the threatened reduction of national income with possible reduction of export prices for wheat, barley, fruit, etc. Of even greater significance are the immeasurably larger problems associated with our vulnerability with such a large proportion of our national income being derived from wool at prices many times the record high of but a few years ago. Some long term comfort might be derived from the income potential of uranium, and possibly oil, but any benefits to be foreseen from these sources could readily prove much too belated to offset the possible difficulties of reduced export prices.

However, we have at our disposal and in our own hands, as a nation, two reservoirs of considerable magnitude and capable of being tapped to counterbalance and buffer such difficulties and thus enable the retention of the living standards desired by all sections of our community. Benefit to our economy can be obtained in two ways. Firstly, by reducing expenditure and, secondly, by increasing income. They are:

A. Reduced national overhead costs in the form of wasteful overlapping and unproductive governmental expenditure.
B. The will to produce and to greater effort by every section of the community, be they employer or employee, or be they associated with tertiary, primary or secondary industries.

Such comment always sounds a trifle hackneyed, but encouragement may be gleaned from the recent Federal Budget and Court decisions. Admittedly, medicines will exist to cure national ills, but it is far to be preferred that the nation act in time to maintain a healthy economy and thus avoid the necessity for unpalatable medicine.

However, with the steady tapping of the unexploited resources of this young country, the national economy should remain sound. Major weaknesses do exist, and many problems as yet without permanent solution no doubt will provide some oscillations on the national graph. Your company's prospects look particularly healthy in the economy of the near future, and, with the maintenance of a high living standard, should remain very healthy thereafter. With alertness, its flexibility should stand it in good stead readily to adapt to circumstances should they dictate changes in the more distant future.

Rodd (Aust.) Ltd.

This company with its subsidiaries manufactures an extensive range of cutlery, jewellery, wristlet watch cases and silverware. Additional patterns of cutlery contributed greatly to the increased turnover for the year. Products previously subject to high sales tax rates have been in much greater demand since the reduction.

In addressing shareholders at the Annual Meeting held on October 12, the Acting Chairman, Mr. W. F. White, made the following remarks:

Through a year of some industrial uncertainty I feel that we have cause to be rather satisfied with our present position. As mentioned in the Directors' Report, our cutlery production has increased considerably and we now supply a wide range of high quality tableware which will be further augmented shortly with the introduction of new designs. The manufacture previously carried on by Tempus Watchcase Co. Pty. Ltd., has been merged with other production by the parent Company for sake of economy and the subsidiary now acts as distributor of our watch cases. Our jewellery continues to hold its high place in the field and with the recent Sales Tax reduction now taking effect, production is fully taxed. Similarly, in silverware, the main subsidiary, Hecworth Pty. Ltd., is holding orders in excess of present productive capacity. In all our activities we retain a high standard of quality which we believe is appreciated and relied on by our trade distributors and the public.

Wage Costs and Imports.

Unfortunately, we, in common with very many other Australian manufacturers, find our costs prohibit our regaining an export market of any note. I must, at the risk of being tedious, again stress that in Australia we cannot have high wages and cheap goods. It just will not work out, and eventually something has to stop the supplying of our needs by countries with much lower wages. We either have import restrictions or unemployment, causing imported goods to be not available or not purchased, or we have a tariff or some other means of giving Australian industry the opportunity to continue to pay its workers so that they in turn can buy the products of their fellow workers in other industries. It is surely obvious that an Australian who, in a week, makes an article, cannot turn round and buy two similar imported articles without some repercussion. Who is going to buy what he makes and how long is he going to keep in employment? It is quite unnecessary to predict unemployment when the demand for goods exists provided the demand is guided in the right direction to preserve our employment and the buying power it gives.

The Future.

I believe we can look forward to our future with confidence. This Company has endeavoured to be conservative in its estimates and forecasts and with a watchful eye on all developments affecting our business we aim to steadily make further progress.

Vesta Battery Company Ltd.

Battery Manufacturers.

Reg. Office: Elizabeth and McEvoy St., Waterloo, N.S.W. **Directors:** S. Airens (Chairman), A. R. Allen (Manag. Director), P. Lovett, W. G. Tester. **Auditors:** E. S. & C. R. Kelynack.

25th Year ended June 30, 1953. Meeting October 15, 1953.

Turnover was again a record and profit was 55% higher at £91,119, giving a return on ordinary shares of 29%, out of which the usual 15% dividend was paid.

The following report by the Chairman, Mr. S. Airens, was circulated to shareholders with the Annual Accounts:

This year, 1953, is our Silver Anniversary—the company was registered in New South Wales in March, 1928. It is appropriate, therefore, that this period was one of considerable development both in storage batteries and in the products of our subsidiary company. Turnover was again a record, and net profit disclosed an equally satisfactory increase.

Profit.

The net profit movements are shown in detail in the Profit and Loss Account, but the significant features are:

1. A gain in net profit before tax from £110,507 to £140,663.
2. A record gain in net profit after tax from £58,754 to £94,320 —which is equal to 30% on ordinary share capital.
3. Underwriting fees on previous share and note issues paid to various brokers—£6.389—have been written off.
4. Taxation has been fully provided for at the current rates announced in the recent Budget.

Dividends.

After adding the balance brought forward and after providing for the underwriting fees and accrued interest on the Registered Note issue the amount available for distribution is £134,431. The Directors recommend the payment of a final dividend of 7½% on ordinary shares (making 15% for the year) and 4½% on preference shares.

Total dividends, interim and final, amounted to £47,408, and this leaves a balance to be carried forward in the Profit and Loss Account of £87,023—an increase of £37,390.

Balance Sheet.

The following additions have been made to reserves:

General Reserve—an increase of £1,860, representing capital profit on the sale of vacant land at Newcastle.

Insurance Reserve—an increase of £3,250, transferred from profit.

Buildings and plant have been well maintained and adequate depreciation provided for.

Shareholders' funds have increased by £45,307—that is, by 1/5 per 10/- share. Total reserves now stand at £172,895, which is equal to 5/6 per 10/- share. It is the Directors' policy to continue to build up and further strengthen the reserve position of the company.

Finance.

The issue of 6% Unsecured Registered Notes amounting to £125,307 recently offered to shareholders was fully subscribed.

The financial situation of the company is satisfactory and allow ample scope for expansion.

Freehold.

During the year we purchased premises in South Melbourn to provide for the expansion of our Victorian Branch. Furth extensions were carried out to our Wellington, N.Z., factory.

Our Products.

The new plant and machinery for the manufacture of th MIPOR Separator (micro-porous rubber bonding both sides of sheet of Fibreglass) is now in full production, and we recently i troduced to the trade our new "De Luxe" Battery, incorporatin MIPOR separators. This battery is recognised by the trade being outstandingly the best battery in Australia, both for star ing capacity and long life. In performance it exceeds all S.A. specifications.

Subsidiary Company.

Vesta Products Pty. Limited continues to expand. New lin recently added include a complete range of high tension ignitio coils and automotive condensers for all makes of vehicles. It the policy of the Directors to continue adding automotive ele trical lines from time to time.

In all our products we are concentrating on quality, and ha already established such a reputation with the trade and t public.

Garage equipment lines recently developed include a new ty of fast charger and three precision instruments for testing coi condensers and voltage regulators.

New Zealand.

New Zealand profit disclosed a substantial rise due to t effect of the delayed price increase referred to in last year's r port. Sales of both batteries and automotive electrical lines we quite buoyant and showed a satisfactory increase over last yea

Future Prospects.

We expect to reap the full benefit of our extensive develo mental work in the current and future years. Competition in sto age batteries is now strong, but we have the advantage of certa exclusive features, and, due to an incentive plan installed in bo factories during the year, we have been able to arrest the co tinually rising costs.

Your Directors feel that the company is in a favourable pos tion to meet all competition, and they have every confidence in t future.

Careless smoker started midnight blaze

GRINNELL SPRINKLERS PUT OUT THE FIRE

Grinnell Automatic Sprinkler systems guard millions of pounds worth of Australian property 24 hours a day, 365 days of the year. Insurance companies reduce your insurance premiums by as much as 50% as soon as Grinnell is installed. That's why, in time, Grinnell pays for itself.

If you're insured, you are paying for Grinnell protection right now. Why not have it?

For all information contact Wormald Brothers in your State.

WORMALD BROTHERS SYSTEMS
FOR PROTECTION AGAINST FIRE

SINCE 1889 WITH OFFICES AND WORKS IN ALL STATES OF AUSTRALIA AND NEW ZEALAND

At 8 o'clock on Saturday night the foyer of the 2UW Theatre was thronged with patrons enjoying a smoke. One smoker carelessly dropped his cigarette butt on the settee instead of into the ash tray beside it. The glowing butt became so firmly wedged into the cushions that it was hidden from the Theatre Manager when he made his usual inspection before leaving the Theatre.

At midnight a brisk blaze broke out in the cushions. Heat rose to the ceiling and burst the Grinnell Sprinkler head. The fire was out in 30 seconds. At the same time an alarm automatically rang in the fire station. Two minutes later the brigade arrived and shut off the water.

At 12.15 a.m. a new sprinkler head was in position — the water had been turned on and Grinnell was on guard again. 2UW held its usual show in the theatre on Monday morning. But without Grinnell that fire could have destroyed the entire city building.

In his address to shareholders at the Annual Meeting on December 3, the Chairman, Mr. Staniforth Ricketson, said:

"Unless considerations of political expediency are allowed to influence official judgment, it appears logical that future Commonwealth loans should be issued at a rate lower than 4½ per cent.

"In these circumstances, investors in gilt-edged securities would be well advised to take immediate advantage of the present favourable opportunities for obtaining income yields which may not be available a few months hence — and possibly not for quite a long time to come."

Referring to the trend of the share market, Mr. Ricketson said:—

"The assembly of favourable economic factors, satisfactory overseas trade balance and the generally better monetary position have not as yet been reflected in the share market. Prices of equity shares have remained firm, but, over the last few months they have tended to be static, though all the favourable circumstances would, in pre-war days, have stimulated considerably greater buying activity, accompanied by rising values. For the most part, however, investors have remained quiescent, and the greatest activity has been in respect of the numerous attractive new issues which have recently been before the public."

His address reads:—

It is the sad duty of the Directors to place on record the loss of a most valued colleague and beloved friend in the person of Sir George Dalziel Kelly, who had been a Director of the Company since 1938. Sir Dalziel was a Director of each of the other investment companies of the Capel Court Group, having joined the Boards of the four oldest companies in September, 1938, subsequently becoming a Director of each of the newer companies as formed. During his association with the group he made splendid contributions to the development of the various companies and to their prestige, just as he did in the many other spheres in which he was known as a man of outstanding ability and integrity.

To fill the vacancy caused by the demise of Sir Dalziel Kelly, Colonel F. H. Wright, O B.E., V.D., accepted an invitation to join the Board of this and the other companies. Mr. E. Aston Lloyd was appointed to act as Alternate Director for Colonel Allan Spowers, D.S.O., M.C., and Mr. R. S. Clayton wa appointed as an Alternate Director for myself.

ACCOUNTS OF THE COMPANY

During the year Paid-up Capital of the Company was fu ther increased to £350,000 by an issue of 100,000 shares (su sequently converted to stock units) of 10s. each. In accordan with the long-standing practice of the companies in the Cap Court Group, these shares were offered to shareholders at pa the proportion in this case being one new share for every s stock units held.

Such new share issues are invariably offered at par to stoc holders in proportion to their holdings, thus affording oppo tunities for the progressive investment of their savings. It appropriate here to recall that, since 1945, Paid-up Capital h been increased from £75,000 to £350,000 by six successiv issues. All of these issues have been made at par, though, several instances, the old shares were standing at materi premiums in the market when the new issues were made.

RESERVES AND UNDIVIDED PROFITS

In financial circles, opinions differ as to the need for a investment company of the managament type like your own build up reserves and undivided profits in its own accounts. O school of thought holds that, as investment companies have substantial equity in the undistributed profits of companies which shares are held, the annual income should be fully di tributed to stockholders.

Whilst this argument has some validity, your Directo prefer to pursue a conservative policy designed to build up r serves and undivided profits which will serve to augment t income-earning capacity of the stockholders' capital. As result of this policy, Paid-up Capital of the Company, whic was £350,000 at 30th September, 1953, was supported by tot reserves and undivided profits of £44,303, comprising: Gener Reserve, £33,000; Revenue Appropriation Account Carry Fo ward, £7,089; and Investment Fluctuation Reserve, £4,214. Th total was arrived at after providing for taxation and for t recommended dividend in respect of the year ended 30th Se tember, 1953.

AUGMENTING EARNING CAPACITY

In addition to the building-up of reserves, the compani in the Capel Court Group normally make use of a certa

amount of outside funds (which, incidentally, is subject to statutory limitation in Victoria) to augment the earning capacity of the stockholders' funds. The total of outside funds and provisions employed at 30th September last was £85,010, which was £9,842 greater than at the same date in the previous year.

The movements in Current Liabilities and Provisions during 1952-53 were as follow:—

As at 30th September.	1952	1953	Increase or Decrease
Provision for Taxation	£2,300	£2,524	+£224
Provision for Dividend	16,500	16,500	—
Loans Against Security	—	375	+375
Bank Overdrafts Against Security	53,795	54,243	+448
Sundry Creditors	278	220	—58
Securities Bought but not Delivered	2,295	11,148	+8,853
	£75,168	£85,010	+£9,842

Thus, with £50,000 of additional capital, an increase of £5,149 in reserves and undivided profits and the growth of £9,842 in current liabilities and provisions, the total funds employed as at 30th September, 1953, were £64,991 greater than at the previous balance date. This enabled a corresponding increase to be made in the assets total, which, treating the Investment Fluctuation Reserve as part of Stockholders' Funds, rose from £414,322 to £479,313.

The £50,000 of new capital was brought in only just before the close of the books in 1953, and, as at that date, £28,028 still remained to be invested, being held as Cash at Bankers. With a total of £1,664, representing £150 of Securities Sold but Not Delivered at the balance date and £1,514 of Sundry Debtors, this comprised the only Assets apart from the Investment Portfolio.

VALUE OF INVESTMENTS

The bulk of the funds employed at 30th September, 1953, was represented by Investments, at cost or under, £449,621. These represented 297 individual stocks (as against 290 in 1952), 88.5 per cent. of the total value being ordinary shares, 11.1 per cent. preference shares, and 0.4 per cent. bonds and debentures.

As at 30th September, 1953, the market value of these investments was £497,348, an appreciation of £47,727, or 10.62 per cent., on cost.

The market value of the holdings of an investment company at any particular date is only of academic interest, because such companies are designed as permanent entities and can, therefore, afford to ignore normal market fluctuations in security values. In broad terms, the objective of the management is to invest the company's funds in sound stocks, with a view to reaping the long-term benefits of the growth in the national economy and in the development of particular industries. The portfolio, however, is kept under constant expert review and changes of investments are made as circumstances warrant. All profits or losses on changes of investment are credited or debited to the Investment Fluctuation Reserve, which under Victorian law is a capital reserve not available for distribution to stockholders in the form of dividends.

NEW ISSUE SHARES ACQUIRED

During periods when the national economy is in process of expansion, investment companies have many opportunities of acquiring new issue shares on a very favourable basis. Since the trade recession, dating from late in 1951, these opportunities have been fewer than was the case in the earlier post-war expansionist period. Nevertheless, during 1952-53 your company, through allotments of rights or purchases in the market, acquired a total of 16,707 shares (of which 1,590 were bonus shares) in 21 different companies, plus £5,870 of registered unsecured notes and 6,650 share options in two other companies.

Since the balance date, several important new share issues have been announced by companies in which Jason holds shares, and if, as expected, Capital Issues Control ceases at the end of 1953, further favourable opportunities in this respect may be anticipated.

REVENUE AND EXPENDITURE

Total receipts from dividends and interest amounted to £26,000, which, after deducting interest paid on loan funds and adding £125 derived from underwriting commissions, gave a revenue of £23,875. This compared with £28,723 for the year ended 30th September, 1952. Management expenses and taxation provision were relatively small, totalling £2,353, as compared with £3,078 in the previous year, the main reductions being £335 in rent, salaries, office and general expenses, and £450 in provision for taxation.

The net revenue of £21,522, a reduction of £4,123 on that for 1951-52, was equal to 7.2 per cent. on the paid-up capital employed during the year, as against 8.5 per cent. in the previous year.

After provision had been made for the payment of a dividend at the same rate as that paid in 1951 and 1952, namely, 5½ per cent. per annum (requiring £16,500), £5,000 was transferred to the General Reserve and £22 added to the carry forward in Revenue Appropriation Account.

SURVEY OF ECONOMIC CONDITIONS

When trade and industry meet difficulties after a period of abounding prosperity the views of the pessimists are given full rein to paint a picture which is often much more gloomy and disturbing than the facts of the situation warrant. Conversely, when the economy of a country shows signs of emerging from a period of recession, the optimists are usually in the ascendant, and the picture they paint is often rosier than is justified.

During the last two years Australia has seen both sides of this picture. When stringent monetary conditions developed as a result of the fall in wool prices and the flood of imports during a period of high expansionist activity, many gloomy forebodings were heard, and in some quarters a severe economic depression was forecast. Since a new cycle has been entered, the pessimists are fewer, and the extent of the recovery which has taken place tends to become exaggerated. Such manifestations of the alternating fears and hopes which beset the human mind may temporarily mitigate, but cannot alter, the effects of the fundamental factors on which the soundness of the national economy rests.

Australia's Position Stronger

Over the last twelve months, Australia's position has undoubtedly improved. This improvement has been reflected in various ways. The huge accumulated stocks built up during the import boom have been substantially reduced, thus removing some of the barriers to the free flow of trade. With another bountiful season and increased primary production, plus a material recovery in wool prices, export income has risen encouragingly, whilst, through severe official restrictions, imports in 1952-53 were only half the record total reached in the previous year.

Largely as a result of these movements, Australia's international balances, which had fallen in 1951-52 to what was regarded by the Commonwealth Government as a dangerously low level, have materially recovered. Gold and balances held abroad have risen to over £490 million, as compared with £327 million at the corresponding stage in 1952. The improved overseas trade position has been reflected in banking statistics, which, for quite some time now, have shown an unusually high degree of liquidity.

Interest Rates More Stable

A significant manifestation of the easier monetary conditions which have developed is seen in the greater stability of interest rates. Between early 1951 and the final quarter of 1952, pressure of public loan demands in a market chronically under-supplied have forced interest rates steadily upward from the artificially pegged levels of the war and post-war years. Present indications, however, suggest that the reverse process may soon be under way. The first tangible evidence of the change came with the overwhelming success of the recent Commonwealth new money loan, when the public subscribed a total of £65.8 million in respect of the amount of £50 million sought.

(Continued on next page)

JASON INVESTMENT CO. (AUSTRALIA) LTD. (Contd.)—

That this result was not due to fortuitous circumstances has been proved by the steadily growing strength of public buying of Commonwealth loans on the Stock Exchanges over the last few months. At this time last year the percentage of total purchases of Commonwealth issues on The Stock Exchange of Melbourne attributable to buying by the public generally was around 30 to 40 per cent. or less; in recent months it has been running around 60 to 70 per cent. Moreover, the average redemption yield acceptable to buyers of the nine 3½ per cent. and 3¼ per cent. Commonwealth Government issues maturing in 1956 or later, has decreased to around £4/7/2 per cent. per annum. This represents a fall of nearly ¼ per cent. on the average yield of £4/12/- per cent. available from these issues at the same time last year.

Will Rates Decrease?

As a result of the resurgence of public confidence in gilt-edged securities, and the belief that interest rates have reached their peak, the capital values of all listed Commonwealth loans have advanced to premiums over the prices at which they could be bought twelve months ago. In November, 1952, a capital outlay of £8,131 would have been involved in the purchase of £1,000 (face value) each of the nine issues referred to, but on current market prices this holding would now have a capital value of £8,323 — an appreciation of £192, or 2.36 per cent. over the last twelve months.

The growing strength of the Commonwealth loans market due to the widely accepted belief that interest rates have reached (and are about to recede from) their peak is illustrated by the graph which appears opposite. That graph has been plotted actuarially to trace—

(1) The monthly variations in the average redemption yields available from all Commonwealth Government loans with maturities in 1956 or later, and

(2) The redemption yields offered by new Commonwealth longer-term loans at the time of issue since May, 1951, when the rate of 3½ per cent. prevailing since early 1947 was first modified by an issue at a 10/- per cent. discount.

More Realistic Official Policy

The graph will repay careful study, as it will demonstrate that, for a long time, the market was requiring a higher redemption yield from existing Commonwealth loans than the authorities were prepared to offer in respect of new issues. The situation began to change radically as from April, 1953, when the 4½ per cent. rate for new issues was becoming increasingly acceptable to investors, who were ready to buy Commonwealth loans in the market on a redemption yield basis below that rate.

Perhaps, however, the dominant aspect highlighted by the graph is the manner in which the authorities for so long fought a losing battle against the realities of the public market assessment of the appropriate rate for Commonwealth loans. It was, indeed, not until official policy capitulated to public opinion by making an issue at 4½ per cent. when the market was accepting lower redemption yields that the Commonwealth was able, for the first time for some years, to achieve a resounding success with one of its loans.

The results of this tardy recognition of the rights and requirements of the lenders, who, after all, are the citizens of Australia, are likely to be far-reaching. It has already operated towards the creation of a situation in which it should be possible to reverse the upward trend of interest rates. Consequently, unless considerations of political expediency are allowed to influence official judgment, it appears logical that future Commonwealth loans should be issued at a rate below 4½ per cent.

Investors Should "Go Long"

In these circumstaces, investors in gilt-edged securities would be well-advised to take immediate advantage of the present favourable opportunities for obtaining income yields which may not be available a few months hence—and possibly not for quite a long time to come.

During periods such as the present, when the stage seems to b set for a continued easing of monetary conditions, it is fundamentally sound policy for gilt-edged investment to be kept as long as possible, consistent with the individual need for reac cash at specific intervals. In support of this view, it is appro priate to examine the position from the point of view of th market values of existing Commonwealth loans in the event o future issues being made at coupon rates below 4½ per cent.

On the basis of the new money rate of 4½ per cent. for l years for the recent Commonwealth loan, the capital value o the 3¼ per cent 15/9/1950-59 issue to give an equivalent re demption yield would be £93/12/11. Assessed on a £4/7/6 pe cent redemption yield basis, however, the capital value of thi issue should rise to £94/5/2, or on a 4½ per cent basis, t £94/17/7. In other words, assuming the basic yield on ne Commonwealth loans were to be reduced to 4½ per cent, the 3 per cent 15/9/1950-59 issue would offer a "rise potential" o £1/4/8 per cent.

The recent 4½ per cent 15/10/1966 issue naturally presen an even greater "rise potential." Issued at par (£100), th capital value might logically be expected to rise to arou £101/4/5 if a new Commonwealth loan were issued at £4/7/ per cent, or to £102/9/3 if the rate were 4½ per cent. On th latter basis, the potential rise in the capital value would reac the attractive level of £2/9/3 for every £100 of the loan hel

All these factors and assumptions combine to confirm th premise that, under present conditions, Commonwealth loa offer oustanding attractions for long-term investment. "G long" is, indeed, a sound principle for gilt-edged investors a time when interest rates are in process of downward re adjustment.

Fall in Interest Rates in U.K.

Recent trends in interest rates in Australia are in keepin with those which have occurred in the United Kingdom an elsewhere, which is only natural, as this country cannot b insulated from the effects of world monetary factors. It wi be remembered that, in the middle of September, somewha of a sensation was caused in London financial circles, an indeed, throughout the Sterling areas, by the announcement o a reduction in the English Bank Rate. That rate had bee stepped up from 2 per cent to 2½ per cent in November, 195 and had remained at the latter level until March, 1952, whe it was further increased to 4 per cent. It was not till Se tember 17, 1953, that a change was made by reducing th rate to 3½ per cent.

The reduction had an instantaneous effect on the gilt-edge market, which later extended to industrial equities, and th stimulus thus supplied has since been maintained. The ½ pe cent reduction would not of itself have been sufficient to brin about such sweeping changes, which were, as recently explaine in "The Economist," London, attributable mainly to the beli that it was also "a clear precursor of further reduction."

Quite recently, the London "Financial Times" made th following interesting comment in its issue of November 1 1953:—

> The buoyant conditions that have continued to chara terise the Stock Exchange, and especially the upward marc in gilt-edged stocks, have revived gossip about Bank Ra possibilities. It is almost exactly two months since th authorities made their venture in flexible monetary polic and, despite all that was said at the Bankers' banquet, th belief persists that the ½ per cent. cut in Bank Rate made mid-September was only the first move in a more far-reachin reversal of the dearer-and-tighter credit policy the Gover ment adopted exactly two years ago.
>
> There has been evidence recently of the return of instit tional investors to the gilt-edged market; recent events the Discount Market itself also suggest that the next mo in Bank Rate will be downwards.

The transformation which came over the gilt-edged mark following the reduction in the Bank Rate as from September 1 1953, is shown by the following table of gilt-edged yields the London market, cleaned from the most recent edition "The Economist," to reach Australia:—

(NEW LOAN - 4½% PAR, 9½ YEARS - RAISED MAR - APR 1953)
(NEW LOAN - 4½% PAR, 13 YEARS - RAISED SEPT. - OCT. 1953)

The declining trend of interest rates since November, 1952, is demonstrated in the above graph, which accompanied the address of the Chairman (Mr. Staniforth Ricketson) at the annual meeting of Jason Investment (Company (Australia) Limited on 3rd December. The graph compares the average redemption yield on market prices for all Commonwealth loans maturing in 1956 or later with the rates offered for new Commonwealth loans issued since January, 1951.

December, 1953

Lower Rates for Australian External Loans.

Further evidence of the relatively swift downward trend in interest rates in the United Kingdom is supplied by the manner in which Australian loans in London have been affected. The Commonwealth 3 per cent 1972-74 London loan was quoted on the London Stock Exchange in June, 1952, to give a redemption yield of £4/16/2 per cent; at the time of the announcement of the reduction in the Bank Rate, the redemption yield was £4/11/7 per cent; and since then it has come down to around £4/2/2 per cent. Moreover, only last week, the Commonwealth announced that its conversion loan of £10.8 million in London would be issued at £99½ with a coupon rate of 4 per cent for a currency of 12-14 years, the yield to ultimate maturity being £4/1/ per cent. This compared with a redemption yield of £4/15/1 per cent offered in respect of the Australian conversion loan issued in London in July, 1952, the terms then being 4½ per cent at £98 for a currency of 8-10 years.

Recently, also, the Commonwealth Government announced that a public loan of 60 million Swiss francs (approximately £A6 million), underwritten by a Swiss banking group, would shortly be launched on behalf of Australia. The issue is to be made at £99, carrying a coupon rate of 4 per cent with a currency of 12-15 years. The redemption yield offered by this loan to latest maturity will thus be approximately £4/1/4 per cent.

Longer Currencies Favoured.

The pattern disclosed by the graph published with this address, showing the course of redemption yields on internal Commonwealth loans, aligns closely with that disclosed by the foregoing table illustrating the trend of gilt-edged yields in the United Kingdom. A further significant aspect emerges from a study of both markets, namely, that the trend in new gilt-edged issues is towards longer currencies.

The most recent and highly successful Commonwealth loan floated in Australia offered a currency of 13 years for the longer-term section, as compared with 9½ years for the issue made in March-April, 1953, and 9 years for that made in November-December, 1952. Similarly, the recent Commonwealth conversion loan in London lengthened the currency to 12-14 years, as compared with 8-10 years for the issue made in July, 1952, whilst the Swiss loan is for a currency of 12-15 years. These facts are of considerable significance to the experienced operator in the gilt-edged field, who knows that the lengthening of currencies is a normal feature in times when the immediate future course of interest rates is likely to be downward.

Holdings by Institutions.

Pursuing the matter a still further stage, the comment made by the "Financial Times" regarding the return of institutional investors to the gilt-edged market has considerable significance. Here again, we may find a parallel in Australia. According to statistics published in the September issue of the Commonwealth Bank "Statistical Bulletin," holdings of Life Assurance Offices of Commonwealth Government securities fell from £233 million, or 11.7 per cent of the total, in 1949 to £197.8 million, or 8.4 per cent, in 1952. In 1953, these holdings increased by nearly £6 million to £203.7 million, though this represented only per cent of the total.

Holdings of Commonwealth Government securities by banks other than the Commonwealth Bank and Commonwe Savings Bank declined from £285.7 million in 1951 to £2 million in 1952, but, by June, 1953, had risen to £304.3 mil It is known that both the Life Assurance Offices and the t ing banks were relatively strong supporters of the re Commonwealth internal loan, and that the trading banks du the last few months have very substantially increased t holdings of Commonwealth loans.

All these facts strongly support the view that the yi available from Commonwealth loans offer outstanding att tions at the present time. They further confirm that, in v of the probability of a downward trend in interest rate the not-far-distant future, it is sound policy for gilt-ed investors to concentrate on the longest available currenc unless their circumstances necessitate pledging their funds only a limited time ahead. By "going long" such investors ensure the continued receipt of income at peak rates of inte and may at the same time have the satisfaction of seeing t holdings go, in the course of time, to a material premium the purchase price.

Public Body Loans.

Whilst a high degree of stability appears to have b reached in respect of borrowings for government purpo the same satisfactory position has not yet developed in reg to the loan requirements of semi-governmental and l authorities for the current financial year. Many public lo for these bodies have been raised at the permissible maxim rate of 4¾ per cent, and quite a substantial sum of money also been obtained in the form of private loans at the missible maximum of £4/17/6 per cent.

Results of the public issues so far launched have va considerably, some having achieved over-subscription, wh others have not reached the required totals. One reason the under-subscriptions, which have been mostly in respect loans of large amount, has undoubtedly been the fact that stitutions, which in pre-war days were the main source finance for these bodies, have practically deserted this field the search for other more lucrative avenues of investme As a result, public bodies have become more and more depe ent on the small investor for the loan funds they require carry out essential public works, and these small invest tend to become confused by the continuous stream of wid advertised appeals which are made to the market.

It should not be forgotten that an unusually large sum money was drawn from the public market by the recent Co monwealth new money loan. This attracted total subscripti of £65.8 million, as compared with new money subscriptions only £20 million to Commonwealth loans at the same stage 1952-53.

Further Large Calls on Market.

A large amount of money still remains to be raised various public bodies during the balance of the current financ year. Nevertheless, it would appear that the pressure for l funds for public bodies will not be as severe as it was in t corresponding period of 1952-53. On the other hand, demar for capital by public companies are already substantial, a may well continue to be so in the coming months, particula if, as expected, Capital Issues Control ceases to operate at t end of 1953. In addition to large amounts of equity capi being sought by several companies, issues of company debe tures and registered unsecured notes at attractive rates ha been announced or are expected in the near future.

The great development which has taken place in the sho term money market in Australia during the last year or and the large amount of capital being sought by finance co panies represent still further competition for the public bodi

The public body rate of 4¾ per cent, particularly wh backed by a Government guarantee as to principal and interes is quite attractive under existing conditions. It will becor more so, if the next Commonwealth loan, due about Mar next, is issued at a lower rate than 4½ per cent and the publ body rate is not lowered from the present level. As in the ca of Commonwealth loans, the opportunities now being offered

public body loans are probably the best which are likely to be available for quite some time to come. In these circumstances, investors would be well advised to take advantage of the present situation and invest at a very satifactory rate for the longest available currencies.

Problems Confronting Australia

Although general economic conditions are better than they were last year, industrial management and industrial labour in Australia are faced with great problems and great responsibilities in the period that lies immediately ahead. It is their task, and, it may be added, their privilege, to provide for the needs of Australia's constantly growing population, which, since 1939, has increased by some 1¾ million, or over 26 per cent. In doing so, they have the opportunity of making significant contributions towards building a sound economic structure and still further raising our already high standards of living. Moreover, as they have done in the past, they can help materially in enhancing Australia's prestige in the eyes of the world and in adding to the economic and military security, not only of the local population, but also of the great assembly of Western Democracies as a whole.

For several years after the end of the war, world conditions enabled Australia to rehabilitate and considerably expand her industries under a hitherto unprecedented form of protection. This was because so many great industrial nations had been thrown into a state of chaos as a result of the destruction of their industrial potentials and the diversion of manpower and machines to war production. Thus, for the first time in the history of this young country, her industries were presented with a market which was virtually free from overseas competition.

This fact, combined with a succession of bountiful seasons and surprisingly good markets for wool and other primary products, enabled our secondary industries to expand and develop to a degree which would not have been possible but for the protection afforded by war and post-war world conditions. Those years were marked by great achievement on the part of both industrial management and industrial labour.

Late in 1951 and early in 1952, however, we received a stern warning in the form of a flood of imports which were highly competitive with local production. The situation was met—but only tardily met—by the expedient of wholesale official restrictions on imports from overseas. Those import restrictions gave Australia a brief breathing space in which to dispose of the huge volume of imported goods which flowed into this country within a surprisingly short space of time. Now, however, this artificial rampart is being progressively demolished by successive relaxations of the import cuts first imposed by the Commonwealth Government in March, 1952.

Already during 1953 permissible import quotas have been substantially increased on three occasions—in April, July and October. A further revision is promised early in 1954, and Australia's own position, combined with world circumstances, suggests that the time may not be far distant when import restrictions will prove to be not only impolitic but quite impracticable and even dangerous.

Overseas Competition Increasing

In their preoccupation with our own internal affairs, and in the enjoyment of the phenomenal prosperity resulting from the lush post-war years of high export income, few Australian citizens have found the time to study the puzzling phenomenon referred to in the public Press from time to time under the mysterious symbols "G.A.T.T." How many individuals, indeed, could translate those symbols as representing what is known as the "General Agreement on Trade and Tariffs"? Yet, for several years now, discussions have been going on amongst the representatives of many countries, which may—indeed, most certainly will—ultimately have a profound effect on the economic welfare of this country and on the living standards of the Australian people as a whole.

The subject is much too complex to be dealt with in any degree of detail in an address of this nature. In broad terms, however, the objective of the long-protracted "G.A.T.T." discussions is to arrive at a basis which will result in fair and equitable trade relations between the signatory countries. Reducing the matter to simple elements, the ultimate outcome of the discussions will almost certainly be an arrangement based on the principle of greater trade reciprocity between countries which provide markets for each other's products.

Bringing the implications still nearer home, how long can Australia expect a country like France to continue to buy (as she did in 1952-53) Australian products of an aggregate value of £76 million and be content to sell in the Australian market only £9 million of her own exports? Similarly, will Germany be satisfied to take £22 million of goods from Australia and sell only £13 million of her own here? And will Japan continue to buy £84 million of goods from us each year in return for the privilege of selling £4 million worth of her products here; or Italy buy £44 million from us and sell to us only £5 million worth of goods?

A moment's consideration will leave no doubt as to the answer. Yet, despite the obvious and menacing implications of the situation, only a small, select band of farsighted Australians has realised that we are, so to speak, living on "borrowed time" in a fool's paradise.

Need for Lower Costs

In the flush of our prosperity, no concerted effort has been made towards the achievement of greater industrial efficiency and a lower general cost structure. Lest you think that this is too general and sweeping a criticism, I hasten to add that, in certain fields of industrial endeavour valuable progress towards these objectives has been made. Nevertheless, results of permanent value cannot be encompassed until the whole community, employers and employees alike, accepts wholeheartedly, and gives earnest, practical expression to, the doctrine of harder, more conscientious, more concentrated and efficient endeavour.

The answer does not lie in applications to the Tariff Board for increased import duties, and it is encouraging to note that, in its last annual report, the Board issued a salutary warning on this score. Moreover, under the changing face of world industry and world trade, many countries which emerged from the recent war in a state of absolute chaos have now gone a long way towards rehabilitating their industrial strength and their capacity to drive a hard bargain with countries which have benefited from their weakness in the post-war years. The solution to the problems which confront Australia in the immediate future, and which will remain with us for many years to come, goes much deeper than arbitrary official restrains and controls. Except in times of war, these cannot be otherwise than temporary expedients and palliatives. The only real solution goes right down to the heart and spirit of the men and women in this community.

Strong Leadership Required

Leadership lies with our public men, with the public Press and radio, with those whose privilege it is to guide the destinies of our industries — and with the great industrial unions established to safeguard the welfare of the workers. Public men have the responsibility of formulating and implementing national policies, designed to provide the greatest facilities for the development of industry, particularly through the easing of taxation and other burdens. The public Press and radio can do much to inform the public mind as to the problems confronting Australia and the appropriate solutions therefor, and to build up the morale of the people as a whole.

These are fundamental tasks, but the real solution of our problems in essence lies with those who control and direct industry, and with the people, individually and collectively, who do the actual physical work. Management in industry is primarily responsible for formulation of plans in regard to the production and the finance related thereto; for the adoption of modern techniques in materials, methods and processes and for research; also for the selection, training and control of executives, office staffs and operatives; for the development of happy and co-operative labour relations; and for effective marketing organisation.

Wise, humanitarian and patriotic trades union officials, of whom there are many in Australia, can best serve the interests of their members, and of the nation as a whole, by exerting every endeavour to maintain industrial peace, and to educate their members as to the importance of increased application, industry and efficiency.

(Continued on next page)

JASON INVESTMENT CO. (AUSTRALIA) LTD. (Contd.)—

Workers Receive Great Benefits

In some circles, these old-fashioned virtues are regarded as being nothing more than a legacy from the feudalistic days and as being things which operate only for the benefit of the employers. The ranks of individual employers, however, have, under modern industrial necessity, become fewer, and the great majority of industrial operations are now carried out by companies, the ownership of which lies in the hands of a wide spread of individual shareholders, most of whom have relatively small financial interests.

In the final analysis, the major benefits derived from even the largest of our industrial organisations fall to the lot of the workers in those organisations: regular and appropriate remuneration in relation to the services they perform; continuity and security of employment; the maintenance and improvement of the living standards of the people as a whole; and the personal satisfactions which accrue from a worthwhile job well done.

There are many pessimists in our midst. I am not one of them. I believe most sincerely that once the implications of Australia's problems have become recognised by industrialists, by trades union leaders, and by the rank and file of the workers in industry, we shall have gone quite an appreciable distance towards achieving an economy which will place Australia in the forefront of the young nations of the world.

Exchange Rate Speculations

During the last few years rumours regarding the possibility of some change in the exchange rate have beeen frequent, though no such change has taken place since Australia followed sterling down in September, 1949. At different times, it has been suggested in some quarters that the £A should be appreciated in relation to sterling, and at others that, in the interests of maintaining full employment, some devaluation might take place.

Even today, divergent rumours on the subject are still being circulated. For the most part these tend towards a belief that devaluation is more probable than appreciation. Recently these rumours have taken a new turn, and the view has been expressed in some quarters that Australia may remove exchange controls as far as the sterling area is concerned, whilst maintaining a pegged rate in relation to the dollar.

The arguments advanced in support of this view are ingenious but have some cogency. Apparently they are based on the idea that, at some time before the Federal general elections, due about May next, the government may "unpeg" the rate vis-a-vis sterling. If this were done, it is argued, the rate would find its own level and would certainly result in Australian currency becoming cheaper in relation to sterling—in other words that the rate might possibly go out from the present level of £A.125 to, perhaps, £A.140 to the £ sterling.

The effect would be to give Australian manufacturers a greater measure of protection against overseas imports, which would then become dearer in terms of Australian currency. Even at the present time, it is claimed that the "real" rate in respect of many imports from the sterling area is nearer £140 than £125, because it is reported that import licences are changing hands on a basis of around 15 per cent.

If the exchange rate between Australia and other countries in the sterling area were allowed to go free and the Australian £ were to undergo further depreciation in relation to sterling, the ultimate effect would undoubtedly be to raise still further the internal level of costs in this country, thus adding fuel to the fires of inflation. The advocates of "unpegging," however, argue that these effects would take some time to become manifest and that, in the meantime, the Federal elections would be past. It would then be possible to re-institute exchange control and endeavour to readjust the internal cost structure.

It should be emphasised most strongly that all these arguments and contentions are purely of a speculative nature, and may prove to be quite unfounded. They are repeated here only because changes in the exchange rate must inevitably have an important influence on trade and industry and on the Australian economy as a whole. This in turn would be reflected in the investment market — in the early stages in the form of a boom in equity stocks, to be followed later by a period of adjustment.

Trend of Share Market

The assembly of favourable economic factors, satisfacto overseas trade balance and the generally better monetary po tion have not as yet been reflected in the share market. Pri of equity shares have remained firm, but, over the last f months, they have tended to be static, though all the favo able circumstances would, in pre-war days, have stimulated c siderably greater buying activity, accompanied by risi values. For the most part, however, investors have remain quiescent, and the greatest activity has been in respect of t numerous attractive new issues which have recently been bef the public.

Many observers have endeavoured to assess the reasons this lack of activity, which, broadly, may be attributable two main causes. The first of these is that investors as a wh are probably acutely conscious of the implications of Australi high cost structure. A proportion of them, also, appreci the possible effects of overseas competition, which will greatly intensified as a result of the removal of import restr tions.

The second reason is more of a psychological nature. Duri the post-war boom years the ranks of purchasers of equi shares were considerably augmented by the entry into t market of a large number of persons of relatively small mea whose objective was rather market profits than long-term i vestment. After a period of successful operation, some of the people were faced with at least losses on paper during t severe downturn in the market in 1951 and 1952. Consequent their return to the market has been delayed and they a awaiting definite evidence of some continuing upward mo ment in prices.

Nevertheless, the market at present offers many attracti opportunities for sound investment with good security f capital and very satisfactory income returns. These incor returns will certainly appear even more attractive relatively fixed interest stocks if, as expected, interest rates recede in t coming year.

A Vision of the Future

In any case, Australia's national circumstances provi ample grounds for the conviction that investment in the ord nary shares of well-managed companies operating in sou industries furnish prospects of appreciable benefits over moderate term of years. As noted earlier, there are now million more people in this country than there were in 19 and population is still being augmented by natural increase a migration. Quite an appreciable proportion of the new citize who have come here since the war are still in process of esta lishing themselves in a new land. All of them, however, are remunerative employment, and their presence here has great expanded the local market for Australian manufacturers a the field of business for Australian trading houses. In add tion, the provision of facilities and amenities for a largely i creased and steadily increasing population will necessitate t continuance of large public works, which will serve further stimulate trade and industry.

Only recently I read an inspiring statement regarding t future of the United States of America by one of that country greatest industrialists, Mr. David E. Lilienthal, former Chai man of T.V.A. and the Atomic Energy Commission. In h book, "Big Business, A New Era," Mr. Lilienthal said, int alia:—

> We are not, as some say, "at the end of an era." We a at the beginning of an era . . . Our huge chemical industr and our vast industries based upon petroleum are both sti infants, in age and size. Electronics, big as it is, is in kne pants, its future growth and potentialities unlimited. Ele tronic devices for many purposes will become as familiar i the factory, office and home as radio and television sets. Ou production and processing of food, our lumbering and co mining, our shoe and clothing, furniture, fertiliser, textil and pharmaceutical industries have hardly begun to use th advantages of the techniques of large scale enterprise.
>
> The air-cooling of American homes has reached majo proportions, but actually it has hardly begun, measured b

the demand and need; less than 10 per cent. of commercial buildings and an even lesser percentage of factories are equipped to assure this modern minimum of human comfort and business efficiency. Moreover, a whole new world of industrial energy and radiation will come from the peaceful atom.

The disastrous floods of the Missouri Valley are a national disgrace to a country as advanced in water and soil technology as we are. The Missouri can be tamed and put to work if we make up our minds to do the job. Cleaning up the pollution of the rivers of the Atlantic seaboard, ridding the atmosphere over our great cities of noxious fumes, smog and smoke, converting the salty waters of the sea, by economic industrial-sized processes, into potable water for irrigation of arid land are but examples of big jobs for Bigness.

A fantastic transformation can come about if we go at our housing opportunities through Bigness. Our need for many new hospitals and training centres runs into many billions of dollars. The public schools alone have capital needs representing many billions in buildings and equipment. Remaking our highways from coast to coast will be one of the greatest construction undertakings in history. Providing ample modern parking facilities and motor terminals is another giant undertaking urgently needed.

On a smaller, but nonetheless inspiring, scale, what Mr. Lilienthal said regarding the future of America applies equally to the future of Australia. Great tasks and great opportunities lie ahead of this country, and if we will grasp the nettle and set about the solution of our major problems, there is no limit to the expansion of industrial activity which will be encompassed in the lifetime of the average Australian. We should, therefore, look to the future with confidence, and with the determination that each of us in his or her own sphere will give of our best towards the achievement of national greatness.

Lead Concentrates Produced—5,364 tons—assaying: 72.8% (3,906 tons) lead; 39.6 oz. (212,482 oz.) silver; 4.4% zinc.

Zinc Concentrates Produced—5,578 tons—assaying: 0.6% lead; 1.5 oz. silver; 51.2% (2,858 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/7/53 to 14/11/53), compared with the same period last year—

	Lead Concentrate Lead	Lead Concentrate Silver	Zinc Concentrate Zinc
1953 (20 weeks) ..	30,857 tons	1,107,356 oz.	14,781 tons
1952 (20 weeks) ..	18,834 tons	917,169 oz.	13,470 tons

THE ZINC CORPORATION LTD.—

Four weeks ended October 24, 1953.

Ore Treated—44,795 tons—assaying: 16.6% lead; 3.5 oz. silver; 12.0% zinc.

Lead Concentrates Produced—9,501 tons—containing: 6,974 tons recoverable lead; 150,741 oz. silver.

Zinc Concentrates Produced—8,986 tons—assaying: 53.3% (4,762 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/53 to 24/10/53), compared with the same period last year—

	Lead Concentrate Lead	Lead Concentrate Silver	Zinc Concentrate Zinc
1953 (42 weeks) ..	64,968 tons	1,456,934 oz.	48,034 tons
1952 (42 weeks) ..	45,590 tons	1,056,300 oz.	37,601 tons

• Quotation not granted to this class of security.
‡ Stock.
$ For period.

(a) Dividend in arrears.
(b) Including arrears.
(c) To be issued.
(d) Month in **Black** type indicates usual final dividend month.
(e) Dividends subject to statutory deduction of 4/6 in £1.
(f) Sterling, less Malayan Tax.
(g) Pari passu with "A" ords., but qualified voting rights.
(h) Dividends and capital guaranteed by Swiss Company.
(i) Sterling, but subject to British Income Tax.
(j) Preference dividends paid in full.
(k) Special bonus.
(m) Preference as to dividend only.
(n) Return of capital.
(o) Liquidation payment.
(p) Sterling.
(q) Part dividend tax paid.
(r) Including repayments of capital.
(v) No allowance made for tax rebate (if any) in calculating yield.
(x) Shares allotted to English Dunlop Rubber Co. Ltd.
(y) Rank alike with ordinary shares for dividends and in surplus assets on a winding up after repayment of ordinary capital.
(z) Tax paid.
(A) Based on latest accounts and, in the case of holding companies, latest consolidated accounts, when practicable.
(B) Based on last year's dividend, or rate suggested by an altered interim payment.
(C) Redeemable on or before March 25, 1969.
(D) Repayable after February, 1963, on six months' previous notice.
(E) Debenture capital or Unsecured Notes have been issued ranking ahead of share capital.
(F) Includes 33,250 forfeited shares in hands of company.

Trustee for the Debenture Holders:

THE UNION TRUSTEE COMPANY OF AUSTRALIA LTD., 333 Collins St., Melbourne.

Underwriting Brokers:

E. L. & C. BAILLIEU and IAN POTTER & CO.,
Members of The Stock Exchange of Melbourne, 360 Collins Street, Melbourne.

The minimum amount which in the opinion of the Directors must be raised by the issue of Debentures in order to provide the sums required for the matters hereinafter mentioned is £1,500,000. The matters referred to and the estimated amounts required for each are:— (i) The purchase price of any property purchased or to be purchased which is to be defrayed in whole or in part out of the proceeds of the issue is nil but the estimated expenditure necessary for extensions and improvements to buildings and additions to plant machinery and equipment of the business carried on by the Company is £1,450,000. (ii) Preliminary expenses payable by the Company, Nil. Expenses of the issue (including underwriting commission and brokerage amounting to £30,000 payable to the Underwriters in consideration of their agreeing to procure subscriptions for the issue) are estimated to amount to £50,000. (iii) Repayment of any moneys borrowed by the Company in respect of the foregoing matters, Nil, but pending the expenditure of the sum referred to in sub-paragraph (i) above part thereof will from time to time be used in reduction of bank overdraft. (iv) Working Capital, Nil. No amounts are being provided in respect of the matters aforesaid otherwise than out of the proceeds of the issue.

The requirements of the Companies Act 1938 of the State of Victoria have not been fully complied with in this newspaper advertisement of the full Prospectus, which is dated the Eighth day of January 1954 and a copy of which has been filed with the Registrar-General of the said State.

MALLESON STEWART & CO., 46 Queen Street, Melbourne.

UNDERWRITING BROKERS:

IAN POTTER & CO., 360 Collins Street, Melbourne, Members of The Stock Exchange of Melbourne.

OBJECT OF ISSUE AND GENERAL INFORMATION:

The object of the issue is to provide funds for the establishment and operation of a high temperature Cracking Plant for the treatment of Petroleum Oil on a freehold site of approximately 56 acres at Silverwater, near Sydney and with a frontage to the Parramatta River.

Initial production of the plant, which will be the first of its kind in Australia, will consist of the following:—

(a) Crude benzene, toluene and xylene;
(b) Fuel Oil containing highly aromatic petroleum tars;
(c) Residual gas.

The plant will be designed to achieve the Company's objectives and will follow the most up-to-date practice in the United States of America. Negotiations are in progress with one of the principal manufacturers and suppliers in the United States of America of oil gas equipment—The Gas Machinery Company of Cleveland, Ohio—for the provision of the necessary designs and for the supply and fabrication of such items of equipment as cannot be produced locally. It is expected that an agreement will be concluded shortly and that the plant will be in operation by the commencement of 1956, also that in the construction and operation of the plant the Company will have the benefit of close technical co-operation from the American supplier.

On the basis of the estimates of cost of plant and equipment furnished in a report by Mr. K. W. Stookey, the President of The Gas Machinery Company dated 14th October, 1953, and prepared for the purpose of this Prospectus, the Directors are of opinion that the funds proposed to be raised by the issue of shares and by a debenture loan will be adequate to provide a unit of economic size.

To provide for the Company's oil requirements a long-term agreement (20 years) has been made with Bitumen and Oil Refineries (Australia) Limited whereby that Company has contracted to supply, on mutually satisfactory terms, this Company's requirements of oil for processing by its high temperature Cracking Plant to be installed at the plant at Silverwater.

It is not anticipated that there will be any difficulty in disposing of the Company's products. For the initial production the following arrangements have been made:—

Crude BTX.—By agreement with Bitumen and Oil Refineries (Australia) Limited, that Company has contracted to instal at its refinery at Matraville, a plant capable of substantially desulphurising and hydrogenating crude BTX. The resultant product or products will be disposed of under a joint arrangement with Bitumen and Oil Refineries (Australia) Limited.

Fuel Oil.—Bitumen and Oil Refineries (Australia) Limited has agreed that, should Petroleum and Chemical Corporation (Australia) Limited be unable to dispose of the total production of fuel oil, it will purchase from that Company such quantities of fuel oil as it may require for use in furnaces, heaters and boiler houses at its Matraville refinery, and will otherwise use its best endeavours to place orders for sales to other customers.

Oil Gas.—A long-term contract has been made with the Australian Gas Light Company of Sydney, for the sale to that Company of residual gas.

The gases from crude petroleum are rich in ethylene and propylene and these two products, more especially in combination with benzene, form the main raw materials for the petro-chemical industry.

The major field for the use of petro-chemicals lies in the manufacture of plastics, paints, varnishes, lacquers, solvents, drugs and synthetic alcohols and synthetic rubber. The toluene to be produced is regarded by the Commonwealth Government as of great importance to the country's defence needs.

The petro-chemical industry has had a phenomenal growth in the United States during the past few years, and forecasts by American Government authorities indicate an even faster and more extensive expansion in the future.

FINANCIAL PROSPECTS:

The growth of the petro-chemical industry in the United States, also in Great Britain in which country there has been an initial capital outlay exceeding £30,000,000, has encouraged the Directors of the Company in the belief that there are good prospects for the development of the industry in Australia and that, when in production, the Company will be able to provide a satisfactory return to shareholders. At this stage, however, they do not feel justified in making an estimate of the profits likely to be achieved.

STOCK EXCHANGE LISTING:

Application will be made as soon as practicable for the listing of the shares for official quotation on the Stock Exchanges of Melbourne, Sydney, Brisbane, Adelaide, Perth and Hobart.

SHARE REGISTERS:

There will be a Branch Register in Melbourne, and shares will be transferable from the Principal Register in Sydney to the Branch Register and vice versa.

UNDERWRITING AND BROKERAGE:

The whole of the issue of 1,300,000 shares was underwritten by the Underwriting Brokers, Messrs. Ian Potter & Co., for a commission, including brokerage, of 9d. a share.

The Underwriting Brokers took firm 1,100,000 shares, subject to a reservation until 14th December, 1953, of 300,000 shares for application by shareholders of Bitumen and Oil Refineries (Australia) Limited, registered in the books of that Company on 30th November, 1953.

For Information Only

OBJECTS OF THE ISSUE:

T. S. Nettlefold Holdings Limited has been formed to acquire the whole of the issued share capital of T. S. Nettlefold & Sons Proprietary Limited, General Merchants and Distributors. The consideration for the acquisition is the sum of £100,000 which will be satisfied by the issue to the shareholders in the Proprietary Company of 200,000 Ordinary shares of 10/- each fully paid. T. S. Nettlefold & Sons Proprietary Limited will become a wholly owned subsidiary of T. S. Nettlefold Holdings Limited, and will continue to function as the operating company.

The proceeds of the issue will be used to provide additional finance for T. S. Nettlefold & Sons Proprietary Limited, for expansion of operations of that Company.

REPORT BY MR. L. T. NETTLEFOLD, MANAGING DIRECTOR OF T. S. NETTLEFOLD HOLDINGS LIMITED AND OF T. S. NETTLEFOLD & SONS PROPRIETARY LIMITED:

I have pleasure in submitting this report regarding the activities of T. S. Nettlefold & Sons Pty. Ltd., for inclusion in the Prospectus of the issue by T. S. Nettlefold Holdings Ltd., of 100,000 Ordinary shares of 10/- each at par.

Founded as a partnership in 1933 by the present Chairman Directors, Sir Thomas Nettlefold, the business was converted 1938 into T. S. Nettlefold & Sons Pty. Ltd.

In 1950 the Company acquired substantially the whole of assets and undertakings of two associated Companies—Cem Distributors Pty. Ltd., which had been in existence since 1927, En-Tout-Cas (Australia) Pty. Ltd., incorporated in 1933. Th acquisitions brought under the Company's control the market rights in some mainland States for Goliath Portland Cement the Australasian franchise for the construction of the wo famous En-Tout-Cas Tennis Courts.

As general merchants and distributors, the organisation rates a number of valuable agencies on behalf of both overs principals and Australian manufacturers. Products marke cover a wide range, including the following:—

Esse Cookers.—The Company holds the sole franchise, in States except Queensland, for the Slow Combustion Esse H Storage Cooker. It also imports large quantities of Esse R Heaters.

Wellstood and Courtier Cookers.—The Company is the lar Australian importer of these insulated Cookers, which are m by the manufacturers of the Esse Heat Storage Cookers.

Kayen and other Lamps and Radiators.—In association W. Kopsen & Co., of Sydney, the Company manufactures Ka Kerosene Pressure Lamps and Radiators and controls their r keting in the four southern States. It also markets a numbe other kerosene burning appliances as well as maintaining a pr able service department.

Cement.—The Company has a distributing franchise for States of Victoria, South Australia and Queensland, of Gol Brand Portland Cement, manufactured in Tasmania. Present mand in those States is very considerable and appears likel continue for some time ahead.

Tennis Courts.—En-Tout-Cas Hard Lawn Tennis Courts, introduced into Australia twenty years ago, continue to enjoy siderable demand.

Cheka Products.—The range covers steel paving tiles, several types of slotted steel angle for constructional work, sh ing, racking, etc., the market for which continues to grow offers excellent opportunity for development.

Ladders.—A recently acquired agency is for "Gravity" minium Ladders. This is a new product to Australia and one w is likely to be in considerable demand, a market having alr developed in the fruit-picking areas.

Seeds.—The Agency for Anderson's Seeds is held in Vic and South Australia, the main market being in very reliable ga seeds.

Launderoll.—The Company has a partial franchise for L deroll Washing Machines, manufactured in New South Wales.

Concrete Products.—A freehold factory at Fairfield, whic owned and operated by the Company, produces Concrete S Guttering, Fence Posts, etc. These are marketed through bourne head office, and the production plan is sufficiently fle to permit the introduction of new lines as the demand varies

Apart from the above-mentioned lines, there are many sm lines of hardware, etc., marketed in the various States, acco to local demand.

An interest has been acquired recently in a precision neering business, which includes among its activities the man ture of component parts for Kayen Lamps. This appears t to be a profitable adjunct to the business.

As a means of obtaining new agencies for British produc close association is maintained with several buying representa in the United Kingdom. These concerns also act, when neces as local shippers.

Some of the Company's imported lines have, of course, affected by import restrictions, but with the relaxation of restrictions, the trade is once again expanding. In some the Company is confronted with considerable competition, but ing operated actively for a number of years, it enjoys substa goodwill and is able to meet the competition without difficulty

Since 1936, the Melbourne organisation has been cond from freehold premises at 189 King Street. In 1952 the adjo building at 187 King Street was acquired and the two will sh be combined to provide enlarged space for offices, showrooms despatch department. Bulk Storage is handled from premis 100 Yarra Bank Road, South Melbourne, which are held long-term lease from the Lands Department. In addition Company owns a building at 456 Latrobe Street, which is at pr leased, but when the need arises, can be used for further dev ment.

Apart from the Melbourne headquarters, merchandising branches are conducted from rented premises in Sydney, Adelaide and Perth, each being under the control of experienced management.

The present permanent staff of the organisation numbers approximately 80. A Staff Retirement Plan has been in operation for some years and is extended to new permanent employees as they become eligible for membership.

As the Company is engaged almost entirely in marketing, it does not own a great deal of plant other than motor vehicles required both for selling purposes and for installation and servicing of Cookers, etc. A substantial fleet is used in the four States and maintained in good condition.

The future development of the Company is intended to be along existing lines, namely that of specialty marketers of high-quality products, and no opportunity is lost of increasing the range with both Australian made and imported products.

The Directors believe that the Company can continue to make satisfactory profits. Results since the last balance date, 31st March, 1953. have been entirely satisfactory and in the absence of any material change in present trading conditions, the Directors of T. S. Nettlefold Holdings Ltd. expect to be able to recommend annual dividends at a rate of not less than 9 per cent., after adequate provision for reserves.

REPORT BY THE INVESTIGATING ACCOUNTANTS, MESSRS. HANCOCK AND WOODWARD, CHARTERED ACCOUNTANTS (AUST.):

You have informed us that T. S. Nettlefold Holdings Limited is about to be registered in Victoria with an Authorised Capital of £250,000 divided into—

500,000 Ordinary Shares of 10/- each £250,000

T. S. Nettlefold Holdings Limited proposes to acquire all the issued Capital of T. S. Nettlefold & Sons Proprietary Limited for the sum of £100,000, and to satisfy the purchase price by the issue as fully paid of—

200,000 Ordinary Shares of 10/- each £100,000

T. S. Nettlefold Holdings Limited also proposes to issue to the public at par for cash—

100,000 Ordinary Shares of 10/- each £50,000

Paid-up Capital:

When these share transactions have been completed the Paid-up capital of T. S. Nettlefold Holdings Limited will be—

200,000	Ordinary Shares of 10/- each fully paid otherwise than in cash	£100,000
100,000	Ordinary Shares of 10/- each, fully paid in cash	50,000
	Initial Paid-up Capital	£150,000

You have requested us to prepare the requisite certificate for inclusion in the Prospectus of the above issue to the public, which issue you have informed us you have underwritten.

In accordance with your instructions we have investigated the audited accounts of T. S. Nettlefold & Sons Proprietary Limited and those of its Subsidiary Company, En-Tout-Cas (Australia) Proprietary Limited, for the five years ended 31st March, 1953. This is the latest date to which audited accounts have been prepared.

Profit Results:

The Consolidated Adjusted Net Profits of the Company Group are set out hereunder.

In compiling this table we have made such adjustments to the declared Net Profits as, in our opinion, are appropriate, but no allowance has been made for any additional profit which may be earned through the introduction of the proposed new Capital, other than by way of saving of interest payments.

	Year ended 31st March, 1949.	1950.	1951.	1952.	1953.
Adjusted Annual Net Profit of the Companies which comprise the Company Group after eliminating inter-Company dividends, interest of outside shareholders and after calculation for Income Taxation at rates now applicable to Public Companies calculated on the Adjusted Net Profit of each Company, available for Dividends and Reserves	£5,107	£13,544	£31,628	£34,373	£25,124
Percentage available upon Issued Ordinary Capital of £150.000	3.40%	9.03%	21.09%	22.92%	16.75%

Financial Position:

A Summary of the Consolidated Statement of Liabilities and Assets of the new Company, T. S. Nettlefold Holdings Limited, and its Subsidiary and Sub-subsidiary Companies is set out hereunder.

This Statement has been prepared as at 31st March, 1953, to illustrate the financial position that would have been disclosed at that date if—

(1) T. S. Nettlefold Holdings Limited had been incorporated at that date.

(2) The proposed capital issues referred to above had been then effected.

(3) The proceeds of the capital issue to the public had been applied as follows:—

(a) In the increase of Working Capital and in the reduction of Current Liabilities	£47,000
(b) In the payment of the estimated expenses of the new capital issues	3,000
	£50,000

(4) A provision of £12,480 had been raised to meet dividends declared subsequent to 31st March, 1953, out of funds available at that date.

LIABILITIES

(Continued on next page)

T. S. NETTLEFOLD HOLDINGS LTD. (Contd.)—

NET TANGIBLE ASSETS COVER:

The Net Tangible Assets Cover for the Issued Ordinary Capital of the Company may be calculated as follows:—

Current Assets	£289,896	
Fixed Assets	70,506	
		£360,402
Less Current Liabilities	£230,473	
Deferred Liabilities	12,883	
Minority Shareholders	4,090	
		247,446
		£112,956

The Net Tangible Assets Cover for each fully paid Ordinary Share of 10/- is therefore 7/6.

VERIFICATION OF ASSETS AND LIABILITIES:

Current Assets—£289,896:

The existence and values of Current Assets have been verified by us in the usual manner. Inventories of Stock on Hand and Work in Progress have been inspected by us, and, in our opinion, the values adopted have been determined on satisfactory bases. We have satisfied ourselves that the amounts owing by Sundry Debtors are reasonable trade risks and that the Provision for Doubtful Debts is adequate.

Fixed Assets—£70,506:

The items included under this caption are commented upon as follows—

Freehold Property—£17,500.—The property included under this caption in the books of the Company Group is shown at valuation. We have inspected the supporting valuations, amounting to £17,500, dated 16th October, 1950, which were made by Mr. G. B. C. Letts, Sworn Valuer, of the firm of Messrs. Anderson & Hickling, 239 Collins Street, Melbourne. We have inspected mortgage agreements on which an amount of £5,550 is owing and which amount is included under Deferred Liabilities, supra, in respect of this property.

Freehold Property—£14,239.—The properties which together comprise this asset are included in the books of the Company Group at cost.

Leasehold Property—£14,301.—This asset is included in t books of the Company Group at valuation less depreciation a amortization. We have inspected the relevant supporting valu tion, dated 11th February, 1952, by the above Mr. Letts, whi valuation amounts to £15,000.

Office Equipment and Machines, Furniture and Fittings, Mo Vehicles and Plant and Machinery—£24,466.—These items are cluded in the accounts of the Company Group at cost less dep ciation. Over the period covered by our investigation total dep ciation has been charged in the accounts of the Company Gro at rates in excess of those allowed by the Taxation Departm as ordinary deductions from Taxable Income.

Current Liabilities—£230,473:

Deferred Liabilities—£12,883:

We have been assured that all liabilities of the Company Gro as at 31st March, 1953, have been disclosed to us and we ha satisfied ourselves that the Provision for Income Taxation is a quate to cover in full the liability of the Company Group for come Taxes on profits earned to 31st March, 1953.

(The valuations referred to in the above Report were not p pared for the purpose of incorporation in the Prospectus.)

DIVIDENDS:

The shares of this issue will rank for dividend as from date of the Company's incorporation (4th December, 1953), equa with the shares allotted to the vendors.

The Directors expect, in the absence of any material change present trading conditions, to be able to recommend dividends a rate of not less than 9 per cent. per annum.

STOCK EXCHANGE LISTING:

Application will be made as soon as practicable for quotat of all issued shares of the Company on The Stock Exchange Melbourne.

UNDERWRITING AND BROKERAGE:

The whole of the issue was underwritten and taken firm Messrs. Ian Potter & Co., Members of The Stock Exchange of M bourne, for an underwriting commission (including brokerage) fourpence halfpenny per share.

For Information Only

This Statement of Extracts from the Prospectus of November 13, 1953, is for information only. The issue has closed.

PROSPECTUS

of

New England Antimony Mines

No Liability

(Incorporated in the State of Victoria under Part II of the Companies Act, 1938, of Victoria on the Twenty-sixth Day of November, 1953.)

AUTHORISED CAPITAL: £250,000 in 1,000,000 Shares of 5/- each.

400,000	Contributing Shares are now offered for public subscription payable 1/6 per share on application and the balance by calls as and when required (1,500 of these shares have been taken by the subscribers.)	£100,000
65,000	Shares are to be issued as fully paid to 5/- each to Victorian Antimony Mines Limited	16,250
535,000	Shares are to be held in reserve	133,750
1,000,000		£250,000

Of the 400,000 Contributing Shares offered for public subscription 100,000 Shares have been reserved for subscription by shareholders of Victorian Antimony Mines Limited.

As these Shares are issued under the "No Liability" provisions of the Victorian Companies Act, shareholders at any time not desiring to proceed further are not liable to pay further calls.

DIRECTORS:

ARTHUR HOWARD PRICHARD MOLINE, Mining Engineer, "Mayfair," Marne Street, South Yarra, Melbourne, Victoria.
FRANK ARCHBALD CLOSE, Engineer, China Tree Estate, "Comboyne," New South Wales.
GUY LINDON DITCHBURNE, Metallurgical Engineer, 51 Aroona Road, Caulfield, Melbourne, Victoria.
JAMES WALLACE ILLINGWORTH, Company Secretary, 450 Collins Street, Melbourne, Victoria.
ERIC ROBERTS JEFFERY, Sharebroker, 422 Little Collins Street, Melbourne, Victoria.

LEGAL MANAGER AND REGISTERED OFFICE:

K. W. CRAIG (A. R. Bruhn & Co.), 450 Collins Street, Melbourne, Victoria.

BANKERS:

THE ENGLISH, SCOTTISH AND AUSTRALIAN BANK LIMIT
388 Collins Street, Melbourne, Victoria.

SOLICITORS:

ARTHUR PHILLIPS & JUST, 472 Bourke Street, Melbourne, V toria.

AUDITOR:

RUSSELL HENRY, of the firm of Flack & Flack, Charte Accountants (Australia), 128 William Street, Melbourne, V toria.

UNDERWRITING BROKERS:

WALLACE H. SMITH & CO., 361 Collins Street, Melbourne.
ERIC R. JEFFERY, 422 Little Collins Street, Melbourne.
LEONARD G. MAY, 422 Little Collins Street, Melbourne
(Members of The Stock Exchange of Melbourne).

OBJECTS OF THE COMPANY.

The Company is being formed for mining purposes genera and in particular to acquire from Victorian Antimony Mi Limited the Option of Purchase dated 1st January, 1953, which holds from Henry Sylvester Maguire over the Magword Antim Mine, belonging to him, in the Armidale district of New So Wales.

It is intended that the Purchase Option will be exercised fo with and a treatment plant for the production of antimony c centrates installed, and active mining and treatment operati thereafter carried on.

PROPOSALS.

The initial steps will include construction of a road from main Guyra-Ebor road to the Mine, erection of sufficient hous and engagement of a small team of men to develop the Mine a

the same time, win ore of a grade high enough to be immediately leable to the smelters in Sydney.

Simultaneously, a flotation treatment plant for the production high grade antimony concentrates will be fabricated and assembled in Sydney, and thereafter transferred and erected at the ine.

The flotation concentrates produced should be readily saleable, d it is anticipated that the Australian market will consume the ilk of the production. Magword ore is regarded as one of the ghest grade antimony ores in Australia and is singularly free om impurities.

The mining and treatment processes envisaged are simple and ell proven and involve no difficult metallurgical problems.

It is estimated that the capital subscribed will be utilised as llows:—

Payment to Vendors—		
H. S. Maguire	£28,000	
Victorian Antimony Mines Limited	7,500	
		£35,500
Plant and Buildings, etc.—		
Mining Plant, Power and Air Supplies and Treatment Plant	38,000	
Housing	15,000	
Transport	3,000	
		56,000
Preliminary Expenses (including Brokerage)		4,000
Working Capital		4,500
		£100,000

The foregoing estimates of capital expenditure have been prered by Mr. Frank A. Close. They have been subjected to check Messrs. A. H. P. Moline and G. L. Ditchburne.

PROSPECTS.

The ore body is reported as being substantial and contains ich high grade material. There is every probability that further serves of ore will be proved in the lode at present being worked d quite possibly in parallel lodes which outcrop at the surface t which have not been developed.

To commence with it is proposed to mine 400 tons of material r month. With dilution, a grade of 20% antimony is anticipated m stopes not less than 3 feet wide.

PROFIT ESTIMATES.

By letter dated 17th November, 1953 (prepared for inclusion in 's Prospectus) Mr. Frank A. Close has given the following profit imates. These estimates have been subjected to check by Messrs. H. P. Moline and G. L. Ditchburne.

For the purpose of inclusion in the Prospectus of the Company ut to be issued in connection with the issue of 400,000 Conbuting Shares of the Company the following is my estimate of profit which should be derived by the Company on the basis of proposal to mine 400 tons of material per month. My estimate based on a grade of 20% Antimony.

400 tons of 20% antimony x 90% recovery = 120 tons of 60% concentrates per month @ 30/- per unit = per month		£10,800
Less Costs per month:		
16 men @ £25 per week	£1,600	
Oil, Fracture and Stores @ £250 per week	1,000	
Freight and handling of Concentrates	1,000	
Overheads	500	
Contingencies	500	
		4,600
Estimated Net Profit per month, before Taxation		£6,200

It is expected by the Directors that the above proposals are eable of achievement and will enable the Mine to be placed on a l-scale working basis during the latter part of 1954.

MARKET SURVEY.

At the present time Australian industry absorbs about 1,400 s of concentrate per annum and the demand is increasing. The al or its compounds are used in battery plates, type metal and er alloys, also an as ingredient of paint, and for stove enamels well as, to a small extent, in the manufacture of matches.

REPORT BY JOHN F. MILLER, B.C.E., B.M.E., A.M.I.E. (Aust.), dated September 18, 1953.

(Prepared for inclusion in the Prospectus.)

UATION:

The Magword Mine is situated on the western slope of Kanoo Creek, a tributary of the Aberfoyle River. The leases are L 1, Parish Rampsbeck, and ML 9, Parish Allingham, County ke.

Access to the Mine is from the Dorrigo Guyra Highway, the e road turning off NNE at the 29 mile peg from Guyra. Guyra, closest rail head, is 380 miles from Sydney.

The Mine road is 6½ miles in length, 4½ miles has reasonable rles, but needs repair. The last two miles are very steep and el re-aligning. A road has been surveyed with a maximum rle of one in ten to replace the present road.

FACE EQUIPMENT:

The surface plant is located near the top of the main shaft. pressed air is supplied by a two stage Consolidated Pneumatic Type Compressor, 160 cubic ft. capacity, driven by a 40 h.p. hern Cross diesel engine. The water supply is obtained from garoo Creek. A 5 h.p. Lister engine and 3 in. pump lifts the r 400 feet to the adit entrance, a booster lifts the water another 200 feet to a storage tank at the Main Shaft Level. Other equipment is not of great value and consists of 6 in. x 4 in. Parker & Lacy Jaw Breaker, power winch, some rails and piping and a few drills, tools, etc.

UNDERGROUND WORKINGS:

The property has been developed in an unusual manner. A shaft 8 ft. x 3 ft. has been sunk following the ore, which is nearly but not quite vertical, to a depth of 203 feet, and at this point the shaft joins an adit level nearly 500 feet in length, the bottom of the shaft being about 280 feet from the mouth of the adit.

From the shaft, six short levels have been opened up at intervals, in all of which antimony was found, a marked improvement being shown at a depth of 140 feet. This improvement is fully maintained in the adit which, for a length of 235 feet, traverses good grade ore. Below the adit, a winze has been sunk 40 feet in good ore all the way. A diagrammatic longitudinal section appears elsewhere which shows the position more clearly than would be done by further description.

ORE RESERVES:

It is not possible to make an accurate calculation of the tonnage of ore in reserve, but at a conservative estimate, there are 7,500 tons of ore of an average value of 20% antimony. The gross value of this, at the present price, is £225,000.

In addition, there is in surface dumps and broken material used as stope filling 3,500 tons assaying 7% antimony—gross value being about £35,000, making a total of £260,000.

There are two other lodes showing on the surface more or less parallel to the main lode and within 30 or 40 feet of it. In one of these, 3 inches of antimony sulphide has been found and on the other a shaft 30 feet in depth was sunk. This shaft has been filled, but it is stated that an irregular occurrence of antimony sulphide was found in places up to 12 inches in width.

In view of the marked improvement in the main lode at the lower levels, it is reasonable to expect that prospecting these subsidiary lodes at the adit level should make a useful addition to ore reserves.

THE VEIN SYSTEM AND ORE SHOOTS:

Country rock in the Mine area is mainly slates and greywackes; these sediments are folded and somewhat sheared.

The lode is a normal fault type lode, the walls being fault rock. The lode zone near the surface has a width of about four feet and dips at 80°, at 140 ft. down the shaft the zone is vertical and widened to 12 feet. At the 200 ft. level the zone is still 12 feet wide but has a reversed dip of 85°. The greatest width of prill ore showing is at the 140 ft. and 203 ft. levels coinciding with the maximum width of the fracture zone.

The veins are simple fissure fillings and are mainly quartz, calcite and stibnite. A small amount of iron pyrites is associated with the quartz.

Analysis of the Magword ore shows that it is particularly free of deleterious impurities. Only traces of arsenic, silver or gold have been recorded in bulk consignments of ore.

CONDITIONS AFFECTING MINING:

1. Suitable timber is available in the immediate vicinity of the Mine.
2. Water is available from Kangaroo Creek, and it is understood that even in dry times there is a plentiful supply.
3. Mining should present little difficulty. The ore body is almost vertical with fairly well defined walls, and the ore is relatively soft and easily drilled. Normal cut and fill mining methods would probably be most suitable.
4. The present main shaft is not suitable for raising ore, and it is considered that a haulage way down the hillside would be the best method of getting the ore to the plant site.
5. The present 6½ mile road needs to be re-aligned so as to make an all-weather access road.
6. In order to attract labour, it will be necessary to provide housing and reasonable amenities.

CONCLUSION:

There appears to be sufficient ore in sight to return the capital investment together with an appreciable surplus. The real attraction of the venture, however, is the definite probability that below the lowest working level there is as much or more ore than there is in sight above that level. This ore, if proved to exist, is easily accessible by means of a low level adit.

TAXATION.

Calls paid on the Company's shares will be allowable deductions under the Federal Income Tax Legislation as to one-third of the total amount paid.

Section 23A of the Commonwealth Income Tax and Social Services Contribution Assessment Act provides that twenty per cent. of taxable income earned from the mining of certain metals, including antimony, shall be exempt from taxation. Dividends paid out of such exempt income are also exempt from taxation in the hands of shareholders.

CALLS.

A first call of 1/- per share will be made payable on 13th January, 1954. Thereafter calls will be made at a rate and at intervals dependent upon plant installation progress.

STOCK EXCHANGE LISTING.

Application will be made as soon as practicable after allotment for the official quotation of the Company's shares on the Stock Exchanges of Melbourne and Sydney.

UNDERWRITING AND BROKERAGE.

The whole of the issue has been underwritten by Messrs. Wallace H. Smith & Co., Eric R. Jeffery and Leonard G. May, Members of The Stock Exchange of Melbourne, for a commission (including brokerage) of 1½d. per share. Each of the Underwriters has taken firm 100,000 shares of the issue.

A. G. Healing Ltd.

Wholesale Distributors of Automotive Spare Parts, Cycle and Radio Goods, etc.

Reg. Office: 167 Franklin St., Melb. **'Phone:** F 0281. **Directors:** K. G. Healing (Chairman), V. R. Powell (Manag. Director), G. T. Atkinson, B. A. Kritz. **Auditors:** E. Holmes; A. B. Kaines.

42nd Year ended June 30, 1953. Meeting November 5, 1953.

Sales volume fell from over £6 million to approximately £5¼ million, but improved steadily after February, 1953. Profit was almost £60,000 lower at £139,471, but ordinary dividend was held at 15% on increased capital.

In addition to its principal function as a wholesaler, the organisation manufactures a number of essential automotive products.

Warehouses (all freeholds) are located in Melbourne, Sydney, Brisbane, Adelaide and Launceston while branches also operate in Melbourne suburbs, Victorian country centres and Albury.

The group's own manufactures extend to bicycles, "Golden Voice" radios, Thor washing machines, vacuum cleaners, batteries, Gabriel tubular shock absorbers and small tools. Other lines handled include bicycle and motor spares and accessories, garage equipment, paints, electro and chrome plating equipment, industrial chemicals. The Melbourne, Sydney and Launceston branches handle the genuine parts franchise for General Motors-Holdens and the Adelaide and Brisbane branches handle the genuine parts franchise for International Harvester Company.

Net tangible asset backing (book values in consolidat balance-sheet)—£15/3/8 for the £1 preferences; 13/2 for t 5/- ordinaries. The 8% and 6% £1 cumulative preferences ra pari passu for their respective dividends and for capital. T employee shares rank after the preference, but before ordina shares for capital, and carry rights to a 3% cumulative di dend and full participation with ordinaries.

The following address by the Chairman, Mr. K. G. Healing, was circulated to shareholders with the Annual Accounts:—

Shareholders' funds as shown by the Consolidated Balance Sheet now stand at £1,905,367, an increase of £339,197 during the last financial year.

Current assets have been reduced by £443,671, mainly due to your Directors' policy of reducing Stocks, which are down by £473,829, representing a drop of about 20% since last year. This, combined with the recent increase in Capital, is reflected in substantial reductions being made in Current Liabilities. The Bank Overdraft is down by £316,808, Sundry Creditors by £174,887, Provision for Taxation by £202,868 and Loans by £38,868. As a result the Company's Working Capital has improved by £247,512.

Assets Backing for the Preference Shares is now £15/3/7 each and for the 5/- Ordinary Shares 13/2 each.

Last Year's Trading

As pointed out in the last financial report, business for the last quarter of that year was difficult.

This trend continued, unfortunately, until about February of 1953 and up to that date little, if any, profit was earned.

Sales volume had commenced to lift about that period, howev which buoyant movement has since continued steadily and, in vi of the commonsense Budget just presented by the Federal Gove ment, would appear likely to remain so.

Sales volume, however, fell to around 5¼ million for the trad year 1952/53, and to confuse matters even more, basic wage creases continue to beset us to the tune of a further 8/-.

In the face of this extremely difficult state of affairs your Dir tors feel they have every reason to be satisfied with the trad results, as the dividend rate, staff superannuation and staff bonu were maintained, and a small transfer to reserves, £12,609, v made.

Forecast for 1953/54

Sales volume for the first four months of this financial year good, and compares more than favourably with the trading y 1951/52, which was an outstanding year. This trend is evident all States, and there is no reason to suspect that it will do a thing but continue, in view of our last year's planning commenc to show fruition. In addition, there has been an apprecia easing of the import restrictions enabling us to draw suppl more freely from overseas principals on valuable agency lin

rthermore, there has been a great improvement in the availility of automotive spare parts from the local market.

(a) Thor Washing Machine production has been increasing eadily since June, and will reach its peak about November. The ailability of this line will add materially to sales volume and ofit earning.

(b) Radio and Cycles.—While statistical figures prepared by e Commonwealth Statistician show a downward trend generally these two items, it is very pleasing to note:

(i) A steady increase in Healing cycle sales.

(ii) An all-time record production in Healing receiving sets, evident on a national basis.

This trend is extremely pleasing and justifies the confidence of ur Directors in respect to the Company's technical designing and oduction planning.

By advertising we have firmly established the Company's oducts on the Australian market. The form of publicity used by ur Company on the air in periodicals and in the daily press, has en very favourably commented upon. This applies particularly ith respect to the constructive press publicity developed in connction with the National Road Safety Council, and with respect the correct use of traffic hand signals by juveniles.

Another encouraging factor with respect to these Healing franise lines is the steadily increasing number of authorised Healing aler appointments throughout the Commonwealth.

(c) General Motors Parts Distribution is proceeding very satisctorily and has been largely responsible for the steady increase our automotive parts sales.

(d) Alemite Greasing and Allied Service Equipment.—A most tisfactory franchise has been developed in this regard with the pac Company of Adelaide for an almost national franchise on this ne.

In view of the very great interest shown by the petrol comnies in service stations, and the strengthening of their status d numbers over the last few months, this franchise is regarded a most valuable one, which will greatly stimulate your Comny's trading position.

(e) Launceston Branch, under the control of Mr. Charles J. vine, has been successfully opened, and will greatly strengthen e Company's prestige in Tasmania, where it already holds a numr of extremely valuable franchises.

(f) Newcastle (N.S.W.) Branch.—A very desirable property in picked position in Newcastle has been purchased, and every fort is being made by your Directors to get possession. The sults of this litigation should be known by the end of this lendar year.

(g) Brisbane Branch.—Sales volume in this young section of e Company's activities continues to show a highly satisfactory end.

(h) Shepparton.—A freehold has been purchased in Shepparton. ur Directors have been watching the steady growth of this strict for some time, and did not let the opportunity of consolition slip by. Very great progress is expected from this trading ea.

(i) Bendigo.—Your Company has been established here for some nsiderable time but only in a small leasehold. A satisfactory eehold has now been obtained, and rebuilding both here and at epparton will commence within a short period.

(j) Suburban Trading Trend.—City congestion and parking oblems are besetting experts in most major cities in the world day, Australian cities being no exception, and, whereas in the st, our thoughts turned to rural branches, they must now be ected along the lines of suburban branches.

Our first moves along these lines will be the opening of a nch at Box Hill shortly, and later at Dandenong where the rchase of a valuable freehold was recently made.

These moves will enable your Directors to check the possibilis and determine future policy.

Until the suburban experiment clarifies itself, it is not proposed seek freeholds. This is a logical move only at a later date, the experience so gained will be used also to test the position Sydney in the near future.

(k) Subsidiary Companies.—The first step in the retail marketof our electrical household lines has been taken in South stralia and Healing's Pty. Ltd. has been launched, with very d business premises, in Rundle Street, Adelaide.

Frigidaire Refrigerators have been added as a metropolitan nchise in Adelaide, and splendid results have been obtained m this line in the short trading period in which we have handled se.

Healing's Pty. Ltd., Swanston Street, have extended in Melrne to Howey Court (Collins Street) and Barkly Street, Footsry, and both of these projects have proved financially successful.

I would again point out the tremendous burden carried by your nior executive and engineering staff in the successful organising r launching of all these projects.

Dividend on Ordinary Shares

The Company has invariably paid the Dividend on its Ordinary ares once a year, but your Directors have decided to pay Inm Dividends on Ordinary Shares in future. This will necessite an alteration in the Dividend date and Interim Dividends on dinary Shares will be paid in July and Final Dividends in nuary. For the last financial year the full year's Dividend will paid in November. Preference Dividends will continue to be in February and August.

We feel sure our shareholders will welcome this decision, which should firm the value of the Shares and overcome some of the fluctuations in prices.

Basic Wage

Any attack on the present standard of the basic wage could be almost construed as a national calamity, but it would seem that the Court has made a wise decision which must stabilise and finally commence a downward trend in the cost of living. It is to be hoped that certain selfish sections will not agitate for a return to the old system of automatic increases until the effects of the latest decision given have a chance to clarify themselves.

Television

It is with great regret that your Directors advise that they cannot make a clear announcement on what must inevitably become a great national asset. It is to be hoped that the Federal Government will have enough courage and foresight to very quickly produce Television from its pigeon-hole and let the people of this country have, without political interference, that to which they are justly entitled. (Need I take them back 1,000 years in history to King Canute?)

Every other nation of any standing in the free world, and many of the defeated nations, to-day have this remarkable form of entertainment which has reinstated home life.

Are we, in this country, so backward in mentality as to need commissions to decide our own tastes and thinking for us? However, rest assured that, when the Federal Government does make its announcement, your Company will have its arrangements made for a technical tie-up overseas with one of the world leaders, and will be amongst the first to manufacture and merchandise in Australia.

W. W. Devling, Esq.

It is with great regret that we announce the retirement of our Adelaide Manager and Company Director, Mr. W. W. Devling. Commencing with the Company as a traveller, Mr. Devling went to Adelaide in 1916 to take charge of a very small warehouse. To-day he leaves a thriving business, held in the highest regard by all who come in contact with it, while his personal prestige ranks just as high with friends and competitors alike. His retirement from the Board of Directors was automatically due this year and he does not seek re-election. Mr. Devling leaves your Company, I am sure, with the best wishes of employees and shareholders alike.

Thanks to Staff

I would be remiss if I did not make special mention of the loyalty, initiative, interest and enthusiasm shown by our employees throughout its various warehouses, manufacturing plants and service workshops. These are factors beyond value in the continued progress of our Company and the directorate are proud to control the affairs of an organisation in which such happy relationships exist.

Thanks to Clients

Similarly, I desire to convey a measure of thanks to our clients and friends. Our organisation could not have possibly achieved the important position that it enjoys to-day if it had not, in its 57 years of trading, made innumerable friends, and it is a matter for some satisfaction and pride to your Directorate that it is able to list among present clients many with whom we have been happily associated for 40 years and more—some since the very inception of the Company.

A. H. Gibson Industries Ltd.

Holding Company in Electrical and Radio Merchants, and Manufacturers.

Reg. Office: 23 Hardware St., Melb. **'Phone:** MU 8121. **Directors:** A. H. L. Gibson (Chairman), F. J. Yourelle, C. W. Bryant, J. Ogilvy. **Auditors:** M. R. M. Smith, Peacock & Henshaw.

Year ended July 31, 1953. Meeting November 2, 1953.

Trading conditions were difficult, and profit was 40% less than last year at £11,964, the lowest since the incorporation of the company in 1949. After payment of preference dividends, the return on the ordinary shares was 8.2%, out of which an unchanged dividend of 7½% was paid.

In his address, herewith, the Chairman reports that since balance date the tone of business has been more active.

The following comments were made by the Chairman, Mr. A. H. L. Gibson, at the Annual Meeting of shareholders held on November 2:

After making provision for depreciation and for other contingencies, and providing from the year's total profits the sum of £8,057 for taxation, a surplus of £12,688 has resulted.

Whilst this result is the lowest recorded since your company was incorporated in 1949, the Directors—with full working knowledge of events and conditions during the year under review—are not altogether dissatisfied with what has been achieved, and I will briefly touch on some of these factors in due course.

Directors have recommended a final dividend of 3¾% on ordinary shares, which, together with interim dividend of 3¾% already paid, makes a steady total dividend of 7½%.

They have also recommended a final dividend of 2½% on preference shares, which, together with interim dividend already paid, makes the normal total dividend of 5% in this class of shares. These dividends amount to £11,077, leaving a balance at credit of Profit and Loss Appropriation Account of £51,046 compared with £49,435 brought in.

Whilst this is a comparatively small addition to the Company's reserves, it is in line with the consistent sound policy of maintenance of steady yearly dividends—whilst adding proportionately more heavily to reserves in the fat years to balance such actions as the foregoing in a lean year.

Reduction of Stocks.

One of the most important and pleasing aspects of the accounts is the increased liquidity of our finances by the reduction of stocks by £62,396 from £287,039 to £224,643, which reflects in a reduction of bank overdraft from £95,291 to £64,272, and it is anticipated that further reductions will occur during the current year's trading.

Whilst trade debtors have increased slightly, they are not out of balance with trade creditors.

With the exception of fixed asset items which have increased in total from £61,590 to £68,724—largely due to increases and renewals in the Company's fleet of vehicles for increased outside sales activity—there is little significant change in other Balance Sheet items.

Trading Conditions.

Twelve months ago I spoke of the difficulties the Company was then encountering in readjustments from the boom years up to the end of 1951, and informed shareholders that these—whilst being gradually overcome—would extend through the year under rev

In fact, trading conditions in the majority of those field which the Company is mainly operating have, in general, durir large part of the trading year, been sluggish. In addition, a siderable amount of reorganisation and staff changes have necessary to meet the "return to normality."

All these factors have resulted in somewhat lower turno than anticipated, resulting in small trading losses in two of Company's interstate subsidiaries, and a harder fight for profit the remaining subsidiary companies.

A very satisfactory feature of the year's operations has the profitable activities of our manufacturing subsidiary. W this activity as yet is minor in comparison with our trading ac ties, it is showing a steady and profitable advance in its which augurs well for its future.

In effect, during the year, despite difficult trading condit very much has been achieved both in reducing excessive stocks in reorganisation of merchandising activities to meet more petitive conditions, and I have no hesitation in stating to sh holders that whilst profits have indeed been lower, they are from unsatisfactory considering the important results which been achieved within the internal structure of the Company.

Current Year.

I can report to you that today there is a very healthy s of quiet confidence and sales resolution existing amongst ex tives and staffs of the various subsidiary companies which prise the group. In addition, since the announcement of its Bu by the Government of the day, a more active "tone" has been in practically all fields in which the Company operates.

I will resist the ever-present temptation (on an occasion as this) to point out the dangers and pitfalls which continu threaten our national economy. I confine myself to a contin expression of faith in the future of this country, and in this pany's place within it. I feel we can face the current year's ing with modest confidence and anticipation of improvement the year just past.

Staff.

Shareholders can rest assured that the managers and sta all branches and subsidiaries are keenly interested in the pr and future progress of the Company, and I am sure that I your full support in expressing appreciation and thanks for loyalty and furtherance of the Company's interests in the year past.

5th Year ended June 30, 1953. Meeting November 10, 1953.

Sales were slightly lower than in the previous year, but improved in the latter six months. After a lower depreciation charge, profit was £18,000 higher at £188,458.

After payment of preference dividends, return on ordinary capital was 14.5%, out of which an ordinary dividend of 8%, plus tax paid bonus of 1%, was paid on increased capital.

In his address to shareholders at the Annual Meeting held on November 10, the Acting Chairman, Mr. R. L. Michaelis, said:—

It is my privilege, on behalf of the Board, to report on another year's trading, which I believe can be taken as satisfactory.

Before discussing the financial affairs of the company, I feel, however, that I should refer to the loss the company has sustained in the death of one of your Directors, the late Mr. Alan Michaelis. Brief reference has been made to this in the formal Directors' Report attached to the Accounts, but I should like to add that, apart from the company's loss through his wide experience of its affairs, his death will be felt by many in all walks of life, as wherever he was known, he was universally liked and respected.

To fill the vacancy, your Directors have appointed Mr. Albert Hallenstein as a member of the Board. He has for many years been a senior executive officer and, latterly, a Director of your oldest subsidiary, Michaelis, Hallenstein & Co. Pty. Ltd., and it may interest some of you to know that he is a grandson of the founder of that business. I am quite sure that his knowledge and energy will be a distinct acquisition. As he was appointed by the Board, he becomes one of the Directors to retire, and he will therefore come up at this meeting for re-election, with Mr. C. H. Dodds, who retires by rotation.

Subsidiary Losses.

Taking the company as a whole, your Board considers that the results have been satisfactory, although again two Subsidiaries have shown a loss. I feel that it would be unreasonable to expect, in a company such as ours, that losses should not be incurred by various of our subsidiaries from time to time, but the Board takes a serious view of these losses, and is using every endeavour to put the concerns in question on a paying basis. In the case of one of the companies, a former senior employee in Brisbane has been convicted in connection with the theft of a large quantity of the company's stocks.

Control of Hides.

Last year it was stated that your Board was very much concerned about the maintenance of Government control of hides, and to the regret of the company, the same conditions still continue. The belief that a return to a free market would be in the best interests of the country is now shared, not only by a large majority of tanners, but by the majority of those in other sections of the leather trade, and should be accepted by all who favour private enterprise as opposed to socialistic control.

The fear expressed in certain quarters that discontinuance hide controls would lead to an increase in the cost of living ind is not shared by the Board of your company, as it feels that world prices remain stable, greater freedom would allow mo efficient methods to be introduced, and so offset any slight r that might be expected on theoretical grounds.

Improved Turnover.

In the interim report that was issued on trading to the end December, it was stated that turnover for the six months w lower than for the corresponding period of the previous ye However, during the last six months of the year under revie there was a considerable improvement in sales, and while the sa for the year as a whole did not overtake those of the previc year, they did not fall very far short. Despite the considera lag in trading while the Budget was awaited in the early part the year now current, I am happy to say that the improving t dency of sales of your company has been maintained, and sa to the end of September show a satisfactory increase over th for the same three months last year, although still below t same quarter's sales for the previous year. The export trade c tinues good, and the company's products have maintained th high reputation in many oversea countries.

During the year one of your subsidiaries, Michaelis, Hall stein & Co. Pty. Ltd., opened a branch in Tasmania, and y Directors are confident that this extension of the compan activities in that State will prove most beneficial.

Accounts.

The profit for the year for Associated Leathers Ltd. w £128,962, an increase of £23,271. As mentioned in previous yea however, this figure bears no direct relation to the profits of company as a whole, but is based on the dividends paid to it your subsidiaries.

Your Directors have been able to recommend a dividend of on preference stock, and on ordinary stock an 8% dividend and 1% tax paid bonus, which is the same total dividend rate as l year, when, however, 5% was paid tax free. The amount of di dend is greater, as the new stock issued last year carries a f year's dividend, instead of a pro rata amount for two mont With the payment of the 1% tax paid bonus this year, the c firmed tax paid reserves held by your company are virtually hausted.

If you will now turn to the consolidated accounts ,which give real picture of the Group's results for the year, you will note t there is an increase in the consolidated profit available to r company of £8,575, after providing for taxation at pre-dget rates. The saving due to the Budget, amounting to some ,000, will be dealt with by the Directors when considering the ounts of the current year, probably by way of addition to Re-ves.

Your Directors again considered it essential to retain a sub-ntial proportion of the profits to provide additional strength the company, and the amount retained this year represents ut 37% of the year's profits and, with other adjustments, brings total net reserves, including amounts carried forward, to 0,566.

You will note that provision for depreciation at £37,268 is stantially less than the amount provided last year. Your Direc-s have always taken full advantage of depreciaion allowable taxation purposes, and last year were able to claim special wances of 40% on new plant. The amount provided this year, although considerably less, still represents an overall rate of about 11% on plant and similar assets.

In the Consolidated Balance Sheet you will note that the minority shareholding has been eliminated, these shares having been purchased by your company, so that all subsidiary companies are once more wholly owned by Associated Leathers Ltd.

Fixed assets have increased by £100,986, before allowing for depreciation. This is mainly accounted for by purchase of new plant required to keep abreast of latest developments. The bulk of the balance is in freehold properties, and includes the purchase of a property by the Tasmanian branch, to which I referred earlier.

Staff.

Before closing, I would like to express the Board's appreciation of the work done by the staffs of our various subsidiaries. We feel that, both in our merchandising and manufacturing activities, the loyalty and efficiency of our staffs is considerably above the average, and it is the fixed policy of your Board to endeavour to ensure that this happy state of affairs continues.

he Company's chartered tankers transport petroleum pro-s to Australia from refineries abroad. The Company's own tanker was launched on June 30 and was due for delivery ecember. Capacity is 5 million gallons of petroleum ucts.

Iarketing now covers all States except Western Australia, storage capacity now exceeds 21 million gallons.

s from January 1, 1954, lubricating oil will be handled in storage tanks having been erected in Sydney and Mel-ne, each of 1,600 tons capacity.

o protect its share of the Australasian retail market, the pany has acquired and erected a number of service stations, totalling 75.

uring the year, the Company introduced a rust inhibitor petrol, power kerosene and distillate, and sales improved result.

ith the formation of Ampol Exploration Ltd., early in the oil search activities of Ampol Petroleum Ltd. were ated from the Company's marketing activities. The of Ampol Petroleum Ltd.'s shareholdings in the operat-company, West Australian Petroleum Pty. Ltd., were ferred to Ampol Exploration Ltd. in exchange for 000 5/- shares as fully paid. These constitute 70% of aid capital of West Australian Petroleum. Ampol had ously passed over to West Australian Petroleum its per-to explore, and the results of work carried out in associa-with California Texas Corpn. during the previous 5 years. lifornia Texas Oil Co. holds an 80% interest in West alian Petroleum Ltd. and the balance is held by Ampol ration Ltd.

illing for oil commenced on September 5 at a site in ough Range 15 miles south of Learmouth on Exmouth Gulf, W.A. Equipment in use is capable of drilling to 20,000 feet.

On December 4 the Exploration Co. reported as follows:—

"The drilling company has discovered waxy petroleum. We have proved the existence of petroleum in Western Australia, but it is still too early to evaluate the future. Oil was found in a thin zone of production with only 17 ft. of sand."

In addressing the Annual Meeting of shareholders on October 29, the Chairman, Mr. G. Robinson, said:

Since we last met the death of Sir Walter Massy-Greene has deprived us of the valuable services of our esteemed colleague who had been a member of the Board since 1933. Mr. S. B. Holder was appointed to fill the vacancy.

Profit

After providing £36,663 for depreciation of buildings, plant and equipment the nett profit for the year was £65,113 out of which the sum of £27,000 has been transferred to General Reserve. After payment of dividends referred to later the balance carried forward in the Profit and Loss Appropriation Account is £10,210 as against £10,515 brought in from last year.

In the previous year the operations resulted in a loss of £87,502 due to the severe recession in the textile trade and the heavy fall in the value of basic raw materials, consequently it is not necessary to make any provision for income tax on this occasion. Trading conditions continued to be difficult in the early part of this financial year but as mentioned by me at the Annual Meeting in October last year signs of improvement were showing in certain sections of the trade. I then expressed the hope that these would become more pronounced early in the new year. I am glad to say that a much more healthy tone soon developed in the trade and that in consequence of the improved demand for our goods production was gradually built up to normal in all departments.

Dividends

A dividend of 6% on ordinary stock was paid on 22nd October, 1953 and dividends totalling 7½% on preference stock were paid in April and October.

In future dividends on ordinary stock will be paid annually.

Net Current Assets

The net current assets at £419,098 on July 31, 1953 are higher than last year's figure by an amount of £42,583. The more important movements in the current assets and liabilities were:

- A substantial reduction of £253,043 in stock on hand and in process, the value at the end of the financial year being £876,568.
- An increase in stock in transit, which was negligible last year, of £44,221, representing shipments of raw materials from overseas.
- An increase in sundry debtors of £83,628 to £198,900 reflecting the additional flow of business.
- A reduction in bank overdraft of £243,610 to £533,223.
- An increase in sundry creditors of £48,705 to £123,225.

Fixed Assets

Depreciation more than offset the additions to plant and the depreciated value of £486,487 showed a net decrease of £15,888.

Shareholders' Funds

Shareholders' funds total £930,585, an increase of £26,695 allowing for dividends amounting to £38,418.

Taxation

The reduction in public company income tax from 9/- to 7 the £ announced in the recent Budget is most welcome. It s provide a much needed stimulus to industry since it reduces drain upon cash resources and assists in the provision of ade reserves.

General

Prospects for the current year are encouraging. Turnov far has been maintained at a high level and orders for all products are coming to hand in a gratifying manner. As yo aware, during the war we laid down spinning plant primaril the purpose of meeting our own requirements of wool and c yarns. In the past year production was largely increased wit object of developing the sale of these yarns to the knitting weaving industry. Results have been highly satisfactory and department is now one of the most important in our business responsible for a large proportion of our turnover.

In conclusion I desire to express the thanks of the Board t General Manager, members of the staff and employees for splendid work during the past year.

THOMAS BROWN & SONS LTD.—

In addressing the Annual Meeting of shareholders on November 26, the Chairman, Mr. K. F. Dureau, said:

You will have seen that net profit was £24,781, an increase of just over 50% above last year's profit. This was partly due to approximately 20% increase in sales, resulting in profit before tax being £41,630, compared with £34,771 the previous year, but also largely to the Government at last appreciating the desirability of relieving companies of the overburden of taxation by reducing it from 9/- to 7/- in the £.

I feel sure you will share your Directors' satisfaction of the results obtained for the year and will agree with their recommendation to declare a dividend at the rate of 7½%, absorbing £15,000 of the profit earned by your company, leaving Consolidated Profit in the business to be carried forward amounting to £47,426.

The rear extensions to the premises have at last been completed. Unfortunately, as you have no doubt learned from the Press, Westclox (Australia) Pty. Ltd., who were occupying these premises as our tenants, have discontinued production in Australia and will wind up the company in the near future. Active consideration is at present being given to the satisfactory disposition of these premises. Fortunately, it was possible to dispose of your interest in Westclox (Australia) Pty. Ltd. during the year under review with comparatively little capital loss.

Production and sales of Begwaco Gas Meters continued to progress at a satisfactory rate during the year, and this product of your company is now well regarded throughout Australia and has a sound future.

Sales of Aircraft Spark Plugs were satisfactory during the year, but this product of your Company would now appear to have a doubtful future due to the jet trend.

Contrary to expectations, the foundry has not contributed to the profits of the Company as yet, but the quality of the work it is producing is far superior to anything else obtainable in this country, and the Directors are hopeful as to the future prospects of this project.

Since the conclusion of the year under review we suffered the sad and sudden loss of our Managing Director, who was one of the original formation members of the Company and its chief executive officer since its inception. I would like to take this opportunity to pay personal tribute to my late colleague, Mr. R. M. Edwards who loyally served the Company through all its difficult years and to whom much of the credit must be given for its development and progress to this day, and in the future too, because of his wide and discerning choice of personnel who are carrying on so splendidly with the spirit of honest service he imbued in them. On behalf of the Directors, and I am confident the shareholders would wish me to include them also, I wish to express appreciation to the executive staff and all employees, our sincere thanks for the high standard of service they have rendered to the Company during the year, which has enabled such a satisfactory result

Will ready cash be there to pay DEATH DUTIES?

WHEN a man dies, the first need of his dependents is cash with which to pay Death Duties.

Unless cash be available, some of the assets must be sold to raise the money, and hurried selling of property and other holdings often means selling at a loss. The better way is to arrange for payment with the proceeds of an A.M.P. Policy specially earmarked for that purpose.

Through the A.M.P. you can arrange that your dependents will have the cash with which to pay all such dues without any loss to the Estate.

Have you made such arrangements with the Society?

Ask the nearest A.M.P. office to give you details.

‡1952 reserves incl. £3,524 reserves of newly-acquired subsidiary.

A chain of wholly-owned subsidiaries manufactures and installs domestic and farmers' hot water services. These include gas, electric and fuel hot water services; dairy water heaters (electric and fuel); electric and gas sink heaters, wash coppers, bath heaters, as well as general lines of sheet metal manufactures.

In 1952 the company acquired the agricultural machinery and implement manufacturing business of Lightning Implements Pty. Ltd. The business has been re-organised and many new lines are scheduled for production within the next twelve months.

In December, 1953, the company issued 152,440 6% Regisgistered Unsecured Notes of 20/- at par. An option certificate was issued with each note, giving the holder the right on December 31, 1958, to either convert each note into two 10/- ordinaries at par, or take up the shares on payment in cash.

Net tangible asset backing (book values in consolidated balance-sheet)—14/- per 10/- share.

The following report by the Chairman, Mr. G. H. O'D. Crowther, was circulated to shareholders with the Annual Accounts:

The turnover of the Group was again satisfactory although, as predicted in my previous report, at a lower level than the record figures reached last year.

Sales of water heating appliances were reduced because wholesalers greatly curtailed their purchases in order to reduce their inventories, which had grown to excessive proportions. This adjustment occupied at least nine months of the year, but we are now in a position that most of our customers have balanced stocks and are buying in satisfactory volume to meet the renewed consumer demand which has become evident in recent months.

All States are now operating on a profitable basis, but the profits of all subsidiaries, with one exception, were lower in the year under review than in the previous year.

Lightning Implements Pty. Ltd., manufacturers of agricultural machinery, has been the subject of considerable reorganisation and development, and many new lines are scheduled for production within the next twelve months. It is anticipated that this year will see this subsidiary produce results in keeping with the development put into it and improved designs.

Consolidated Statement of Profit and Loss.

The Consolidated Profit of Braemar Industries Limited and its Subsidiary Companies was £50,806, a decrease of £9,969 by comparison with the previous year.

This profit was earned after charging £6,822 for depreciation and providing £28,997 for taxation. General reserves have been increased by £15,200, and a further £5,000 has been transferred to Stock Valuation Reserve.

Shareholders will note that £4,000 has been transferred to the Provision for Doubtful Debts; this appropriation is intended to cover two outstanding accounts in an interstate subsidiary. Contracts were received for the supply of water heating appliances to two overseas firms which had contracted to supply and erect prefabricated houses for a Government Authority. There is a considerable doubt of the stability of both of these firms, and we have instituted proceedings to recover the amounts due to the company.

Consolidated Balance Sheet.

The Budget this year afforded a welcome relief when it reduced the rates of company taxation, and we have made the provision at the lower rates applicable to the current year.

Fixed Assets have increased by £25,742, and now appear in the accounts at the written-down value of £174,595. Current assets have decreased by £34,227, whilst current liabilities have decreased by £29,494.

The policy of planned stock reduction adopted last year has reduced the value of stock on hand by £40,978, and it is the Board's intention to pursue this policy until such time as stocks are adequate in accordance with current trading conditions.

Current Trading and the Future.

During the last quarter of 1952-53 and the first three months of this financial year there has been an upward trend in sales. Trading conditions which were in existence at the time of my last report have now eased, and every effort is being made to increase turnover whilst keeping costs to a minimum.

New lines are being introduced each year, and the Board is confident that this policy of maintaining development of products outside the water heating field will greatly enhance the company's prospects for the future.

During the year, senior executives of the company paid visits overseas to investigate the development of new products and to foster the links which at present exist with overseas organisations. These trips have been beneficial and as a result new products are being developed.

It is apparent that the period of recession experienced for the greater part of the last financial year has now passed, and we can expect satisfactory results in the future. The latest Federal Budget is very welcome because of its stimulation to trade and its effect is already apparent in business forecasts.

Since June, the sales of the Company Group have been at a higher level than the average sales for the year 1952-53, and for the corresponding period of last year.

Stock Units.

Active trading in our shares listed on the Stock Exchanges of Melbourne, Sydney and Adelaide, has created a heavy volume of work in our Share Department, and the Board considers that savings would arise from the conversion of ordinary shares to stock units.

For this purpose, an Extraordinary General Meeting of shareholders will be held on November 20, 1953, to consider, and, if thought fit, pass the necessary resolutions to effect this recommendation. Numerous other companies have taken similar steps

recent years, and I should like to point out that the conversion stock units in no way affects the rights and privileges of shareholders.

Shareholders in the company now number 810.

Superannuation Fund.

In keeping with modern staff practice, a superannuation scheme was introduced on July 1, 1952, to provide security for selected employees and their dependents against retirement or premature death.

Audit.

Since the end of the financial year, the company has experienced a most regrettable loss by the death of our auditor, Mr. William John Salthouse. His experience and judgment, freely given to the Board and our executive officers, was of great assistance during the formation of the company and in subsequent years.

To fill the vacancy, Messrs. Hancock & Woodward, Chartered Accountants (Australia), were appointed, to hold office until the date of this meeting.

Staff.

Again I must pay tribute to the executives and staff of all companies within our organisation for their loyal efforts and co-operation during the past twelve months.

It is the executive staff who produce the results, working through the various grades of employees, and the past results of the company show that we have an excellent band of executives.

The labour force available during the past year has been greater than for some years past, and we have been able to obtain employees of better quality and greater stability.

I now formally move the adoption of the Balance Sheet, Profit and Loss Account, and the Reports of the Directors and Auditors as presented to the shareholders at this meeting.

A.M.C.I.A. Limited

Reg. Office: 307 Latrobe St., Melb. **'Phone:** MU 3954. **Directors:** J. A. O'Connor (Chairman and Joint Manag. Director), A. A. Findlay (Joint Manag. Director), P. A. Morawetz, W. J. King, A. J. Molloy, L. F. Pratt. **Auditors:** A. L. Royce & Warne-Smith.

Year ended June 30, 1953. Meeting October 26, 1953.

Because of the introduction of a new model, no Skoda cars were received, and only a few Mercedes Benz cars arrived during the year. Profit receded to £6,501 and a reduced ordinary dividend of 6% was paid, partly from the profit on sale of a property.

Previously known as Skoda Cars Limited, the company was formed in 1951 to operate the Victorian and Riverina franchise for the Skoda Cars. It later acquired the shares in M. & B. Distributors Ltd. which holds the Mercedes Benz franchise for the same area.

Another wholly-owned subsidiary, Modern Domestic Appliances Ltd., sells and services refrigerators, washing machines and heating appliances.

In addressing shareholders at the Annual Meeting held on September 22, the Chairman, Mr. J. A. O'Connor, made the following remarks:

In considering this report, I wish to remind you that, in my last year's report, I forecast no appreciable profit for the first half of this year, with better prospects in the second half, after the arrival of the new "Skoda" Sedans.

Although we did not receive any "Skoda" Sedans or "Mercedes Benz 300" Saloons, and only a few "Mercedes Benz" Diesel Sedans, before the end of the financial year, I am pleased to state we were able to show a trading profit of £9,603, and by selling one of our properties at an opportune time, a surplus of £11,278. From these profits, an amount of £9,668 has been paid in dividends. The liquid position has improved considerably, and an overdraft of £22,000 one year ago has been converted to a £22,000 credit balance this year.

The ratio of assets to liabilities now stands at almost £6/10/- to £1 for every £1 liability.

All subsidiaries have shown a trading profit.

M. & B. Distributors Pty. Ltd.

During the past two years a great deal of spade work and capital has been put into building the agency of "Mercedes Benz", which, in due course, should show good returns.

The "300" Saloon, which is undoubtedly one of the world's finest cars, is now on display and we cordially invite you to visit our Showroom and inspect this master-piece—together with the "220" Saloon and "Diesel" Sedan, noted for its outstanding economy.

Skoda Distributors Pty. Ltd.

The new "Skoda" Sedan has a fine appearance, a bigger engine and full 6-seater body. This should prove quite a good seller, and we have assurance from the factory of improved supplies for this financial year.

Modern Domestic Appliances Pty. Ltd.

This Company distributes refrigerators, washing machines, and many other lines. During the last two years, it has built a very fine Refrigerator Service Department, and should continue to enlarge on a sound and profitable basis.

Skoda and Mercedes Benz Spares

This Company, during the year, has done an excellent job in attending to the wants of our clients, while, at the same time, it has shown a reasonable profit.

I take this opportunity of thanking my co-Directors, and the Staff, for their co-operation and loyal support during the year.

Company Meeting

ECONOMIC DEVELOPMENT AND HIGH COSTS

Bank President's Views

The current economic situation was happier than could have been expected a year ago, said Sir Colin Sinclair, the President of the Bank of New South Wales, in reviewing business conditions at the annual meeting of the Bank on November 27. Export income, the foundation of our national prosperity, had been most satisfactory, movements in both prices and wages had steadied, and the volume of unemployment was very low.

Economic conditions in Australia, indeed, were comparatively stable, but he added that we could not afford to deceive ourselves by the apparent state of balance.

The Challenge of Development

He went on: "The fast rate of growth in population and the rapid pace of technological change bring in their train the need for a huge expansion of resources, and require a large volume of new investment. Such a challenge will call not only for courage, but also for mobility — mobility of minds as well as of resources — and a reversal of those attitudes which keep enterprise confined within a framework of hidebound procedures or bureaucratic controls."

He considered that past investment in industry had expanded productive capacity without as yet realizing its full fruits. The same could be said of most of the primary industries, for though the trend of output was upward and productivity had improved, one could not help feeling that there was room for substantial improvement even on the strength of existing resources.

The Pinch of High Costs

The reasons why potentialities had not become actual and why business was cautious were not hard to seek. Competitive conditions had been restored throughout the world when the Australian economy was feeling the pinch of its high costs.

"The new conditions require adjustments in the Australian economy which we have been only too prone to put off. Markets will be retained only through greater efficiency, higher quality, and competitive prices."

In secondary industry, some important products had more than held their own in uneasy marketing conditions, but others would have been in serious difficulty on the basis of existing tariffs but for the protection afforded by the import licensing system. Even higher tariffs, added Sir Colin, would not by-pass the need to tackle the existing cost structure.

There was much slack in the efficiency of industry to be taken up by both labour and management, but governments, too, would have a part to play. The Commonwealth burget had made an important start in lowering the burden of taxation on private activity, but the demands of governments, and their interference at all points of the economy, were seriously impeding the attempts of industry and business to get to grips with their problems.

Banking

On the subject of banking, Sir Colin Sinclair said that the situation of low liquidity had been transformed by early 1953. Though advances had declined through the run-off in stocks, the amount of new lending was substantial, but it did not show in the published figures.

The new banking legislation had introduced some improvements, but on the whole it had proved disappointing. Although the burden of special accounts was less onerous, the structure of banking control established in 1945 had not been greatly altered.

Sir Colin concluded: "In a country which bases its hopes for the future on the expansion of economic resources, the fact that these controls could be imposed in their full rigour at any moment presents the danger that enterprise could be hobbled and development monopolized by government administration or by the action of doctrinaire socialists."

In his address to shareholders at the Annual Meeting held on November 25, the Chairman, Mr. R. J. Webster, said:

It is with the deepest regret that I have to record the very sad loss of two of our Directors and of our Auditor since the last Annual General Meeting. The late Sir Walter Massy-Greene, K.C.M.G., who had been Chairman of the Company since 1939, died on the 16th November, 1952. The late Sir Walter Massy-Greene was known to me over a period of 30 years, during which time he played a very important part in the political, financial and industrial life of Australia.

After his death a member of the Board, Sir G. Dalziel Kelly, Kt., became Chairman. Sir Dalziel Kelly was a distinguished Australian who had been knighted for his services to the community. Unfortunately, he collapsed and died very suddenly on the 18th February, 1953.

In July this year, Mr. H. J. Trist, whose firm had been the Company's Auditors since the date of its incorporation, died after a long illness.

I am sure you will agree with the action of your Board in recording appreciation of the services carried out by these gentlemen for the Company and of conveying to their respective families the Company's deepest sympathy with them in their sad loss.

Consolidated Accounts

Taking into consideration the adverse trading conditions experienced in the early part of the year under review, the results for the year ended June 30, 1953, have been very satisfactory indeed.

Before making provision for taxation the net profit of the Company, as shown by the Consolidated Accounts for the year ended June 30, 1953, was £506,033—an increase of £10,106 over the figures for the previous year and the highest on record.

The net profit remaining after provision for Taxation, is £365,364 compared with £375,926 last year. The lower profit after tax, in comparison with the previous year, is explained by the fact the provision for taxation this year is approximately £20,669 gre than the provision for last year.

The value of the plant, furniture and fittings, etc., at Jun last, was £4,202,000 against which there is a Depreciation Res of £1,461,000. The value of the freehold land and buildings w house the plant, appears in the Balance Sheet at £1,737,000. serves and Accumulated Profits total £1,823,000.

Stocks, stores and spare parts on hand are shown at £2,44 compared with £2,724,000 for the previous year and £3,546,603 the year ended June 30, 1951. Shareholders will be intereste know that at October 31, stocks, stores and spare parts on were estimated at £2,048,000—a reduction of £400,000 compared the figure at June 30 last. There are no surplus stocks, but value of stocks on hand, of course, will continue to fluct Stock figures are substantially affected by the periodical purch of Raw Cotton.

Bank Overdraft at £989,000, shows a notable reductio £244,000 on the position as at June 30, 1952. The figure at June, was £1,519,207. Bank Overdraft at October 31 was £848,000, a duction of £141,000 as compared with the Overdraft at June 30

The balance in the aggregate Profit and Loss Account, providing for final dividend, is shown as £325,792 as compared £231,963 at June 30, 1952.

These improvements have been effected simultaneously wi very marked increase in sales, both in value and number of and are, therefore, particularly pleasing.

Trading Conditions

In the early months of the financial year under review, Company still suffered competition resulting from the accumul of excess stocks of imported cotton yarns and cotton piece which followed the lifting of the duties on these commoditie

their admission under By-law concession during 1952. This matter was referred to in my previous report.

Certain commodities of which we produce substantial quantities —Woven Cotton Duck, Tyre Cord Yarn and Tyre Cord Fabric— have no protection at all against competition from the United Kingdom and only a Preferential Duty against foreign competition. The higher rate of wages which we have to pay operators, the 40-hour week and the costly concessions which have to be made, all handicap us in competition with our overseas competitors. For many years, in spite of the fact that we had no Protective Duty, we were selling these commodities cheaper than they could be imported from overseas, but the recent recession in demand for textiles overseas resulted in our meeting heavy competition. Fortunately, we were able to maintain the mills in production, though at reduced hours of work. No Plants have gone completely out of production. The Canvas and Duck Mill at Rutherford had to go on to less than one shift, whereas it previously worked two shifts—and in some sections three shifts.

The same state of affairs prevailed in regard to the Melbourne Canvas and Duck Weaving Plant. In the Tyre Cord Mills there was a substantial reduction in total output. Our Melbourne Mill had to completely abandon production of Tyre Cord and Tyre Cord fabrics. Fortunately, with a little ingenuity, we were able to switch it over to other forms of production from which satisfactory profits were received.

The Tyre Cord Mill at Bendigo, which had been working two full shifts, and in sections three shifts, had, during the greater part of this year, only part of its Plant producing Tyre Cord and fabric on one shift; the balance of the Plant was used for producing other yarns—also only working one shift. This Mill, however, is now back on to three-shift working, producing Tyre Cord and Tyre Cord fabric.

Tariff Protection

Two Tariff Board Inquiries have already been held into the necessity for duties on Cotton Duck and Cotton Tyre Cord and fabrics; the first inquiry took place as far back as 1939. Assistance was withheld then, because of the fact that the war was in progress and it was not considered there would be any difficulty in disposing of the production of these Plants.

The next Inquiry was held in 1949. At this particular time we were selling the products of our Mill at substantially lower prices than those at which they could be imported, duty free, from overseas. We were against unsuccessful in getting a duty.

What we had foreseen finally came to pass. As soon as our overseas competitors had surplus supplies of Tyre Cord and Cotton Duck, they shipped them to this market at prices far below the cost at which we could produce—with the result to which I have already referred.

A further inquiry into the necessity for duties on both Tyre Cord and Cotton Duck has just been completed by the Tariff Board and it is expected that the unanswerable case presented on this occasion will result in the Australian industry receiving adequate protection.

Plants operated by the Company and Products made by the Company

Your Company has now 14 Mills operating as separate units. Of these, seven are located in Victoria and seven in New South Wales. These Mills, collectively, are engaged in the spinning of Raw Cotton and its conversion into cloth which is subsequently dyed, or otherwise processed.

During the period whilst heavy stocks flooded the market, the Company successfully switched over two of its Cotton Spinning Mills to the production of Spun Rayon Yarns, although, here again this commodity has no Tariff protection.

Spun Rayon Yarn is a high-class technical product, the satisfactory production of which could only be attempted by first-class Spinning Mills managed by skilled technicians and operated by well trained workers. I am sure you will be pleased to know that the quality of the Spun Rayon Yarn produced by your Company has proved equal to the best of imported yarns from the United Kingdom and Continental countries.

Substantial quantities of this type of yarn are still being produced by your Companies whilst, at the same time, they have been able to meet the steadily increasing demand for cotton yarns. Our Mills have been able to do this by returning to shift work.

New Plants

During the year, considerable progress was made with the bringing into full production of new Plants comprising a complete Bleaching and Mercerizing Unit at Rutherford, New South Wales and a modern Weaving Mill at Kotara established in the period under review.

Other New Developments

During the year, the Company purchased a modern Yarn Dyeing Plant which is now in the course of installation at Rutherford; it should be in production during the current year. This new plant will take the place of the existing Dyeing Plant which was purchased by your Company in 1932.

Burlington Mills (Australia) Limited

In March this year, your Company was given the opportunity of acquiring the shareholding interest of Burlington Mills Corporation of the United States of America in Burlington Mills (Australia) Limited.

This opportunity arose because of the policy adopted by the United States Company of divesting itself of its overseas interests by selling minority shareholdings it held in Companies outside the United States.

The shareholding interest of the American Company in Burlington Mills (Australia) Limited comprised 233,000 Ordinary Shares. Your Company was able to acquire these shares by an issue of 116,500 Ordinary Shares in Bradford Cotton Mills Limited. The cost of the Ordinary Shares in Burlington Mills (Australia) Limited to your Company, in terms of its own Capital, was only 10/- per share.

The Ordinary Shareholding of 233,000 £1 shares in Burlington Mills (Australia) Limited, gives your Company a 33% holding of the Ordinary Issued Capital of this Company—since its total Ordinary Capital is 700,000 shares.

Burlington Mills (Australia) Limited is one of your Company's biggest customers, being a substantial buyer of both Staple Fibre Yarns and Cotton Yarns. Burlington Mills Corporation of the United States has renewed its agreement with Burlington Mills (Australia) Limited whereby it gives to the latter Company technical advice and assistance under a Service Agreement.

The Australian Company recently announced its intention of paying a dividend of 6% on Ordinary Shares in the Capital of that Company in respect of the year ended June 30, 1953. The return on the investment by Bradford Cotton Mills this calendar year will be 12%.

Productivity

A lot has been said during the year in a critical way, by Members of Parliament and commercial interests generally with no very close association with manufacturing in a big way, about the necessity for increased production, the necessity for incentives and lack of willingness to work on the part of the Australian people. Though there is, no doubt, ground for criticism of this kind, there is no appreciation of the extent to which management in Australia has already tackled these tasks.

There do exist some Manufacturing Companies which have failed to advance with the times and which attribute their want of success to dozens of other reasons rather than to this fact, but this condition of affairs exists in other countries and also amongst all other sections of our own community.

So far as Bradford Cotton Mills is concerned—and you can accept my assurance that it applies in the case of hundreds of other companies—every effort is made to keep abreast of modern developments so far as they relate to management and technical production.

We regularly send key employees overseas to study modern methods in the best of the Mills in the United States, United Kingdom and on the Continent. We have, over the years, adopted improved methods of selection and induction for employees, instituted continuous training schemes in all of our Mills and given encouragement to our technical men to study by making time available to them and by giving financial assistance, developed supervisory training, made a special study of industrial relations, carried out extensive Methods Improvement Studies and installed incentive systems of payment.

We have had our Mills under continuous survey for many years by Methods Engineers and Management Consultants. Production figures and costs from any of our Mills show that great improvements have been made over the years in regard to production and management and the quality of our products.

It may be of interest to Shareholders to note that, in the two cases recently heard by the Tariff Board, sworn evidence was given to show, in the case of Tyre Cord, that our output per man-hour in all Departments of the Mill, had increased more than 93% in the course of a few years and that the cost per pound in direct labour over that period, had shown a decrease of 19% in spite of the fact that the wages per man-hour had increased 56%—31% of which is represented by an incentive payment.

In the case of the Sydney Spinning Mill producing cotton yarn for the weaving of Cotton Duck, production per man-hour rose by 72.9% between 1949 and 1953. Although the minimum wage increased 88% and the price of raw cotton increased by 64%, the actual cost of the yarn only increased by 56% due to the increased productivity already mentioned.

G.A.T.T.

As was pointed out in the Chairman's address last year, it is considered that Australia should withdraw entirely from the General Agreement on Tariffs and Trade. From an Australian point of view the case for complete withdrawal is unanswerable.

General

Since June 30 last, trading conditions have been very favourable and we feel optimistic about the trading results for the current year.

The Commonwealth Government in its last budget gave some welcome relief from high rates of Company Taxes which have applied in previous years; this should encourage and benefit all industry.

However, other favourable features of the budget did not benefit your Company directly to any great extent. The advantage to your Company in the increase of the Statutory exemption for Payroll Tax will be negligible. Payroll Tax paid by your Company during the year under review, amounted to £34,000. It is a matter for regret that the Commonwealth Government did not take the opportunity of abolishing this Tax altogether.

Most of the products manufactured by your Company are "an aid to manufacture" and, of course, are exempt from Sales Tax. However, Sales Tax reductions should be reflected in costs of other supplies which your Company is required to buy for general purposes, but the direct savings in this direction are relatively not very considerable.

Staff

Although during the year under review we have been consolidating rather than expanding, the Company has had more than its share of problems; that they have been overcome successfully has been due largely to the executive staff and employees generally, to whom I desire to convey my appreciation.

The company is the largest manufacturer of earthmoving equipment in the Southern Hemisphere. Apart from products specifically designed for attachment to Oliver tractors imported from America, the company manufactures many machines that may be drawn by any other make of crawler tractor. These include scrapers, scoops, rippers, rooters, and the like, while other "Britstand" products are complete in themselves, such as motor road graders, concrete mixers, etc.

Despite competition from other countries, the company has developed exports to countries including South Africa, India and New Zealand. New products are also being developed for the local market.

In addressing the Annual Meeting of shareholders on November 25, the Chairman, Mr. W. H. Reardon, said:

It has previously been indicated to shareholders that current trade conditions had resulted in considerable reduction in immediate demand for the types of earthmoving, concrete mixing and materials handling equipment manufactured by the Company and the Directors regret to have to advise that the market was extremely depressed during the financial year under review.

As shareholders are aware, the Company is a manufacturing organisation and the retail sale of its products is effected through well-established State Distributors. It will be clear, therefore, that the operations of the Company are so different as to make it impossible to logically compare results with distributor organisations.

Effect of Reduction in Public Works

The severe curtailment of Government and semi-Government works and general heavy construction activities, also the actual entry of some Government Departments into the selling field, greatly affected the sales of our products by the Company's various State Distributors, which in turn greatly reduced the volume of this Company's sales.

You will observe that stock on hand is still high. Although during the twelve months it was reduced by close on £300,000, it is still in excess of the Company's present requirements.

As you are aware, this Company stood to benefit considerably under the $100,000,000 loan by reason of the extensive volume of equipment which it required to manufacture for large numbers of crawler tractors to be imported under the Loan. The quantities of tractors and equipment involved were estimated by certain Government Departments and our expanded manufacturing programme required, therefore, to be based upon such estimated requirements as related to the tractors with which Distributors of the Company's equipment would be concerned. As late as May, 1952 this industry was being referred to by leading Cabinet Ministers as one in which production would have to be further expanded.

The sudden reversal of Government policy in respect of national development and the lack of availability of finance to Shire and Municipal Councils resulted in considerable quantities of equipment produced and partially produced by the Company, also raw materials, becoming for the time being surplus to immediate needs. It is evident that Government estimates of requirements were very wide of actual needs.

By reason of the difficulties which confronted the Company as a manufacturer arising from the greatly reduced demand which was experienced so suddenly, the Directors considered it essential to adopt a policy of consolidation and the Balance Sheet figures before you will indicate the benefit of this policy.

Current Assets have been reduced by £589,660 and a reduction of £605,998 has been made in Current Liabilities and Provisions.

Additional Products and Exports

Confronted with the reduced demand on the Australian market for the normal lines of equipment manufactured, the Directors gave urgent consideration to:

(1) The possibility of some diversification of production, and

(2) The expansion of outlets in export.

Demand has been encouraging for certain new lines of equipment which were introduced during the year, and additional lines will shortly be released. Your attention is drawn to certain new lines of equipment illustrated in the Annual Report.

As indicated in the Directors' Report, considerable attention has been given to export markets. Whilst results achieved by the Company's Overseas Distributors have to date been relatively small the Directors are confident that despite severe competition, this aspect of the Company's activities can be expanded.

It will be appreciated that the high level of Australian wages and material costs makes it difficult to effectively meet world competition. Nevertheless, to date shipments of certain types of the Company's products have been made to South Africa, Rhodesia, Mauritius, India, Malaya, New Zealand and Fiji.

This we consider to be creditable in view of the fact that Britstand equipment was until recently unknown in most of these markets and results so far achieved encourage the Directors to persist in their efforts to establish a reasonable volume of export sales to be featured permanently in the Company's marketing policy.

Negotiations are at present taking place with respect to the manufacture and partial manufacture by the Company of certain types of British and American equipment. It is expected that these negotiations will be successfully concluded in the not far distant future.

The financial year ended 30th June, 1953, was the most difficult in the history of the Company and by reason of the financial results disclosed, the Directors recommend that dividend be paid on First and Second Preference Shares at the usual rates but that no dividend be paid on Ordinary Shares.

A net profit of £10,282 was earned during the year after charging £21,236 depreciation. No provision for taxation was necessary as the provision previously made was adequate. Carry forward of £14,733 as unappropriated profit will result from acceptance of the Board's recommendations, representing an increase of £5,682 over the amount brought forward from last year.

Trading conditions in this industry continue to be difficult but nevertheless, present level of trading shows some slight improvement on that experienced during the second half of the financial year under review.

Prospects

Despite the great recession in trade and difficulties experienced during the last year, the Directors have confidence in the future success and progress of the Company because, as mentioned on previous occasions, equipment of the type manufactured is so necessary for use in connection with essential development of Australia.

Further, the decision to produce certain additional types of equipment of a nature distinct from construction equipment, should in due course, assist to expand and strengthen the Company. Introduction of new lines of equipment cannot be effected overnight as time is required for designing, developing, testing, production and the necessary marketing preparation. Accordingly, shareholders should not look for any rapid improvement but rather expect that any improvement will be steady and possibly extended over a period.

In conclusion, I wish to express the appreciation of the Board for the excellent service which has been and which continues to be rendered by executives, staff and employees of the Company.

Bendix Consolidated Industries Ltd.

Reg. Office: Cornish Rd., Clayton. **'Phone:** UM 4081. **Directors:** C. J. Bendix (Chairman and Manag. Director), F. F. Bendix, E. A. Johns. **Auditors:** Jeffery & Mitchelhill.

Year ended June 30, 1953. Meeting November 12, 1953.

Following the general economic recession, turnover was lower earlier in the year, but improved after commencement of production at the new Clayton factory.

Profit was almost £10,000 lower at £7,791, and no ordinary dividend was paid, in order to conserve funds for the expansion programme.

At the Annual Meeting held on November 12, the Chairman, Mr. C. J. Bendix, addressed shareholders as follows:

After providing for depreciation of fixed assets, directors' fees and administration charges and making provision for income tax, the consolidated net profit for the year ended June 30, 1953, as disclosed by the audited accounts, amounted to £7,791. Added to this, the balance brought forward from last year makes the amount of £15,779 carried forward to the current year.

New Premises.

During the financial year under review, transfer was made of plant and equipment from the North Melbourne and Collingwood factories to the company's new freehold factory premises at Clayton. The cost of the freehold land and buildings at Clayton to date has been £67,186. Additions made to new plant and machinery during the financial year amounted to £5,316, and your Directors anticipate that the cost of completing the factory and certain extensions thereto will be approximately £10,000. Our new chromium-plating department is operating most satisfactorily, and we have evolved and marketed to retailers, with gratifying success, several new types of chromium tube furniture during the past year.

The decrease in gross turnover and in net profit compared with the previous year was occasioned by the general economic situation in Australia during the early part of the financial year, by the limitation of spending on developmental programmes by the Government and semi-Government authorities, and also by reason of some loss in production during the changeover of the company's plant and machinery from North Melbourne and Collingwood to Clayton.

Your Directors are happy to report that since the company commenced operations in the new factory at Clayton, both production and sales have greatly increased. The gross turnover of the company for the first three months of the current financial year exceeded the turnover for that period of last year by 228%. The new factory provides excellent facilities for the further development of our products, and it is hoped that, when fully completed, our turnover will be substantially increased.

Austral Hospital Equipment Pty. Ltd.

As from July 1 of this year, Austral Hospital Equipment Pty. Ltd., one of the company's subsidiaries, was taken over by the parent company, Bendix Consolidated Industries Ltd. following the removal of both plants and equipment to the Clayton factory. Your Directors decided that, in view of the fact that the plant of these companies is now operated at the same location, there was no necessity to continue the Austral Hospital Equipment Pty. Ltd. as a separate entity, especially as there was a similarity of manufacture between the lines produced by the two companies.

Dividends.

In view of the further cost of proposed extensions to the factory buildings at Clayton and the proposed installation of additional plant and machinery, your Directors recommend that no dividend be paid to shareholders out of the profits for the year ended June 30, 1953. However, it is confidently expected that the payment of dividends will be resumed in March of next year.

Apart from the foregoing, your Directors report that the operations as disclosed for the period under review have not been materially affected by any items of an abnormal character.

Current Year.

As regards our business generally, your Board is constantly exploring the possibilities of new fields for successful expansion, and I am fully alive to the difficulties before us as business becomes still more competitive. Industry has enjoyed for a long time the sunshine of a "Seller's market," but conditions have now completely changed; the public taste has shown a marked alteration, thereby creating a keenly competitive market, which in my judgment is all to the good and which will ensure to the consumer the highest quality goods at the lowest prices possible. Every section of our organisation is well prepared to meet changing conditions. With your continued support as to the necessary retention of profits for reserves, etc., and in view of the very substantial orders at present held for the supply of our products, we are confident of success and anticipate a very satisfactory current year.

We firmly believe that it is possible to achieve a steady rise in earnings, and in the standard of living for all those engaged in industry, provided they are accompanied by at least an equally steady rise in productivity. But it is not possible to increase wages constantly without a compensating rise in output per man, for this is the surest road to unemployment of both capital and labour.

Ballarat Woollen and Worsted Company Limited

The following address was given by the Chairman, Mr. W. A. Aikins to shareholders at the Annual Meeting held on November 24:

I must refer with deep regret to the death of one of your Directors, Mr. C. N. Tulloch, who died on April 30 last. Mr. Tulloch had been on the Board for nineteen years, and for almost ten years prior to 1952 he had been Chairman. In 1952 he asked to be relieved of the responsibility of the Chairmanship, owing to ill health. The Company has suffered a severe loss in the passing of Mr. Tulloch; his leadership, sound judgment, business ability and interest in the Company's affairs have proved over the years to be of much value to Directors and shareholders alike.

I intend now to briefly review the year's operations.

Profit Results

The net profit earned for the year under review amounted to £17,849, which is an increase of just over £3,000 on the net profit earned last year. Before this profit is arrived at adequate depreciation has been charged on fixed assets, and provision for taxation has been made at the new reduced rates. It is helpful to companies that the Commonwealth Government is endeavouring to reduce company taxation rates, as the high taxation that has been paid in recent years makes it most difficult for companies to maintain the liquid resources necessary to keep their plant as up to date as possible.

Dividends

The Directors are pleased to be able to recommend to you the payment of a final dividend of 7½% on both ordinary and cumulative participating preference shares, which together with the interim dividend of 2½% paid on May 30, 1953, makes 10% for the year, an increase of 2½% on last year. £5,000 has been allocated to Stock Depreciation Reserve.

Balance Sheet

The balance sheet as at September 30, 1953 does not need much comment from me, as all items are set out clearly and are self explanatory. Shareholders' funds at £421,488 are just over £5,000 higher than last year. Current liabilities are higher, due to a slightly increased bank overdraft, and increased provision for taxation and dividends. Current assets show a healthy increase, despite a reduction in stocks. Fixed assets also show a gain of approximately £12,000 after allowing for depreciation.

Mill Operations

Production in yardage and pounds of yarn spun was much higher than last year, and the mill has been fully employed since the end of last year. We find that there is a shortage of skilled operatives, due probably to the fact that there are not many similar industries in Ballarat. However, any employees whom we train learn quickly, and soon become proficient in their work. Junior females for our Spinning and Weaving Departments are also difficult to obtain just now. The amenity section for female employees is in use, and is greatly appreciated.

Machinery and Plant

Further new machinery to the value of £30,000 was received during the year, and, as mentioned earlier, all machinery has been adequately depreciated. The plant is in very good working condition, and well maintained.

Wool

The wool market opened firm, and has shown an upward tendency. This, of course is a good thing for the Australian economy but, as far as we as manufacturers are concerned, the higher the price of wool, the higher the selling price of the manufactured goods, and much as we would like to market our products at low prices, particularly for the boys' and children's trade, we find it impossible to do this under present wool prices and cost of production. It would, I think, be of great assistance to Australian manufacturers and the wool industry if the Governments would implement the Branding Act, which has been under discussion for some years. At the present time there are several cheap imported cloths on the market, which the public believe to be all wool, but in some cases, contain up to 80% fibre. In fairness to the public it would serve a very worth while purpose if all goods were branded as to their raw material content, as many of these cloths are of attractive designs, and the public should have some measure of protection against mixture cloth when protection is deemed to be necessary in other directions such as price control, rent controls, etc.

Tariff

The Woollen and Worsted Textile Industry in Australia suffered a serious setback in 1951-52, due mainly to the excessive overseas buying by both wholesalers and retailers alike. These imported goods were landed at that time at a higher cost than the price of similar goods made in this country, but we are informed that the public in the main sought the dearer imported article, which to our way of thinking, is a very bad thing for Australia in more ways than one. The import restrictions imposed by the Federal Government last year to conserve overseas funds did reduce these excessive imports, but it must be kept in mind that this industry which directly employs in the vicinity of 25,000 Australian workers and indirectly gives employment to many thousands more, is still vulnerable, and it could be fatal to a large section of the industry if the present tariff protection is not kept more up to date having regard to the standard and cost of living in Australia as compared with outside countries, whose labour and production costs are lower than in this country. We trust that the Federal Government is fully aware of these facts, and, if necessary, will take the action required to keep our industry, which in the last ten years has increased its number of spindles and looms, in proportion to the increased population, and is now quite capable of meeting all reasonable demands.

Every effort will be made to maintain the Company's present sound position, but with so many factors that can affect and change the position more or less over night, accurate forward prediction are not possible, but I can say that the present outlook for the industry appears to be quite good.

Directorate

During the year the Directors appointed Mr. H. F. Morrow Director to fill the vacancy on the Board caused by the death of Mr. Tulloch.

My address would not be complete without paying a tribute to our Executive Officers, Heads of Departments, and all employees of the Company for their able support and efficiency throughout the year, as they have all contributed materially to the satisfactory result obtained this year.

Cyclone Company of Australia Limited

Manufacturers of Metal Gates and Fencing, and other Wire and Steel Tube Products.

eg. Office: Gipps St., Abbotsford, Vic. **'Phone:** JA 6031. **Directors:** A. J. Chambers (Chairman), L. S. Chambers, R. S. Chambers (Manag. Director), A. L. Chambers, E. C. Milner, J. D. Munro. **Auditors:** E. V. Nixon & Partners.

7th Year ended June 30, 1953. Meeting October 30, 1953.

Turnover was again a record, and profit was also a record t £260,553, returning 33.7% on larger ordinary capital. Or-inary dividend was raised to 15%.

Net tangible asset backing (book values in consolidated balance-sheet)—Pref., £12/10/10; ord., £2/6/2.

In addressing shareholders at the Annual Meeting held on Octo-r 30, the Chairman, Mr. A. J. Chambers, made the following re-arks:

Once again, your Directors have great satisfaction in presenting shareholders a report of progress and expansion, and in stating at the sales of the year under review reached a record figure. l branches continued to improve production methods and the ditional gross profit which resulted from this, and from the ger volume of sales, whilst offset to some extent by additional sts due to basic wage increases, was satisfactory. The net ofit for the year, before taxation and exclusive of capital profits 55,724, was £418,402. This exceeded the comparable profit of e previous year by £150,401 and was an all-time record.

Appropriations

The total amount available for appropriation, including the pital Profits of £55,724, excess provision for income tax of pre-ous year written back (£5,706), and the balance of £31,250 carried rward from the previous year, was £511,082. Interim dividends £26,250 have already been paid out of this, and we have made following appropriations as at June 30, 1953:

Provision for Taxation	£165,000
Transfer to General Reserve	177,611
Transfer to Tax Paid Reserve	16,221
Transfer to Staff Provident Reserve	9,000

Your Directors now recommend that the usual 2½% final divi-nd be paid on the preference shares; that a final dividend of 10% paid on the ordinary shares, this to include 1% ex Tax Paid nds to the holders of shares numbered 1 to 300,000, and that unappropriated balance of £41,250 be carried forward to next ar.

The Board proposes to continue its conservative dividend policy, order further to strengthen the Company's finances, but it also ognises that ordinary shareholders should share in the pros-ity of the business, and so has recommended the lifting of the al ordinary dividend from 7½% to 10%, making a total of 15% the full year.

Capital

No material change has occurred in the amount of the paid-up capital, but the full use of the new capital and premium moneys which were received towards the end of the previous year is reflected in the increased profits of the year under review.

Surplus and Reserves

The total of our reserves is increasing steadily, and, inclusive of the balance of £41,250 carried forward in Appropriation Account, now amounts to £856,621. This is almost equivalent to our paid-up capital and the total of shareholders' funds has reached the substantial figure of £1,756,621, an increase of £187,420 during the year.

Working Capital

The liquidation of high-priced overseas stocks of materials had a marked effect on our bank overdraft position, the high figure of £702,627 at the beginning of the year having been reduced by £513,204 to £189,423 at the end. On the other hand, both trade debtors and trade creditors increased considerably, but these movements follow naturally our increased sales on the one hand, and our reversion to local buying of raw materials on the other. Working capital itself has fallen in amount from £635,594 to £497,974, but the favourable ratio of current assets to current liabilities has increased from 1.57 to 1 to 1.65 to 1.

Fixed Assets

The expansion programme is reflected in the growth of our fixed assets, and this movement can be expected to continue as our plans for new factories in Sydney, Brisbane, and Perth take shape. During the year under review, net fixed assets increased by £294,253 to £991,010, the majority of this capital outlay being spent on the Moorabbin Screen Wire Cloth factory, which is now in full production. It is the Board's policy to provide in all States factories of a type most suitable for our particular class of production, and to install in these the most efficient types of machinery.

(Continued on next page)

CYCLONE CO. OF AUST. LTD. (Contd.)—

Investments

The amount of our investments in subsidiary companies has increased by £30,787 and it is pleasing to record that these companies operated very successfully and profitably during the year.

Staff

I should like to place on record our appreciation of the loyal service of all the employees of our company. We are conscious that the excellent results of the year's operations would not ha been achieved without this splendid co-operation, and we are v proud of the good spirit which exists in our organisation.

Conclusion

In conclusion, I am pleased to report that the results of first three months of the current financial year have been v satisfactory, and another good year of trading is in prospect. production facilities have been improved, supplies of local r materials are more plentiful and, as the demand for our produ continues, we approach the future with optimism.

Broken Hill South Limited

Head Office: 360 Collins St., Melb. **'Phone:** M 1421. **Other Share Register:** London. **Directors:** Sir Alexander Stewart (Chairman), Sir Sydney Snow, G. Lindesay Clark, Andrew Fairweather, H. W. Buckley. **Auditors:** Buckley & Hughes; S. Powell.

35th Year ended June 30, 1953. Meeting October 30, 1953.

Consolidated revenue from working was reduced by 43% to £2,195,451, due to lower metal prices. However, taxation and royalty payments were £1,606,373 lower at £843,200, and final profit was higher at £1,543,009, returning 9/8 per share (last year 9/5). Dividend was reduced from 8/- to 7/- per share.

As from 1st July, 1952, Barrier Central Pty. Ltd. (a new subsidiary) took over Mining Leases Nos. 10, 11, 12 and 13 at Broken Hill. As a result, the accounts of the parent company for 1952/53 are not comparable with 1951/52. Consolidated accounts are on a comparable basis.

The total tonnage of ore mined at Broken Hill was lower at 297,947 (last year 299,744). Ore reserves at balance date were estimated at 1,987,000 tons. This estimate, however, is only a conservative one, as it includes no ore disclosed by diamond drilling only, or by limited development.

As from September 4, 1952, the Australian price for lead and zinc was fixed at £A95 per ton. On April 7, 1953, these metals were removed from price control. The London Metal Exchange began trading in lead on October 1, 1952, and the price fell from £164 to £108 in the first two months and at October, 1953, was £117/14/-. Trading in zinc commenced on June 2, 1953, and prices receded from £137/10/- per ton to about £93 in October.

Apart from its extensive mine and valuable mining assets, the company has large investments in other companies, which included the following at June, 1953:

Associated Pulp & Paper Mills Ltd.	453,750 shares of £1 each
Associated Pulp & Paper Mills Ltd.	90,750 shares of £1 each (10/- paid)

Broken Hill South Limited

In addressing stockholders at the Annual Meeting held on October 30, the Chairman, Sir Alexander Stewart, made the following comments:

As indicated in the Directors' Report, the profits of Broken Hill South Limited and our subsidiary, Barrier Central Pty. Limited have been combined, so that a true year to year comparison of results from the working of the Broken Hill leases may be preserved.

The total combined net profit was £1,462,011 compared with £1,476,849 for the preceding year.

Combined profit from mining sections totalled £1,088,617, which is £98,048 less than the £1,186,665 for last year. Although profits were adversely affected by lower metal prices, the cumulative effect of certain favourable factors was to produce a total net profit approaching that for the previous year. These factors were lower mining costs, substantially reduced provisions for income tax and New South Wales royalty, an improvement in the grade of crude ore treated, and a higher valuation placed upon unrealised concentrates. With regard to the last mentined item, I would say that since the termination of bulk buying of lead by the British Ministry of Supply in September, 1952, sales have been made by the smelting company on the open market. This change in procedure has resulted in lead realisations taking approximately four months from time of delivery to the smelters, compared with about two months previously. Consequently, in the preparation of accounts this year, we have had to value approximately twice the quantity of unrealised lead valued in previous years. Had we continued valuation of such material on the extremely conservative basis adopted in past years, we should have considerably understated the profit of the year, In now valuing unrealised metals at the cost of production, we consider a sounder basis is reached, particularly in view of the actual increased cost of production over recent years, but its effect is to raise the profit of this one year. The valuation adopted, however, still leaves a very substantial surplus on roalisation of these lead stocks to be brought into the earnings of 1953/54.

With regard to metal prices previously referred to, average lead prices received fell from £148/1/11 last year to £111/17/4 this year, zinc declined from £164 to £104, and silver from 8/3d. per ounce to 7/6d. per ounce.

The net return from interests in associated enterprises and other investments amounted to £373,394, which is £83,710 higher than the £289,684 earned in the previous year. This substantial improvement is largely attributable to increased dividends received from companies whose profits in recent years have been influenced by high metal prices.

With regard to the Balance Sheet, it will be noticed that some items show considerable variation when compared with the figures for last year. Shares in other companies have increased by £1,124,795 to a book value of £4,000,377. This increase is accounted for by the investment of £850,000 in Barrier Central Pty. Limited, 90,750 £1 shares in Associated Pulp and Paper Mills Limited (paid to 10/-), 49,154 £1 shares in I.C.I.A.N.Z. (paid to 12/6), and 93,204 fully paid £1 ordinary shares in Metal Manufactures Limited.

In connection with the investment of £850,000 in Barrier Central Pty. Limited, it should be noted that out of this amount Barrier Central paid to this Company the sum of £700,000 for mining leases purchased. The net amount of cash involved in the transactions so far as Broken Hill South was concerned was therefore £150,000.

Debtors for concentrate at £1,234,324 (including £247,766 in Barrier Central Pty. Limited accounts), are higher by £535,434. This is due, as will be gathered from my remarks made earlier in this address, to the greater delay now being experienced in the realisation of our metals.

Cash and deposits at £943,780 are much lower than a year ago. One reason for the difference is the slower rate of realisation of metals already referred to, but if realisation had proceeded at the same rate as in previous years, a large portion of the amount now appearing in debtors for concentrate would have been converted to cash. It should also be borne in mind that a very large proportion of the cash accumulated at 30th June last year was used to meet exceptionally high royalty and income tax commitments. Another factor which operated to reduce our cash balance this year was the rather heavy investment programme, which absorbed approximately £425,000.

The value of stores at the mine appears at £269,607, compared with £351,619 a year ago, a decrease of £82,012. This lower figure reflects the reduction in purchases during the year consequent upon a general easing of supplies.

Dividends

Dividend No. 96 of 3/- per unit of stock, declared payable on December 9, 1953, has already been announced. This payment will bring the total distribution from profits of the past year to £960,000.

Stockholders

You will no doubt be interested to know that the number of stockholders in this Company has now reached 8,335, of whom 6,854 are on the Australian Register, and 1,481 on the London Register. The average holding is therefore 384 units of stock of 5/-.

Investments in other Companies

Additions to the Company's shareholdings during the year are dealt with in the Directors' Report, and in my earlier references in this address. Shares in other companies appear in the balance sheet at a total book value of £4,000,377. Those of our holdings which are listed on the Stock Exchange show an appreciation at present market prices of approximately £800,000. The remainder of our holdings for which there are no quotations has, in the opinion of your Directors, a present value in excess of the book value.

The Mine

Operations were conducted at the mine during the year without any unusual interruption, apart from several days stoppage due to union stop-work meetings. The total tonnage of ore mined was 297,947 tons (236,075 tons from Broken Hill South Leases and 61,872 from Barrier Central Leases) compared with a total of 299,744 tons extracted last year.

The combined ore reserves of Broken Hill South and Barrier Central are estimated at 1,987,000 tons, compared with 1,900,000 tons a year ago. It is very satisfactory to note that notwithstanding the extraction of nearly 300,000 tons of ore during the year, mine development work carried out has justified an estimated ore reserve slightly in excess of the tonnage stated last year.

Working costs (ore extraction, mine development and ore treatment) for the first year of operating under the new conditions, were for Broken Hill South £9/1/11 per ton crude ore, and Barrier Central £10/17/9 per ton. Mainly due to increased production by both companies, working costs for the first three months of the current year have improved considerably, the progressive figure for South being £7/11/5 per ton crude ore, and Barrier Central £7/18/10 per ton crude ore.

Lead bonus payments to our employees, although on a reduced scale when compared with the preceding year, were still a very considerable addition to their earnings, and averaged £12/11/10 per employee per week. The total amount of wages etc. paid to employees during the past year was £1,880,941, giving an average yearly remuneration per man for full time employment of £1,510.

Speaking generally, the position at the mine calls for little comment. We have no large plant construction programme in hand, and development work is well advanced. This state of affairs at a time when metal prices are less buoyant is particularly satisfactory.

Metal Prices for Australian Sales

At our Annual Meetings during the past few years, I have referred to this subject and directed attention to the great burden which our Company, with others, was bearing in the process of supplying lead and zinc to Australian consumers at a price much lower than that ruling overseas. As from September 4, 1952, the Australian price for lead and zinc was fixed at £95 (AC) per ton. Since that date there has been a considerable fall in overseas prices, and further representations were made to the authorities with the object of securing decontrol of the metals in question. I am pleased to advise that these efforts were finally successful, and on April 17, 1953, the State Price Fixing Authorities decided to remove lead and zinc from price control. The Australian prices for both these metals are now related to London Metal Exchange quotations.

The Outlook

At our last Annual Meeting, I referred to the serious fall in lead price which followed the suspension of bulk buying of lead by the British Government and the reversion to trading on the London Metal Exchange as from October 1, 1952. Lead price fell £56 per ton from £164 to £108 in the first two months after the change in marketing procedure. Although the price has fluctuated during the past year, it is now at £117/14/-, very close to what it was twelve months ago. There has since been a similar experience with zinc, the price of that metal receding from £137/10/- on January 2, 1953, when London Metal Exchange trading commenced, to about £93 today. I have no doubt that if prices in the vicinity of those mentioned continue to rule, and we are able to maintain continuity of productive operations, the current year will yield reasonable profits.

We know there are dangers in the continuance of very high metal prices such as were experienced in recent years prior to the decline mentioned, and evidence is not lacking of manufacturers seeking substitutes for our products, particularly lead. I mention the paint and cable-making industries as instances where high metal prices have stimulated the search for cheaper materials to replace lead. Unfortunately, from our point of view, those efforts have met with some success, but it is hoped that the present lower scale of metal prices will help to meet this increased competition from substitutes. Renewed efforts are being made to develop uses for, and to keep consumers aware of, the advantages of the metals we produce.

Finally, I would say that our mine is in good shape as a producer, and output so far this financial year has been above the level of recent years.

Staff

The splendid result disclosed for the year reflects great credit upon the management, staff and employees—both in Broken Hill and Melbourne. The enthusiastic approach they have made to the many problems that have arisen and the co-operation and teamwork they have displayed have been most gratifying. On behalf of the Directors, and I am sure, the Stockholders, I take this opportunity of placing on record sincere appreciation of their efforts.

In his address to shareholders at the Annual Meeting held on December 14, the Chairman, Mr. Staniforth Ricketson, said:

It is the sad duty of the directors to place on record the loss of a most valued colleague and beloved friend in the person of Sir George Dalziel Kelly, who had been a director of the company since its inception. Sir Dalziel was a director of each of the other investment companies in the Capel Court Group, having joined the boards of the four oldest companies in September, 1938, subsequently becoming a director of each of the newer companies as formed. During his association with the group, he made splendid contributions to the development of the various companies and to their prestige, just as he did in the many other spheres in which he was known as a man of outstanding ability and integrity.

To fill the vacancy caused by the demise of Sir Dalziel Kelly, Colonel F. H. Wright, O.B.E., V.D., accepted an invitation to join the Board of this and the other companies. Mr. E. Aston Lloyd was appointed to act as Alternate Director for Colonel Spowers and Mr. R. S. Clayton was appointed as an alternate director for myself.

CAPITAL OF THE COMPANY.

Since registration of the company in 1950, the paid-up capital has remained unchanged at £100,000, comprising 400,000 stock units of 5/ each fully paid. It is the policy of the directors of the Capel Court Group of Investment Companies to make progressive increases in the capital of the various companies as opportunity offers, and that all such new issues should be offered to stockholders at par in proportion to their holdings. In this way, the latter are afforded opportunities for the investment of their savings as they accrue.

It is anomalous that it is always easier to raise new capital when the general level of share prices is high than when the market presents the most favourable opportunities of employing additional funds in the purchase of sound stocks at attractive prices. In existing circumstances, your company could profitably employ additional capital in this way, but your directors are naturally not prepared to ask stockholders to subscribe for shares at par when the market price of the existing stock units is below par. However, when conditions are propitious, stockholders may rest assured that they will be given an opportunity of increasing their holdings on favourable terms.

INCREASING INCOME-EARNING FUNDS.

Attention is continuously directed towards strengthening the financial position of the company and building up the funds capable of earning income for stockholders. As the company did not commence business until August, 1950, subsequent to which Australia experienced a business recession, the establishment of really substantial reserves has not as yet been possible. However, in respect of each of the three years the company has been in existence, it has been possible to augment reserves and undivided profits after paying dividends at the rate of 4 per cent per annum.

As a result, total reserves and undivided profits at October 31, 1953, amounted to £5654, comprising: General reserve, £2750; revenue appropriation account carry forward, £1023; and investment fluctuation reserve, £1881. This, however, does not indicate the full extent to which the financial structure has been strengthened, as, during the last three years, the preliminary expenses, totalling £3566, involved in the formation of the company have been completely written off by annual appropriations from revenue.

In other words, after provision for dividend, £9220 of the profits of the company have been used during the last three years to strengthen the security for, and the earning capacity of, the stockholders' capital. When the company commenced business, net tangible assets, after payment of preliminary expenses, amounted to £96,434, whereas at October 31, 1953, on the basis of book values, they amounted to £105,654.

USE OF OUTSIDE MONEYS.

In addition to retained profits, investment companies of the management type make use of a certain amount of outside funds to further augment the earning capacity of the stockholders' funds. Apart from provision for taxation, £432, and provision for dividend, £4000, your company as at October 31 last, was using bank overdrafts against security (with accrued interest) of £23,629, an increase of £2617 during the year. Other outside liabilities were small, consisting of sundry creditors, £302, and securities bought but not delivered at the balance date, £49. The total of current liabilities and provisions increased from £25,362 to £28,412 during the year.

INVESTMENT PORTFOLIO.

Apart from a small item of £551 for sundry debtors the whole of the funds employed when the books were closed on October 31 last, were represented by investments, at cost, £133,515. At the same date, these investments had a market value of £110,410, representing a depreciation of £23,105 on book value. This represented an improvement on the position existing at October 31, 1952, when investments with a book value of £128,502 had a market value of £96,945, representing a depreciation of £31,557 on cost.

The foregoing comparison illustrates one of the basic principles underlying the operations of investment companies of the management type, namely, that undue importance should not be attached to the market value of the portfolio at any particular time. Fundamentally, investment companies are established as permanent entities, and seek to derive the average benefits inherent in the economy of the country or countries in which their funds are invested.

Economic conditions change from time to time, and these changes are inevitably reflected in the investment market. Long experience, however, has shown that periods of economic difficulty are usually short-lived and that, particularly in a country like Australia, where population is continually increasing and trade and industry expending, good times are more frequent than bad. Consequently, provided sound stocks are held, the natural growth in the economy over a term of years in reflected in gradually increasing capital and income benefits from these investments.

Your company's investments are well-diversified, being spread over no fewer than 147 individual Australian stocks, of which 94.9 per cent represent ordinary shares, 4.7 per cent preference shares, 0.4 per cent bonds and debentures. These investments give stockholders an interest in practically every type of sound industrial, trading and financial activity in the country, thus affording a high degree of safety of capital and prospects of increasing income as the expansion of the Australian economy proceeds.

NEW ISSUES.

One source from which benefits are derived by investment companies holding a wide range of stocks is new issues of capital made by various companies from time to time on favourable terms. During the last 18 months, such new issues have been less frequent than they were in the earlier post-war years. However, during 1952-53 your company obtained by allotment or purchase in the market 4470 shares (including 174 bonus shares) in 11 companies, and holdings of £2248 of registered unsecured notes, 2810 share options and £1000 of debenture interest stock in four other companies.

Recently, many large and small companies have offered their shareholders the opportunity of subscribing to new issues and it is anticipated that numerous more new issues will be made when Capital Issues Control ceases after December 31 next.

REVENUE AND EXPENDITURE.

Revenue derived from dividends and interest (after deducting interest paid on borrowed money) increased from £6164 in 1952 to £6229 in 1953, whilst underwriting commissions provided £803 in the year just closed as compared with £328 in the previous period. Owing to small increases in audit fees and provision for taxation, which more than offset the reduction in rent, salaries, office and general expenses, total management expenses and taxation in 1953 were £130 greater at £858.

Net revenue increased by £410 to £6174, which represented earnings of 6.2 per cent on paid-up capital, as compared with 5.5 per cent in 1952. After writing off the balance of the preliminary expenses (£1566) and providing for the 4 per cent dividend, requiring £4000, a net amount of £608 of the year's revenue remained to augment reserves and undivided profits.

SUB-UNDERWRITING TRANSACTIONS.

During the year, the company had the opportunity of participating in sub-underwriting transactions in respect of new issues or placements of securities in eight companies. The conservative policy of the directors in accepting underwriting risks is shown by the fact that the company was required to take up only 386 shares of 5/ each and £540 of registered unsecured notes in respect of underwriting liabilities totalling £61,504, which, as previously shown, yielded £803 in underwriting commissions.

SURVEY OF ECONOMIC CONDITIONS.

Discovery of Oil in Australia.

Before dealing with the general economic situation in Australia, it is appropriate that some reference should be made to the recent sensational discovery of oil in Western Australia. At the present stage, it is much too early to form any sound assessment of the longer-term prospects of developing oilfields on a commercial scale in this country. The discovery of crude oil in the bore at Exmouth Gulf, however, represents the most important event to date in the long history of oil exploration in Australia, which dates back for over 60 years.

Early reports from the field indicate that a very high grade crude oil was discovered in the bore at a depth of 3605 to 3620 feet, a 25-hour test showing production at a rate of 20 barrels per hour through a one-quarter inch test pipe. These early reports have since been confirmed from authoritative sources, both here and in the United States of America, and it is now apparent that an encouraging basis has been laid for a considerable expansion of exploratory and testing work.

Expert Direction of Operations.

The actual discovery was made by West Australian Petroleum Pty. Ltd., which represents a combination of important American and Australian interests. California Texas Corporation (owned equally by the Standard Oil Company of California and the Texas Oil Company) owns 80 per cent of the voting capital of West Australian Petroleum Pty. Ltd. The balance of 20 per cent is held by Ampol Exploration Limited, 70 per cent of whose capital is held by Ampol Petroleum Limited, a large and well-established Australian oil distributing company, and the balance of 30 per cent by the Australian public. The Australian Bureau of Mineral Resources has also given considerable assistance in exploring the field.

In these circumstances the exploration company has the benefit of some of the most able and experienced technical oil counsel available in the world today. This will ensure that further testing will be carried out on efficient lines and that the results obtained will be assessed and applied on a scientific basis by experts familiar with all aspects of oil drilling, treatment and marketing.

Whilst the first news of the location of oil in Australia created a sensation, and resulted in a speculative boom in the shares of companies engaged in exploratory work, the real value of the field may not be determined for many months and possibly for some years. Certainly, even if the early indications are proved by subsequent tests to confirm the presence of oil in commercially payable quantities, the work of development and production, involving tremendous technical and transport problems, and the establishment of appropriate "cracking" and refining plants, transport facilities, etc., will certainly occupy some years.

Canada's Oil Boom.

In this respect some guidance may be obtained from the experience of Canada, which, during the last few years, has reaped enormous benefits from the development, not only of oilfields, but also of reservoirs of natural gas. The first major oilfield in Canada, the Turner Valley, was discovered in 1914, but no further significant discoveries were made for over three decades. However, in 1947, the great Leduc field, in Alberta, was brought into production, to be followed by the Redwater, in the same province, in 1948, and, later, by a succession of new fields, spread over Alberta, Saskatchewan and Manitoba.

By 1952, no fewer than 500 Canadian, American and other foreign companies were engaged in oil activities. Whereas total annual production in Canada in 1947 was only 7,500,000 barrels from 245 wells, by 1952 it had risen to 90,000,000 barrels per annum, enabling the Dominion to produce about one-third of her own requirements.

Great expenditures were involved in the development of the oilfields and the natural gas reservoirs. For example, a pipeline 1227 miles long was built from Edmonton, in Alberta, to Lake Superior, whence the oil is shipped by tanker through the Great Lakes to industrial regions in the east. This pipeline is to be lengthened by 800 miles and its capacity increased. Another great project is the construction of a pipeline 2240 miles long to carry natural gas from Alberta to Montreal.

Side by side with these developments, it has been necessary to establish great cracking plants and refineries. The wealth poured from the oilfields has given a tremendous fillip to

(Continued on next page)

CLONMORE INVESTMENTS (AUSTRALIA) LIMITED (Contd.)—

Canadian trade and industry generally and has stimulated a considerable growth in population.

Implications for Australia.

Whether Australia will have a similar experience only time will tell, but, if oilfields are developed on a large scale here, the benefits to the national economy as a whole over a period of years should be considerable. Australia is the world's largest user of oil in proportion to population and last year imported 5,753,000 tons of petrol and petroleum oils, of which 937,000 tons was crude oil. All the major oil distributing companies have extended their plants in Australia during recent years and plans for further huge expansions are being implemented. These would undoubtedly be expedited and extended if major oilfields were developed here.

All speculative booms, such as that which has now developed in the shares of oil prospecting companies, inevitably result in many people incurring losses whilst only a very few ever make substantial gains. Consequently, investors should display the greatest caution and discrimination in the purchase of speculative oil stocks.

The more general and permanent rewards which would come in the train of a major oilfield development are those of a national character, resulting from the growth in population and in industrial activity which would be stimulated by any substantial addition to Australia's wealth. Thus, if the early hopes inspired by the discovery in Western Australia are realised, the stocks of all great industrial and trading enterprises should offer increasing investment attractions.

Prospects in New Guinea.

The success of boring operations in Western Australia has also revived interest in the exploratory work which has been proceeding in New Guinea for a number of years. In this connection, it is interesting to read the recently published prediction of Dr. H. G. Raggatt, secretary to the Department of National Development, who has played a leading part in the search for oil in Australia, that a lot more oil would eventually be discovered in New Guinea than would be produced in Western Australia.

Dr. Raggatt added that the Dutch were producing oil on a commercial basis in western New Guinea, and that the geological formations in the Australian section of New Guinea suggested that the oil structures there would be bigger and the yield per unit area larger than in Western Australia.

Australia would undoubtedly benefit very materially from the discovery of large scale oilfields in New Guinea, which would result in a further accession of wealth and lay the basis for even greater economic development in that country and on the mainland.

Better General Outlook.

At this time last year, few people foresaw the extent of the improvement in economic conditions which would take place in 1953. At that stage, the recovery in company profits and dividends which has been manifest over recent months had not begun. The heavy stocks accumulated during the import boom were still blocking the trade stream; costs were swiftly ascending, and taxation rates were high. Moreover, monetary conditions were uncertain, and there were no signs of stability of interest rates.

Since then, quite a transformation has come over the Australian scene, and the period lying immediately ahead appears to present prospects of reasonably stable economic conditions. Many factors have contributed to this changed outlook. One of the most potent of these was the very encouraging increase in primary production, which, with the severe restriction of imports, resulted in a record favourable overseas trade balance.

This in turn was reflected in the increased liquidity of the banking system, permitting adequate finance for the needs of trade and industry. Then, early in the current financial year, the Commonwealth Treasurer announced quite substantial reductions in taxation rates applying to both companies and individuals. These had immediate favourable effects on company profits and dividends and a most stimulating influence on the community as a whole.

Encouraging Wool Position.

It has long been recognised that the greatest single factor influencing Australia's prosperity is the revenue derived from wool. After the record receipts totalling £636 million from this source in 1950-51, when the average price realised for greasy wool over the whole season was 144.19 pence per lb., values receded to half (72.42 pence per lb.) in 1951-52, when the total clip yielded only £307 million, A marked improvement took place in the 1952-53 season, when a larger clip, sold at an average price of 81.8 pence per lb. for greasy wool, produced £40 million.

During the current selling season, a still further improvement has taken place, and, for the four months ending October 31, 1953, realisations increased from 968,000 bales to 1,052,65 bales by comparison with the corresponding period of the previous season. Moreover, the average price realised for greasy wool up till October 31 last was 84.13 pence per lb., as compared with 76.54 pence per lb. in July-October, 1952.

On this basis, and with a considerably larger clip, the ful 1953-54 season is expected to realise upwards of £440 million— provided, of course, that no serious break in prices occurs between now and the end of the season in June, 1954.

World Consumption Rising.

From time to time, fears are expressed regarding the futur level of world consumption of wool, particularly in relation t the increasing use of synthetics. In this connection, Winch combe Carson Ltd. had some interesting comments to offer i their circular dated November 21, 1953. In view of the import ance of the subject to Australia, these remarks are well wort reproducing here:—

> While the average world wool clip continues to show sign of increasing, there is still a steady increase in consumptio which is more than keeping pace with production. Most c the countries which use wool in substantial quantities fo clothing purposes are, so far as the individual is concerne now using more wool than they did in pre-war days. Thu quite apart from the wool which has been consumed in pos war years for rehabilitation purposes, there is an increasin demand from all levels of society.
>
> Australia, which provides the world's chief source c merino wool, is using considerably more wool per head c population than it did before the war. In 1938, Australi used 7.7 lb. of wool per head. In 1950, the consumption ha improved to 11.7 lb. per head.
>
> Overseas, the proportions vary according to the gener financial position of each nation, but the "free" countri have almost all increased their use of wool. The Unite States, for instance, with its huge population, showed a improvement from 2.27 lb. per head to 4.4 lb. per hea during the 1938-50 period.
>
> The Netherlands, Switzerland, and India and Pakista have more than doubled their consumption per head, whi Sweden, Norway, Canada, the Argentine, West German Italy, Poland and South Africa have shown improvement only slightly less degree. In very few instances has the been a falling off in the use of wool and then only to minor extent.

Coming from such an authoritative source, these commen are most encouraging from Australia's point of view. It woul of course, be foolish to ignore the great development which h taken place in the production and use of synthetic fibres a the certainty of further development. Nevertheless, wool h been able to maintain its place in world favour, and there as yet no serious threat of its displacement.

Whilst the overall economic position in Australia appea likely to continue on a satisfactory basis for some time come, the constantly rising level of costs suggests that, soon or later, this country will be faced with a day of reckonin The next twelve months may well prove to be a testing tir in view of the greatly intensified overseas competition to whi Australian manufacturers will be submitted as a result of t progressive removal of import restrictions. This competiti may ultimately have beneficial results as it may force a gener revision of Australia's cost structure, involving a considerat

improvement in efficiency and more conscientious and concentrated efforts on the part of the community as a whole.

Exchange Rate Rumours.

Recognition of the problems presented by our costly production basis has probably been partly responsible for the revival of rumours that some change may be made in the exchange rate between Australia and other countries in the sterling area. The latest of these rumours suggests that the Commonwealth Government may shortly remove the exchange controls as between Australia and the other sterling area countries. The obvious implication is that, if the rate were "unpegged," Australian currency would undergo further depreciation, vis-a-vis sterling.

This might serve as a temporary palliative by furnishing additional protection for local manufacturers, but it would certainly result in the intensification of inflationary pressures, leading ultimately to a crisis, requiring the re-imposition of exchange controls.

However, at the present stage, no sound basis exists for a belief that action along the lines suggested is contemplated by the Commonwealth authorities.

If the recent discovery in Western Australia were to result in the development of a major oilfield, the effects on Australia's economy might be such as to justify the "unpegging" of exchange. In that event, however, the £A would be more likely to appreciate than depreciate in relation to sterling.

Interest Rates May Fall.

An enheartening feature of the investment market in recent months has been the increasing stability of gilt-edged interest rates, which received striking confirmation through the overwhelming success of the recent Commonwealth loan, for which the public subscribed £65.8 million in respect of the £50 million of new money sought. This successful operation has inspired a belief in many quarters that the next movement in interest rates may be downward—possibly when the next Commonwealth loan is launched in March or April, 1954.

Support for the view that some reduction in the Commonwealth loan rate is not far distant is also found in the continuing strength of the public market for Commonwealth loans, in which the average redemption yield is already considerably below the rate of 4½ per cent offered for the last issue.

As far as the share market is concerned, the combination of more favourable factors has not yet found anything like full reflection in the prices of equity stocks. Whilst these have remained firm, turnover has not been abnormally high, and it seems apparent that investors require a little more evidence of continued economic stability before making a general reentry into the market.

A considerable stimulus to investment interest, has, however, been given by the recent revival of attractive new issues by a number of important companies. This is a logical development because of the continuing and quite appreciable increase in population and the need to provide additional industrial and trading facilities to cater for a much enlarged home market.

Abolition of Capital Issues Control.

The expectation is that the New Year will see a greatly increased number of new issues, thus furnishing attractive investment opportunities in the purchase of rights. It is now practically certain that Capital Issues Control, which has been in operation, except for a brief period of suspension, since shortly after the outbreak of war, will cease at the end of this month. That will leave the way open for many companies which had been refused official permission to expand their capital to launch new issues on the public market. It will also encourage other companies which have hesitated to apply for permission to make new issues.

The implications of the abolition of official control of new capital issues go much further than that, and the effects may be far-reaching, This is because, after the end of 1953, there will be no official restraint in regard to interest rates for issues of preference shares, company debentures and registered unsecured notes. Thus, for the first time since before the war, borrowers and lenders will have the advantage of a free market, in which the terms will be governed by the realistic considerations of money market conditions and by open competition.

From what has been said, it will be seen that the coming year presents interesting possibilities for us all, particularly if the early hopes of the discovery of a major oilfield are confirmed. Great problems still remain to be faced, but great national rewards are inherent in their solution, which would set Australia's feet more firmly on the path of progress and prosperity than ever before in the history of this young country.

Joe White Maltings Ltd.

*Adjusted figures from prospectus dated September, 1951.

Operating as maltsters at Ballarat and Collingwood, the company owns a business established in 1905. At both centres, modern plant and equipment have been installed in recent years, and overall output is considerably more than one million bushels per annum.

During the year, rising costs were absorbed in sale prices, and profit margin remained steady in comparison with previous years.

The increase of £98,695 in stock on hand was brought about by the changed policy in the selling terms of the Australian Barley Board. All stock has been bought at a fixed price and malt is sold under contract based on the fixed price of barley.

The following address was given by the Chairman, Mr. T. G. Rowe to shareholders at the Annual Meeting held on October 28:

Before submitting to you a Resolution regarding the Directors' Report and Accounts of the Company, I wish to refer to the death in May last of our then Chairman, Mr. R. A. Marks. He had been a director since the incorporation of the company in 1936. Mr. Marks gave unremittingly of his services in the interests of the company, and his outstanding administrative ability was of utmost value to the board.

Your directors have appointed me to succeed Mr. Marks in the chairmanship of the company and I desire to say I feel greatly honoured and will do my best at all times in the interest of this company.

It is my privilege today to present on behalf of the Board your Directors' Sixteenth Annual Report and Accounts for the year ended June 30, 1953.

Profits and Dividends

The net profit for the year before providing for taxation is £104,232 as against £13,547 for the previous year. The depreciation charge, this year is £31,496 as against last year £30,678. After taking into account the balance of £12,563 brought forward there remains £116,795 to be dealt with.

We have provided for income tax for the year ended June 30, 1953, at the old rate amounting to £44,500 and a contribution to the staff provident funds of £5,000. An interim dividend of 2 per cent. was paid on April 17 last, absorbing £9,237. The tax free dividend from Sydney Woollen Mills Pty. Ltd. of £9,052 has been transferred to the Taxed Profits Reserve and your directors recommend transferring to General Reserves £12,000 and the payment of a final dividend of 5 per cent. absorbing £23,095 which will leave to be carried forward £13,911. In addition to the above dividends your company also paid 2 per cent. tax free dividend on April 17 (making 9% for the year), which now leaves the balance in the Taxed Profits Reserve of £5,759.

Balance Sheet

Freehold land and buildings £325,197 show an increase of £41,439, due to the extensions to the Mill. Plant has increased by £18,076 to £316,665. Stocks of raw materials and finished carpet are £160,782 lower at £207,534, and debtors have increased by £31,970 to £111,794 due to increased sales. Current liabilities have been reduced by £90,251 due principally to the reduction in stocks which has reflected favourably upon the company's bank balance. While the company has had to provide an additional £39,469 for taxation, as stated above the taxation provision has been calculated at the old rate which gives your company an additional £9,700 over provided.

Production

In common with overseas carpet manufacturers we are worried over rising costs, particularly the increased prices we have had to pay for our wool requirements. It may be of interest to you that nearly two-thirds of our costs are made up in value of raw materials, over which we have no control.

I am pleased to state that your directors' courageous poli in keeping the company's employees fully employed during t recession period has now been proved to be wise, and financially success. It was forecasted by the directors at the last annu meeting that the sales for the year now under review were e couraging. I am happy to say that since the balancing peri our sales remain very buoyant, and the outlook for sales for t current year is likewise encouraging.

Additional broadlooms have arrived and have been brought in production, others are in course of erection with further ones arrive. We are aiming at a steady increase in our production.

Tariff Protection

We reported to you at our last annual meeting that durh that year we had made an application to the Tariff Board for protective duty and as advised in the report accompanying t annual accounts now before you, it will be noted a moderate i crease of 7½% in the duty has been granted; this is in additi to the previous revenue duty of 12½%. I can assure you we a preciate this assistance.

Depreciation Charges

There is one matter I would specially like to bring under yo notice and that is depreciation on plant. This charge is relat to the original cost of the plant and to my way of thinking, should relate to the inflated cost of replacing it. However, the is a practical difficulty in doing this as the taxing authoriti disallow any extra charge calculated on a plant replacement valu It is regretted that no alteration in the legislation has been ma to assist industry in this way, but it is of the utmost importan that our industries be allowed and assisted to keep modern, costs of production can be thoroughly efficient.

While on the subject of depreciation, you will have noted has always been the policy of your Board to take into accou depreciation on its buildings and we have taken the amount £42,638 for that purpose. No allowance whatever is now given the taxation department for depreciation on buildings for industr consequently, we have had to meet from year to year the full t on that particular item of depreciation. Considering that m countries grant tax allowance on industrial buildings, I trust leg lation will eventually be passed to meet this necessary requireme in Australian industry.

Board of Directors and Staff

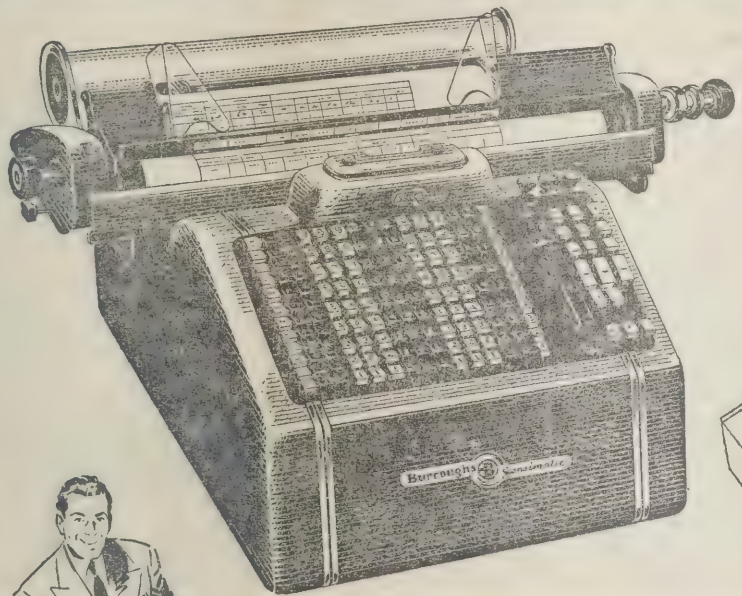
To fill the vacancy on the Board, we have pleasure in announ ing that Mr. Tom L. Baillieu accepted our invitation to join t Board, and I feel sure that you will agree that the Company fortunate in having him with us, and I take this opportunity welcoming him to his first annual general meeting.

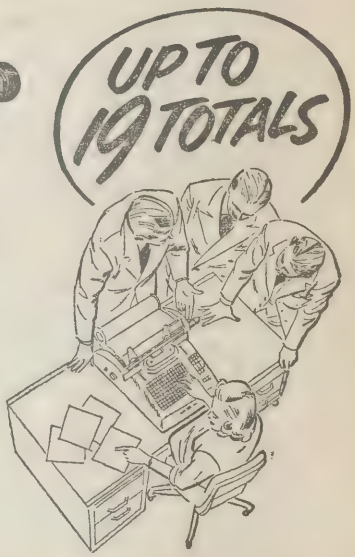
In conclusion, I feel sure you would wish recorded the excelle work of our Executives and Staff, and I also desire to convey all the employees of the company, the Board's appreciation of th capable and loyal services.

Newest of the new!

BURROUGHS SENSIMATIC

brings unmatched accounting efficiency to ALL types of business





Sensimatic's "Mechanical brain"

Revolutionary new principle . . . This "Sense Plate" directs the Sensimatic through any four separate accounting operations in any combination. Just a turn of the knob selects any job! (Any number of "Sense Plates" can be used in a single machine.)

Unlimited in application! Now—with a single Burroughs Sensimatic Accounting Machine — small offices can mechanise all their accounting work. Large Offices can eliminate peak loads by instantly switching several Sensimatics to one job. They can make changes in accounting systems without machine replacements.

Because of its amazing job flexibility and figuring capacity (the machine that can produce 2 to 19 separate totals!) Burroughs Sensimatic can do the work of larger, more complex accounting machines. Yet the cost is surprisingly low!

See the Sensimatic range of five models, series 100, 200, 300, 400, 500 — call the Burroughs man to arrange a demonstration now.

WHEREVER THERE'S BUSINESS THERE'S

Cane-ite Acousti-Tile reduces noise 65% in Holeproof's nylon knitting rooms

Mr. J. PEASE, the Mill Manager, HOLEPROOF (N.S.W.) LIMITED, makes this statement: "The clatter of nylon machines in our knitting room created serious noise problems.

"The overflow of noise disturbed adjoining sections, including staff engaged on exacting finishing work. Now this problem noise factor has been practically eliminated. Cane-ite Acousti-Tile has done a great job for us."

Cane-ite Acousti-Tile ceilings reduce noise by 65% in the biggest and noisiest factories, lessening nerve strain. Increasing production.

The secret—each 12″ square tile unit contains 484 holes which trap two-thirds of noise as it hits the ceiling—prevents it bouncing back.

Cane-ite Acousti-Tile is as quickly and easily installed over existing walls or ceilings as it is in new construction. Ivory surface is repaintable when necessary without loss of sound-absorbing efficiency.

Absolutely no interference with your business. And the cost is surprisingly low.

The following address was given by the Chairman, Mr. G. H. Grimwade to shareholders at the Annual Meeting held on November 19:

On September 4 last your Directors published a statement indicating that the year's trading results were unsatisfactory. While this necessarily had to be in general rather than specific terms as the accounts were still subject to audit, we felt it desirable to take stockholders into our confidence at the earliest possible moment rather than wait some six weeks until the accounts were in their final form and with this action we trust you will concur.

Finance and Accounts

From the close of the previous accounting period we experienced a marked recession in turnover and for rather more than half of the financial year these conditions continued. There was of course no corresponding relief in our expenses and these had to be kept in check by the exercise of very rigid economy. At the same time losses were being incurred as the necessity to revalue stocks in line with lower replacement costs continued, although our total stocks were being progressively reduced. Consequently we reluctantly decided against the payment of an interim dividend. Conditions improved somewhat late in 1952 and have since continued to do so at an increasing rate. We cannot foretell what the course of overseas markets may be, and as the service we render necessitates the carrying at many points of stocks of an extremely wide range of goods and materials, the main cause of this year's unsatisfactory results is a risk that will always be with us. Its effect may be diminished, but never eliminated, and with that warning in mind, our present trading can be considered quite satisfactory. The wholesale drug trade the world over seems to be passing through a period of lean times. Particularly in the U.S.A. and also in the United Kingdom, greatly increased turnovers have not shown an improvement in earning rates, but rather the reverse.

Sales of Associated Houses and their subsidiaries after being up to 10% lower at December 31, failed in the aggregate by only 1.6% to reach last year's record totals as a result of the improvement in the latter part of the year but rates of gross profit declined as a result mainly of stock losses already referred to. Expenses continued to increase although more slowly than last year and since the close of accounts some most welcome relief is forecast in the Treasurer's Budget speech, as in the accounts before you provision for taxation has been made at the rates formerly prevailing. On this basis the consolidated profit amounts to £176,627 compared with £366,736 last year and that enables us to recommend a dividend of 4%, and to this we recommend the addition of a further 2% out of accumulated profits making 6% for the year. Your Directors feel fully justified in drawing on these profits to that extent because of the abnormal losses which this year's trading profit has been called upon to bear, the adequacy of the reserves and carry forward as shown in the consolidated balance sheet and the marked improvement in trading since the year closed.

As regards the balance sheet, you will note a decrease in stocks amounting to £1,018,000 and a corresponding reduction in our current

(Continued on next page)

DRUG HOUSES OF AUSTRALIA LIMITED (Contd.)—

liabilities due mainly to an improvement in our position with our bankers amounting to no less than £752,000. Our financial position is now probably stronger than ever before in marked contrast to the position disclosed in my report of two years ago.

Such other changes as appear in the Balance Sheet do not call for any comment from me.

Expansion

I am pleased to report that our new factory in Perth is almost completed and will be occupied shortly while substantial progress has also been made with our Adelaide factory. In New Zealand we have established a subsidiary of Elliotts & Australian Drug Pty. Ltd. for the compounding and subsequent manufacture of that company's wide range of lines for rural industry.

To improve our service to retail pharmacists in country areas, branches have been opened during the year in a number of important provincial centres in Victoria and in one in Western Australia.

Directors and Administration

It is with the greatest regret that we have to record the death of Dr. Cecil Purser, a Director until his retirement last year since 1931, and of Mr. J. M. Edwards, the Managing Director of our London Company. Both of these gentlemen rendered long and valuable service in their respective spheres and we wish to record our sympathy to their relatives.

The Directors to retire by rotation in accordance with our Articles are: Messrs. J. B. Storrar, P. S. Furler, N. V. Kerr and G. H. Grimwade. All are eligible for re-election and offer themselves accordingly.

During the year Mr. P. A. Berry visited Great Britain and the United States in connection with certain technical aspects of the Company's business and Mr. N. V. Kerr has just returned from a tour of investigation of the latest trends in wareehouse construction. Mr. P. S. Furler is at present abroad in connection with the Adelaide Company's range of penicillin preparations.

Mr. M. W. Willington retired from the Board of our Western Australian Company due to ill health, and Mr. R. W. Maxwell resigned to enter business on his own account.

Our Secretary, Mr. M. G. Hassell, has been appointed to succeed Mr. Willington as Managing Director of the Western Australian Company and will take over his duties there in December. We wish him every success in this important promotion. In the meantime the Company has been in the charge of Mr. A. P. Benson as Acting Managing Director.

I am pleased to report that Mr. H. L. Brisbane has accepted the Chairmanship of the Perth Company and with his wide experience will be a very great source of strength to the Board.

I am also pleased to advise that Mr. D. M. Ferguson, a partner of our Auditor, Sir Edwin Nixon, has consented to act with the Committee responsible to the Board of your Company for control of finance and accounting matters.

Staff

The difficult trading conditions have borne heavily on the staff of our Operating Companies from the Executive Directors downwards right throughout those organisations. The year's results are in spite of their best efforts and insofar as they are unsatisfactory the cause is entirely beyond their control. I wish to thank them for their loyalty and co-operation and to express the hope that the more stable conditions which now promise will ease their burden and add to the real value of their rewards.

Carlton & United Breweries Ltd.

Reg. Office: 16 Bouverie St., Carlton, Vic. **'Phone:** FJ 0431. **Directors:** N. J. Carson (Chairman), J. M. Baillieu, M. H. L. Baillieu, Edward Cohen, G. G. Coulter, A. R. Creswick, Frank Levy, R. T. Morell. **Auditors:** Wilson, Bishop & Henderson; Davies, Boldeman & Co.

46th Year ended June 30, 1953. Meeting October 29, 1953.

Consolidated profit rose by £55,470 to £509,093, the increase being due to greater property income and a saving in land tax, rather than from brewing operations, which were adversely affected by rising costs. A steady dividend of 6¼% was again paid on the ordinary and "Z" shares, leaving over £140,000 for reserves.

	Carlton & United and Subsidiaries.			Carlton & United Breweries Ltd.

*Incl. £40,241 surplus on sale of freehold in 1950, and £5,371,484 asset revaln. surplus in 1951; debited in 1951 with £2,925,000 bonus issue of £1 "Z" shares; credited in 1953 with £3,417 profit on sale of assets.

†Adjusted for £2,861 taxn. overprovided.

Beer production rose by two million gallons to over 47 million gallons. Excise paid at the rate of 7/2 per gallon amounted to £15.9 million.

The organisation, which owns 7.3% of the hotels of the State, is rebuilding two of its city hotels at a cost of £750,000.

Ordinary shares are not held directly by the public but mostly by the following companies listed on the Stock Exchanges:

Melbourne Co-operative Brewery Co. Ltd.
Carlton Brewery Ltd.
Castlemaine Brewery Co. Melbourne Ltd.
The Foster Brewing Co. Ltd.
The Shamrock Brewing Co. Ltd.
McCracken's City Brewery Trust Ltd.

The "Z" ordinary shares are non-voting and are entitled to rank pari passu with ordinary shares in all dividends. In a winding-up the "Z" shares would rank pari passu with ordinary shares for return of capital but would not participate in surplus assets. Net tangible asset backing is £41/5/1 for each £1 preference, £3/9/7 for each ord., and £2/3/6 for each "Z" ord. share.

Carlton & United Breweries Ltd.

he Chairman, Mr. N. J. Carson, addressed the Annual Meeting on October 29, as follows:

lthough the net profit for the year at £483,490 showed an in- e of £66,703 on last year's figures, the profit on actual brewing tions showed a considerable decline, particularly towards the f the twelve months when the full impact of increases in raw ial prices was felt. Such increases were fortunately offset creased income from properties, a first dividend from accumu- funds of a subsidiary, and a substantial saving in taxation o the abolition of Federal Land Tax. However, these three s were peculiar to the year under review and could not be ted in the near future to make up a declining income in what r prime sphere of operation, the brewing of beer.

Return on Funds

arge companies in general and brewing companies in particular requently subjected to criticism on the score of large profits. gate profits are, of course, meaningless. A profit of £1 million d by a company with a capital of £10 million is proportionately eater than a profit of £1,000 made by a business with a capital 0,000. Yet large profits are too frequently looked at askance e Australian public without any attempt to relate such profits e amount of money invested in the business.

the financial year just past this Company's net profit of 90 represented a return of only 4½% on shareholders' funds— turn which can be obtained from risk free Commonwealth s. As a contrast a recent published survey of Company profits d that the average return on shareholders' funds in Australia 3%, whilst in U.S.A. and Canada it was 12% and 14% respec-

is essential that companies make profits and equally essential those profits show an equitable return on the funds actually in the business. We in Australia must realise that size in is not something to distrust and that with the country's ex- on larger and larger industries will develop, and that balance s will be written in bigger and bigger amounts. Yet in the of this Company the net profit has decreased by £45,403 against 9, whilst funds employed have almost trebled and production ased by approximately 100%.

Raw Materials and Prices

ne of the besetting problems of the industry has been the cost of raw materials and wages. By way of example, the to this Company of its principal raw material, malted barley, was 12/4½ a bushel in the previous financial 12 months, rose 17/7½ to 23/7½ during the current financial year. The last t represents a staggering cost increase of £455,000 on the Com- s annual requirements. It can readily be seen that, coupled other sharply increasing material and operating expenses, a cost increase could not be borne without a corresponding se in the selling price. As shareholders will no doubt recall, a price increase was granted after very considerable delay ptember last. This it is expected will stabilise the price ture, and with the levelling out of commodity and wage levels y be hoped that further price increases will not be necessary e foreseeable future.

is of interest to note that of the retail selling prices of the any's products, the Company receives in gross revenue less twopence in every shilling. Out of this twopence, it must pay ost of manufacturing and distributing the product and make fit. The actual net profit on one shilling's worth of draught s less than one-eighth of a penny, while the net profit on a ottle is approximately one-half penny. It may be noted in g that excise duty and licensing fee absorb 32 times this nt, or 1/4 out of the 2/7.

Production

oduction during the year under review has increased in a satisfactory manner, and the Company is now in the happy n of being able to supply the full demand for its products, he exception perhaps of bottled beer at seasonal peak. This en made possible by extensive plant additions and improve- carried out during the last twelve months in the Company's l production units. A large 1,000 dozen per hour bottling ow being installed, and additional fermenting and storage es about to be constructed will ensure in the future full at all times.

ctual production for the twelve months ending June 30th, 1953, ,037,300 gallons, an increase of nearly two million gallons on ar's output. In this production, bottled beer has risen from ver five million dozen to approximately seven million dozen. t moment, bottled beer output stands at more than 230,000 per week, or the equivalent of twelve million dozen per u.

Whilst limited production has up to now prevented any develop- t of overseas markets for the Company's products, it is evident ich a demand exists due to the world-wide reputation of roducts. It is intended in the immediate future to thoroughly such potential markets in the hope of adding another to t of Australia's exportable commodities. However initial rations tend to show that the cost factor may deny these s to us.

Hotels

ce the lifting of building controls your Company has been implement its policy of improving its hotel properties and the financial year £150,000 was spent in additions to and ernizing such properties. During this period plans were ed for the rebuilding of two city hotels at a cost of £750,000 and work has commenced in both cases. It must be emphasised that present day building costs must play an important part in determining the future of many rebuilding schemes as such costs would bring in their train the necessity for accommodation charges which the public may not be able or willing to pay.

Economic Role

We as a Company are proud of the value of the industry to the economic life of the community generally. In primary products alone we are direct purchasers each year of over two million pounds worth of goods, while our requirements of general supplies from other industries are in the vicinity of three million pounds. We are direct employers of over two thousand men, with an annual wage bill of £1,904,000. Our tax bill for company tax, payroll tax, state land tax, etc., is over half a million pounds and for the year under review excise duty on the Company's products yielded the huge amount of £15,976,223. This duty, of course, the Company pays in cash before the product leaves the brewery, and to do so requires us to finance a standing amount of approximately half a million pounds for the purchase of excise stamps.

Conclusion

The continued excellence of our product could not have been maintained nor the increased output achieved without the skill, efficiency, loyalty and enthusiasm of the executive and staff, and to them I wish to tender the thanks of my co-directors and myself. In the hands of such personnel we have every confidence in the future of the Company.

PLAN FOR PROBATE

IT PAYS TO PLAN FOR IT NOW!

State and Federal Duties can be heavy charges on your estate, reducing the assets you have built up for the security of your family and dependants.

Here are a few examples of the death duties payable on estates passing to a widow and children:—

Net Estate of £10,000	*Duties £728*
Net Estate of £25,000	*Duties £3,448*
Net Estate of £50,000	*Duties £11,190*
Net Estate of £100,000	*Duties £36,062*

CAN YOUR ESTATE CARRY THE BURDEN OF DEATH DUTIES?

Why not plan your family's future security in consultation with National Trustees Company? The intelligent planning of your estate's affairs will ensure a definite financial gain.

You are invited to call and discuss the problems of your own estate with one of our experienced officers without obligation of any kind.

NATIONAL TRUSTEES

EXECUTORS & AGENCY COMPANY OF A/ASIA. LTD.

33rd Year ended June 30, 1953. Meeting November 30, 1953.

Trading conditions improved after last year's fall in wool values, and the slump in the woollen textile industry. A profit of £506,054 was achieved, and an 8% dividend was paid after the omission of a dividend in 1952.

There was also a substantial recovery in the financial position, as shown by reduction in stock by £2.1 million and the corresponding reduction of £1.9 million in overdraft.

*Profits and loss are stated after adjusting outside s/holders' interests.

Operating mainly through subsidiaries, the company owns a large group of manufacturing, processing and merchandising businesses. Australian production activities have been reorganised under the following four divisions—

Wool Division.—Handles wool buying, sorting, scouring, carbonising and trading.

Felt and Carpets Division.—Manufactures and handles woollen felt, hairfelt carpets, textile wastes and upholstery supplies.

Textile Division.—Activities range from combing and spinning to weaving and finishing, also clothing manufacture.

Footwear Division.—Production is being concentrated on popular demand rather than fashion footwear.

A separate subsidiary company operates in New Zealand, and, in addition, there is a substantial shareholding (41.33%) in Felt & Textiles of South Africa Ltd.

The following statement by the Chairman, Mr. R. J. Webster, was circulated to shareholders with the Annual Accounts:

Before reviewing the Company's activities, I would like to refer to the substantial recovery in the financial position and in profit earning during the year under review.

Shareholders will recall the loss for the year ended June 30, 1952, which, in the main, resulted from the drastic fall in wool values and the world-wide catastrophic slump in the woollen textile industry during 1951. As a result of this loss, for the first time in its history, no ordinary dividend was paid to shareholders in respect of the year ended June 30, 1952. It will be gratifying to shareholders to note from the accounts for the year ended June 30, 1953, such a substantial recovery in the profit-earning position and to read of the recommendation of the Board to declare a dividend of 8% for the year.

It is appropriate to refer briefly, at this stage, to the profit-earning history of the Company for the last fifteen years which can be seen at a glance from the following figures:

Year ended 30th June	Paid-up Capital	Consolidated Net Profits After Tax	Ordin Divide Rat
1939	£831,914	£94,184	10%
1940	869,247	159,613	10%
1941	1,183,786	156,674	10%
1942	1,419,839	193,861	10%
1943	1,419,839	186,208	10%
1944	1,419,839	208,663	10%
1945	1,490,312	214,454	10%
1946	1,490,312	218,506	10%
1947	1,812,890	301,953	12½%
1948	3,294,783	374,340	12½%
1949	4,349,674	564,783	12½%
1950	4,349,674	597,080	12½%
1951	5,299,565	672,851	12½%
1952	5,299,565	473,577 Net Loss	—
1953	5,299,565	506,054	8% (Recomme

The improvement in the Company's net profits for 1953 is due the better trading conditions and results and to extensive re-anisation within the Company and its subsidiaries. Felt & Tex-s of Australia Ltd., as an organisation, had developed very idly over a comparatively short period rather than as the out-e of a long range integrated plan. This inevitably resulted in e weaknesses in the structure which became apparent under the nged business conditions of the last two years. To assist in reorganisation of the Company the Board sought the advice of D. Scott & Co., the well-known Management Consultants. As a lt of the recommendations made by these consultants and of r Board's study of the most suitable form of organisation for Company, our Australian production activities have been ded into four Divisions—wool, felt and carpets, textiles, and wear—each of which is under the administrative control of a eral Manager, who is responsible to the Managing Director for operations of his Division; in turn, the managers of each unit hin the respective Divisions are responsible to their General nager. This divisional organisation provides for clearly defined s of authority and responsibility, and has greatly facilitated administration of the company. The new form of organisation adopted in February, 1953, and is a pronounced success. The ediate results have in no small measure contributed to the im-ved position of the Company, including a substantial reduction verall stocks and a marked general improvement in the financial tion.

Your Board has also introduced into the organisation modern hods engineering practices and procedures. This also is being e with the advice and under the supervision of its Management sultants. The application of these modern methods engineering ctices to all our manufacturing operations will take time, but ady substantial progress has been made with the work which, t is developed, will result in greatly increased production and uced costs of manufacture.

During the year, important additions to the executive staff e made in the woollen and worsted section. The Managing ector visited England and engaged Mr. S. R. Simpson as Man-r of its Woollen and Worsted operations, and also Mr. J. H. lor as Manager for the finishing department at Tottenham. Both pointees come to us with a background of extensive experience eading English mills and with an intimate knowledge of the uirements of the worsted and woollen trades in their respective eres of operations.

Many changes of both a minor and a major character have been le by Management during the year. They are too numerous to r to in detail in this survey. Many changes of both a minor a major character yet remain to be made. The problems which confront us have to be tackled in an orderly manner, and plans lo this are well in hand.

Up to the present, the Board has devoted its attention to the rganisation of the manufacturing and distributing side of the pany's activities. At the appropriate time, it intends to review financial structure with a view of taking whatever steps may ecessary to strengthen and improve the Company in this direc-

One other major problem to which the Board has given atten-during the year is the method of executive remuneration in tralia. The Board has adopted a policy of remunerating man-rs on a uniform basis providing for a fixed salary and incentive us related to results. The arrangement is that no bonuses are unless the Company as a whole earns profits. Under this sys-the managers have the incentive of producing results on a e determined by the Board in their respective undertakings. commissions on profits will be paid.

Financial.

The Consolidated Accounts for the year show an aggregate net it of £506,054 after providing £366,107 for depreciation and ,979 for taxation. This profit compares with a loss in the eding year of £473,577. Shareholders will recall that at June 1952, to offset the aggregate debit of the Subsidiaries' Profit Loss Appropriation Accounts a sum of £210,520 was trans-ed from the Special Reserve account in the Parent Company ks and credited to an account styled "Reserve for Losses in sidiary Companies." This transfer had the effect of providing ull in the books of the Parent Company for the aggregate debit nce on Subsidiary Companies' Profit and Loss Accounts.

During the year now under review the total of profits earned subsidiaries more than overtook the above debit balance and sequently the Parent Company's provision of £210,520 for Sub-aries' Losses was no longer required. As far as the Parent pany is concerned this amount now reflects profits earned by subsidiaries during the year ended June 30, 1953, and it was efore decided that it should be transferred to the credit of the it and Loss Appropriation Account of Felt and Textiles of tralia Limited. I would emphasise that this transfer is an rnal accounting matter only and does not affect, in any way, aggregate profit figure of £506,054 for the year ended June 30,

The Parent Company's Special Reserve has been increased to ,000 by the transfer of £70,520 from Profit and Loss Appropria-Account. This Reserve is available to meet any unforeseen ingencies.

Inspection of the Balance Sheet figures shows the striking im-ement in the overall financial position as compared with the ion in the last accounts placed before you as at June 30, 1952. parison of the corresponding figures in each financial year is ollows:

	June 30, 1952	June 30, 1953	Difference
Net result after tax ..	£473,577 Loss	£506,054 Profit	£979,631 Incr.
Total current assets	£11,019,682	£9,119,980	£1,899,702 Decr.
Total current liabilities ..	£5,520,755	£3,534,563	£1,986,192 Decr.
Bank overdrafts ..	£3,755,625	£1,867,406	£1,888,219 Decr.
Stocks	£8,049,031	£5,873,619	£2,175,412 Decr.
Debtors	£2,642,460	£2,933,771	£291,311 Incr.

The decrease in stocks and increase in debtors is satisfactory when viewed in the light of the large volume of business done by the Company and its subsidiaries.

Wool Division.

This Division comprises the operations of our wool buying, wool sorting, scouring and carbonising and wool trading sections, and operates through plants in New South Wales, Victoria and South Australia. The Division purchases and processes all wools for our own manufacturing requirements and, in addition, conducts a large business in commission scouring and carbonising, and in wool trading with overseas markets.

In the earlier part of the year, the Division felt the impact of conditions in the wool trade, but in later months the increased demand for wool for our own requirements was accompanied by a revival of trade demand. At present all plants are working on satisfactory volumes of production—in some cases 24 hour shifts are required to meet demand.

The General Manager of the Division is Mr. J. D. Kerr, who has been intimately associated with the main businesses of this Division since their establishment.

Felt and Carpets Division.

This Division consists of our woollen felt mills in New South Wales and Victoria, our carpet factory at Tottenham, Victoria, our needled felt mills in New South Wales, Victoria and Western Australia, our textile wastes and upholstery supplies factories in Sydney and Melbourne, and two other ancillary Melbourne factories.

The new felt mill at Granville, New South Wales, is now in full production, and we are concentrating there on the manufacture of "Marbled Feltex." The present demand for our felt floor coverings is strong and the market potentialities are encouraging.

The carpet factory at Tottenham, Victoria, operated by our subsidiary company, British Australian Carpet Manufacturing Co. Pty. Ltd., is now producing a wide range of Axminster and Wilton carpets. During recent months, production of broadloom axminster goods has been commenced and the demand for all our carpets is clamant with the factory production booked out for a long way ahead. Recently, the factory was visited by the Technical Director of The Carpet Manufacturing Co. Ltd. of Kidderminster, England, our associates in the Australian enterprise, and he gave us a valuable report with recommendations for the future, and commented most favourably on what has been done to date. The prospect for this industry is bright, and we can look for further satisfactory developments in the future.

Since June 30, 1952, the Tariff Board has increased the protective duty on English carpets from 12½% to 20%, and this added protection is a source of further strength in the Australian carpet industry.

Mr. L. B. Jacobs, who has had a long experience of administration in the Company, is General Manager of this Division.

Textile Division.

Included in this Division are the activities ranging from the combing of wool tops through the spinning of woollen and worsted yarn to the weaving and finishing of woollen and worsted cloths and the manufacture of clothing. These activities are all undertaken in subsidiaries located in Victoria and South Australia, and the Division is under the General Managership of Mr. C. Blackburn, who has been associated with some of these activities since their inception.

It was in these sections that the Company sustained the heaviest trading losses through the fall in wool values in 1951, but these losses were fully brought to account in the stocktaking at June 30, 1952. During the year under review, steady progress has been made in the Division, but some sections are not yet working to capacity, and although the Division is trading at profitable levels much remains to be done to bring these sections to full efficiency. Shareholders will appreciate that of necessity heavy stocks in the weaving and clothing sections at June 30, 1952, meant reduced orders for the combing and spinning sections until those stocks were absorbed. It was not until the second half of the year under review that this was effected and the benefit of increased production felt in the combing and spinning sections.

As mentioned above, experienced management for the weaving and finishing sections has been obtained from England, and has played an important part in improving the position.

Footwear Division.

All the footwear factories of the organisation in New South Wales, Victoria and Western Australia are included in this Division, of which the General Manager is Mr. H. Goodman.

Our Footwear Division was, on the whole, the least affected by trade conditions in 1951, but valuable lessons were learnt from the experience in that period. As a result, we have now entered on a policy of specialisation by manufacturing units in this Division and the resultant economies in production and increase in operating efficiency are gratifying. Our footwear factories are now, in the main, operating satisfactorily, including a country unit in New South Wales, which was closed down in 1951, but has now been re-

(Continued on next page)

FELT & TEXTILES OF AUSTRALIA LIMITED (Contd.)—

opened. The object of the Company's footwear operations is now to produce in specialist factories types in popular demand rather than fashion footwear and to use as much felt as possible.

New Zealand.

Felt and Textiles of New Zealand Ltd. showed a satisfactory trading profit for the year ended March 31, 1953, and maintained its customary 8% dividend on ordinary shares. In general, the trading experience in New Zealand has been on similar lines to that in Australia—a general recovery in demand following the quiet period in 1951-52 and a clamant demand for the products of the floor covering factories. The financial position in New Zealand has also shown a most satisfactory improvement with substantial reductions in stocks and bank overdrafts.

South Africa.

,Felt and Textiles of South Africa experienced a recovery in trading conditions for the year ended June 30, 1953, and earned a satisfactory net profit for the year. In South Africa, as in Australia and New Zealand, the success of the carpet subsidiary has been outstanding.

General.

During the absence of the Managing Director overseas on business for the Company and during the period of his subsequent illness, the Board appointed Mr. H. W. Rowden to act as Chief E cutive Officer of the Company. The Board wishes to record great appreciation of the splendid work carried out by Mr. Row for the Australian organisation at great personal inconvenienc himself.

The year ended June 30, 1953, can be regarded as a perio substantial recovery from the reverses of the previous year. Vie in comparison with the preceding year, the recovery in profit e ing and the improvement in the overall financial position of Company are gratifying. No abnormal profits were earned du this year, nor could the profits disclosed be considered to any preciable extent as due to a recovery of amounts written of previous years.

The position of the Company since June 30, 1953, has contin to improve. For the first quarter of the current year, the Comp has earned estimated net profits before tax, equivalent to an nual rate in excess of £1 million.

The current year has seen further improvement in the finan position. At the end of October, bank overdrafts were ne £650,000 less than at June 30, and stock in trade at September 1953, was substantially lower than at June 30.

Taking everything into account, the position of the Comp today is vastly different to that of 12 months ago. As we now it, the financial position of the Company is sound, the profit-e ing capacity is steadily improving, and the reorganised adminis tion is better equipped to meet the problems of the future.

E. A. Machin & Co. Ltd:

The following report by the Chairman, Mr. E. A. Machin, was circulated to shareholders with the Annual Accounts:

Trading Result.

The net profit for the year, after provision for taxation, was £131,309, which is only £3,471 lower than last year's record. This was mainly due to the lower turnover occasioned by the general downward trend which operated for the earlier portion of the year under review.

After providing for dividend of 20% on all issued shares in the Company requiring £63,000, an amount of £68,000 was transferred to General Reserve Account and the balance of Profit and Loss Appropriation Account to be carried forward to next year is £2,509 as against £2,306 brought in. These figures show that the result is again very satisfactory.

Owing to the fact that stock is now more readily availabl were able to reduce this item substantially.

A contract has been entered into for the complete rebu of portion of the Elizabeth Street premises and this, when pleted, will double our merchandising area. Our freehold pr at North Melbourne, which was purchased during the previous is now occupied by the Company, and the benefits ther should be felt during the current year.

Current Year.

Current year's sales to date are very good and we lool ward confidently to a satisfactory result of the present trading.

Your Directors desire to place on record their appreciati the co-operative spirit and efforts of the Company's emp during the year.

†Adjusted for £7,412 tax overprovided.

The merger in 1951 of Edments Ltd. (including the subsidiaries, Dumbrells (Jewellers) Pty. Ltd., of Melbourne, and T. Gaunt & Co. Pty. Ltd., of Melbourne, Ballarat and Hobart) with Prouds Pty. Ltd., of Sydney, created a chain now numbering twenty-one retail stores situated in all capital cities of the Commonwealth and many important provincial centres.

The sales range includes jewellery, china, crystal, glassware, watches, clocks, silverware, cutlery, home furnishings, kitchenware, stationery, handbags, brushware, shaving and smoking requisites.

Stocks were £198,430 lower and overdraft fell by £72,463, debtors were £25,085 higher, due to greater use of lay-by facilities.

Sales for the first quarter of the current year have shown a steady increase over the corresponding period in 1952.

The Chairman (Mr. G. Proud) delivered the following address to the Annual Meeting on October 2:—

The consolidated net profit, after providing £14,144 for depreciation on fixed assets and £92,288 for taxation, amounted to £106,802. This is £23,802 less than last year, but is regarded as satisfactory. The unappropriated profit remaining at June 30 now stands £84,728 as against last year £49,419.

Taxation

The taxation provision is calculated at the old rates. It is estimated that at the new rates £22,000 has been over-provided. If this £22,000 is added to the net profit for the year after taxation the result is very close to the previous year.

Dividend

In view of the decline in net profit before taxation your Directors deemed it prudent to recommend to stockholders that a final dividend of twopence (2d.) per stock unit be paid which, when added to the interim dividend of twopence (2d.) per stock unit makes a total of fourpence (4d.) per stock unit for the year.

Movement of Fixed Assets

During the year fixed assets increased by £54,392. The main proportion of this capital expenditure was incurred in fitting out the new shops opened by Edments and in extending the air-conditioning plant in Prouds, Sydney, to include all the trading floors of that building and the adjoining building occupied by Edments.

Stocks on Hand

Stocks on hand decreased by £198,430. This decrease in stock is reflected in the improved financial position of your company. The debtors increased by £25,085. This was caused by more customers using our Lay-by service which costs nothing in interest and ensures the customer of getting her purchase at to-day's price.

Financial Position

Our bank overdraft was reduced by £72,663 and we owe our creditors £64,782 less than last year.

Import Restrictions

Your company's sales suffered from the import restrictions imposed by the Government. We read with a great deal of pleasure of the further easing of these restrictions and look forward to their complete removal. China and earthenware and watches and clocks which are two of our largest departments have been in very short supply. This type of merchandise is not produced in Australia and therefore any easing in these imports will help greatly to increase sales.

Sales Tax

The recent easing of sales tax on many lines sold by us should increase sales. This heavy impost of 50% and 33⅓% in sales tax priced many articles beyond the public's purse; such departments as crystal and plateware were most noticeably affected. The sales tax reductions will in due course release substantial funds previously tied up in stocks, thereby increasing the liquidity of your company and making finance available for further expansion.

New Stores

I have pleasure in reporting that Prouds are opening in October a modern jewellery establishment in the Hotel Australia, Sydney. During the year Edments opened new stores in Goulburn, Kalgoorlie, Wagga Wagga and Albury. All these openings were successful and the returns from these stores have been most satisfactory.

Extensive alterations were carried out at Edments store in Adelaide and a new shop front has been installed at the Edments Melbourne store. You may have been aware that two Edments stores were operating at Prahran, a suburb of Melbourne. Your Directors decided that it would be better if business was concentrated in one store and so one store has been closed. The result has been most successful, especially from the net profit angle. Several additional sites are now being negotiated for future development.

Future Prospects

Our sales for the three months of this financial year have shown a steady increase over the corresponding period last year. Your Directors are confident of a profitable trading result for the current year especially in view of the decreased sales tax, increased import quotas and the opening of new stores.

Flexdrive Industries Ltd.

Reg. Office: 426 Mount Alexander Rd., Ascot Vale. **'Phone:** FU 2291. **Directors:** C. R. Rose (Chairman), J. J. McHale (Manag. Director), M. W. Johns. **Auditor:** D. McL. Ferguson (Edwin V. Nixon & Partners).

1st Year ended June 30, 1953. Meeting November 16, 1953.

First results as a public company show a profit of £20,029, which was £5,651 lower than the previous year's result, due partly to a reduction in profit margins to secure initial equipment business. Earning rate on capital was 16.7%, out of which a dividend at the rate of 10% per annum was paid.

The following address was given by the Chairman, Mr. C. R. Rose, to shareholders at the Annual Meeting held on November 16:

The Profit and Loss Account covering the period from the date of incorporation of the Company to June 30, 1953, shows only a small profit of £2,127 because it only brings to account a dividend and interest received from the operating subsidiary companies. However, the consolidated accounts of the Company and its subsidiaries show a net profit for the year of £20,125, from which has been or will be paid dividends totalling £2,960, leaving a carry forward of £17,165.

Your Directors have declared a dividend on the ordinary stock units at the rate of 10% per annum for the 2 months to June 30. In a full year a dividend at this rate will require £12,000 with the addition of the dividend on preference shares in Flexible Drives Pty. Ltd. a total of £12,960. It will thus be seen that the consolidated profits for the year amply cover this figure and allow approximately 36% to be retained to further strengthen the finances of the group.

Profits Prior to Acquisition.

When the ordinary shares in Flexible Drives Pty. Ltd. were purchased by this Company, the former Company and its subsidiary, F.D. Instruments Pty. Ltd., had accumulated profits and reserves. These profits are being treated in the accounts as purchased with the shares, and will not be used for the payment of dividends to the stockholders of Flexdrive Industries Limited. As they are received by this Company, they will be used to write down the cost of acquiring the shares in the subsidiary in the balance sheet of Flexdrive Industries Limited. It will be seen in the accounts that an amount of £20,000 was received by this Company prior to June 30, 1953, and has been so treated in its accounts. Included in the profits and reserves acquirement is an amount of £6,122 of tax paid profits which, when replaced by the current profits, will be transferred to the holding company and will be available for the payment of tax free dividends to its stockholders.

Balance Sheet.

Reference to the Consolidated Balance Sheet will show that the Company is in a strong financial position, and that a substantial credit was held in the bank. This is to a considerable extent due to the fact that the amount obtained by public share issue two months before the close of the year had not been put to full use. However, since the balance date further plant has been acquired by the subsidiaries, which it is anticipated will reduce costs and increase output and turnover.

Subsidiary Company — Flexible Drives Pty. Ltd.

Trading: From a comparison with the prospectus figures it will be observed that the net profit for the year ended June 30, 1953, was less than the previous year. This was due to a change in our sales policy to obtain initial equipment business at a greatly reduced profit margin. With increased production both initial equipment and replacement orders will be covered in the forthcoming year.

Bright Outlook: The current financial year has opened very satisfactorily and the future prospects of the Company are encouraging. Sales since the close of the financial year are well in excess of the same period last year, the month of October reaching an all-time record. With the availability of raw material in tions are that the factories will be working at full pressure many months. Large advance orders are held for the manufa of initial car equipment for the automotive industry.

No Price Increase.

By constantly improving our manufacturing techniques have been able to absorb the heavy increase in the prices of materials and the substantial rises in wages which have occ during the year and to still maintain our 1951 selling price some instances 1951 prices have been reduced.

New Building.

Store: Our new store, consisting of an area of over square feet, was completed in December, 1952, although not occupied until the latter end of the financial year. This imp ment was a much-needed one, and it is hoped the additional will be the means of achieving greater efficiency in the handli direct sales and the expediting of deliveries.

New Premises.

Industrial Drives Division: To cope with the marked inc of trading in industrial equipment, we have recently acquired tional rented premises covering an area of approximately square feet at 103 Buncle Street, North Melbourne. This se handles both the manufacture and service of a comprehe range of Industrial Drives, and is well laid out for high production.

New Plant.

During the current year orders have been placed for addit plant. As this becomes productive it will not only increase o but also eliminate most of the work at present being sub-contra thus enabling us to function more efficiently as a self-cont unit.

Export Trade.

With the availability of raw material we have exploite export market to the fullest extent, and have met with great cess. Although reduced prices were needed to capture these kets, the increased volume obtained from this source has en us to reduce costs quite considerably for goods supplied to markets. Export territories now include New Zealand (our la buyer), Singapore, Suva, South Africa and Indonesia. Our prehensive cataloguing and competitive prices have aided us siderably in this field.

Subsidiary Company — F.D. Instruments Pty. Ltd.

This Company experienced a difficult year due to a rec in tractor sales. Production was concentrated mainly on the facture of tractor instruments and the production changeov new lines was not felt until the latter end of the financial With the installation of additional plant for the manufactu new lines, and with orders on hand totalling more than dou last year's turnover, a successful year is anticipated.

In conclusion, I wish to express our appreciation of the e of our staff and employees of both companies, and in part the work done by our Managing Director, Mr. J. J. McHale.

Glazebrooks Paints and Chemicals Ltd.

Holding Company in Paint Manufacturers.

Office: 269 Williamstown Rd., Port Melb. **'Phone:** MJ 1531. **Directors:** G. M. Hume (Chairman), Sir George Wales (Vice-Chairman), J. M. Keddie (Manag. Director), E. H. Clark, E. Cohen, E. C. Coverdale, D. W. Griffiths, E. L. Jones. **Auditors:** Holmes & McCrindle.

5th Year ended June 30, 1953. Meeting October 23, 1953.

Turnover was a record, despite increased competition in industry. Profit was £11,304 higher at £83,617, and divi- d was raised by 1% to 10% on increased capital.

Sales for the quarter ended September, 1953, are higher n the same quarter in 1952.

The Chairman (Mr. G. M. Hume) delivered the following address at the Annual Meeting on October 23:—

It gives me great pleasure to be able to present to you a report of another successful year for the twelve months ending June 30, 1953.

After providing £104,832 for depreciation, amortisation and taxation, the company made a net profit of £83,770, a very satisfactory result, considering that in many ways this was the most difficult year yet for the management. Turnover for the year was higher than last year, but some of the benefit from this was offset by increased operating costs. Portion of these costs were due to the expanding of our organisation to take care of the development of new products and additional markets. While we believe that to secure results it is necessary to invest ahead of the market, this problem of costs is one which is receiving close attention.

Dividends

In regard to dividends, while the company is still pursuing a careful policy of building up strength for the future, we are pleased to be able to increase the ordinary dividend from 9% to 10% this year. Preference dividend, of course, is fixed at 6%. Dividend requirements on this basis are £54,716, as against £38,109 last year, on lower capital.

Balance Sheet

During the year, fixed assets increased by £85,095, of which £69,454 was for buildings and £15,641 for plant and equipment. In Melbourne, the new administrative building, the colour advisory centre and extensions to the emulsion paint factory and laboratory were completed. The main factory building in Sydney was completed, and the new warehouse for our Brisbane branch is nearly finished.

Stocks, valued on a conservative basis at £293,901, were £57,822 lower than for the previous year. Supplies of certain important raw materials are still difficult with the result that reserve stocks have become depleted. It is the policy of your Directors to restore those as the raw materials become available.

Share Issue expenses amounting to £7,055 were incurred during the year and these, added to previous figure, brought the total to £12,387. However, the Board has decided to write off this item as circumstances permit, and accordingly have written off £3,387 this year.

Our paid-up capital has increased by £150,000 through the new issue of preference shares early this year. Average capital used in the business increased from £430,098 last year to £596,801 this year.

Our bank overdraft has been reduced by £137,965. Although the replenishment of reserve stocks will alter this position, your Directors consider the company is in a sound financial position to cope with the existing plans for development.

The Unappropriated Profits Reserve has been increased to £122,499 by the transfer of £25,671 this year.

Trading Conditions

In regard to trading operations generally, one of the most interesting and important developments was the change in market conditions. For the first time since pre-war, the industry has been on a fully competitive basis and I think the fact we were able to establish another turnover record under these conditions, speaks for itself. This competition is a good thing for both the industry and the consumer. It not only requires the manufacturer to give better service to customers and to build new and better products, but also teaches the customer to be more discriminating as to quality and value. The fact that we have always concentrated on making only top quality products and backed them with ever-increasing services, is bringing its own reward. Two such services which have proved an outstanding success have been our Practical Painting Advisory Service and our Colour Advisory Service. Both are available to all types of customers and are very much in demand.

Distribution

During the year, many new accounts were opened and the distribution of our products in all States has been widened. In August this year, both Sydney and Brisbane branches commenced operations and are already off to a good start. We have also been doing some export trade in areas adjacent to Australia, although we have not made any serious effort to develop this, as yet.

Products

On the products side, to the well-known Permoglaze Interior Finishes and Tanox Exterior Paint groups, has now been added the long-awaited synthetic rubber emulsion paint—Spred Satin. Production commenced in August and the product was released in Victoria about the middle of September. It was an immediate success and present indications are that our resources will be taxed to the utmost to keep up with the demand.

Constant work is going on in our Technical Research and Development Laboratories, not only to keep existing products in line with latest technical developments, but to design new ones. Several new products are under consideration and it is hoped that one of these at least will be available in a few months' time.

Current Year

Sales for the first three months of this new financial year are ahead of sales for the corresponding period last year, and now with the introduction of Spred Satin, we are hoping to achieve another record in turnover this year.

At the Annual Meeting of the Company held on October 29, the Chairman, Mr. T. H. King, delivered the following address:

Balance Sheet Figures

The consolidated profit of Freighters Limited and its Subsidiary Companies amounted to £163,061 after providing £25,681 for depreciation of fixed assets, and before provision for taxation of £62,766.

The interim dividend of 7½% absorbed £37,500 and, if the directors' recommendation of a final dividend of 7½% on the paid-up capital of the company as at June 30, 1953 is adopted, and a transfer of £25,000 made to General Reserve, there will be a balance left in the Appropriation Account of £79,982.

I would draw your attention to our steadily increasing reserves now showing on the Balance Sheet at £157,000. This figure has since been increased by £50,000 to the Premium on Share Reserve Account by reason of the final call made on July 1 last, on the partly paid shares of the company. If the meeting agrees to our recommendation to transfer a further £25,000 to General Reserve, the total will then be £232,000. This does not take into account the balance in the Appropriation Account of £79,982. This position is brought about by your directors' policy of progressive consolidation.

General

This last period of trading has not been without its difficulties. Business generally found it had to cope with a reducing turnover and keener competition. Restrictions on the operation of road transport meant a diminishing market for this equipment, but, as I have explained in previous reports, our company is not dependent on the manufacture of semi-trailer equipment for road transport.

On July 1 last, the final call was made on the partly paid shares of the company. This new capital was issued for the purchase of new machinery and the erection of further buildings. You will notice that our overdraft position at the end of June this year shows a large increase on the previous year. This was brought about by the purchase of the aforementioned equipment during the year ended June 30, 1953, and such overdrafts have now been reduced accordingly with the receipt of the balance of capital which was really allotted for this purpose.

Through our manufacturing subsidiaries many new avenues of revenue have been tapped, these I will enumerate for you as I review each division separately.

One of our directors, Mr. F. M. Moore, recently visited South East Asia, India and Ceylon with a view to opening up an export market in the East. Valuable contacts have been made, and already we have received orders and despatched equipment to area.

McGrath Trailer Equipment Pty. Ltd.

At our last meeting I reported on the erection of the Tank factory at Moorabbin. This factory has more than pr its value, as the manufacture of tanks and other allied prod have been progressing steadily throughout the year, and I happy to inform you that production from this plant has been satisfactory.

On the second page of our Annual Report you will have a photograph of the new Gantry Building now nearing comple at our Moorabbin Division, this building will be able to ha heavy engineering work, structural steel and fabrication. C plete with a travelling overhead 10 ton electric crane the machi can be fully utilised for all heavy purpose cutting, pressing, rol etc. The steel press now operating is the largest of its kin Australia, and this, together with the rolling machine and guillotine, has fully equipped our heavy engineering section.

The modern and scientific trend towards lighter sections all types on construction is being borne out by the increasing of pressed steel sections as against the rolled steel. The af mentioned equipment will be used for this purpose and, in addit many more avenues of the engineering field can be exploited additional revenue.

During the year 1953 your manufacturing divisions in all St produced quite a number of orders for structural steel work. M types of building work have been fabricated and supplied much success, and the orders now in hand point to a rapid pansion in this field.

Bulk handling equipment and farm trailers have been in dema and in this type of unit we have been able to develop and ma facture for many varied requirements.

Freightmaster Refrigeration Pty. Ltd.

In my address to you at our last meeting I made mention an air-conditioning unit being developed from an idea obtai by our Managing Director, Mr. Noel H. Peel, during his visit the United States of America. This unit has been put into p duction, and many enquiries have already been received, but total output to date has been absorbed in Government orde However, we anticipate in the near future that we will be in position to distribute the "Conditionaire," as the unit is call on an open market.

Orders for refrigerated transport have been increasing steadily, s it has become very apparent to the food industry that the only ife way of transportation is by using refrigerated units.

The manufacturing division has been kept extremely busy over e last few months, and orders on hand are very satisfactory.

Freighter Trailers Pty. Ltd., Sydney

This subsidiary has also been engaged in the fabrication of ructural steel and bulk handling equipment and, at the moment, s many months production on hand. It has been found necessary increase the factory staff considerably to cope with the demands ade on this division.

Australian Machinery Company Pty. Ltd.

Our Brisbane manufacturing division had a very successful ar with gratifying results. The manufacture of trailers and allied uipment has been steady and this, together with general and ructural engineering work, has kept this company in full pro- ction. Steelwork for bridges and structural sections for factories d commercial buildings have been fabricated by the division and, om the present trend, this type of work will increase during the rrent year.

Freighter Trailers (Tas.) Pty. Ltd.

Business in Tasmania showed a slight decline during the period der review, but the first few months of the present financial year have resulted in a small but steady increase in production turnover, one which we expect to continue throughout this year.

Trailer Sales & Service Pty. Ltd.

Altogether the distributing and servicing companies throughout Australia had a satisfactory result for the year of trading. In line with all types of industry, competition for engineering and transport work has become keener, and the past year has proved that, to our organisation as a whole, our selling division must be an essential part of the structure. In addition to selling and customer promotion, these divisions of Freighters Limited supply spare parts, and service vehicles.

General

Summarising the position generally, your company has successfully passed through the first period of economic re-organization, and now has a solid group of subsidiaries completely capable of adapting themselves to any change or fluctuation in business conditions.

The volume of orders and enquiries now to hand are quite satisfactory, and once again we have every confidence in the current year.

On behalf of the Board of Directors I would express my appreciation for the work done during the year by the staff and employees of all our subsidiary companies.

Ensign Dry Cleaners Ltd.

g. Office: 24 Leinster Grove, Northcote, Vic. 'Phone: JW 6275.

At the Annual Meeting held on November 4, the Chairman, Mr. L. Hewison, addressed shareholders as follows:—

The principal items shown in the Accounts have already been erred to in your Directors' Report accompanying the Accounts. se showed an operating profit for the year of £7,539 from which, er providing £3,300 for taxation, your Directors recommend pay- nt of a dividend at the rate of 8%.

New Factory

During the year, the full transfer of the Company's operations the new factory at Northcote was completed. In view of this stantial irterruption to the Company's operations, it is con- ered that the profit for the year is very satisfactory. The efit of the facilities and efficiency offered by the new factory is being fully experienced. Sales are being maintained at a sfactory level and it is noteworthy that, notwithstanding the iculties experienced owing to the changeover, sales did not inish.

A further satisfactory feature is that whilst it naturally fol- ed that a substantial number of our trained personnel was lost a result of changing from a southern to a northern suburb, e have been replaced from the new district, and your Directors sider that should there be a repetition of the shortage of our that was experienced shortly after the war, the Company be in a much more favourable position in this locality to main- its strength in personnel. Not only is the locality considered uch greater advantage in this respect but the amenities which are now able to provide to personnel are also far in advance of those available at South Melbourne. It is considered that the working conditions in the factory and amenities will not only lead to greater output but will also be appreciated by all employees, shareholders, and those interested in the welfare of the worker.

The changeover from oil burning boiler to brown coal firing has resulted in a reduction in fuel costs and greater economies are expected when further automatic stoking plant has been installed.

Future

Competition in the industry is becoming keener, and action has been taken to expand the Company's services by increasing the sales force to maintain closer contact with customers and gain new business, and by establishing a special Service Department to ensure that service and quality are maintained at a high level. Constant efforts are being made to reduce costs by new and improved methods, and your Company is confident of the future.

The following figures are of interest in showing how the earnings of the Company are distributed. Of each £1 of income, employees receive 10/6¼; suppliers 7/7¾; taxation 6¾d.; shareholders 4½d.; and 10¾d. is retained by the business.

Staff

I would like again to express on your behalf and on behalf of your Board our most sincere appreciation of the loyalty and effort of the employees of the Company. The year was a particularly difficult one, owing to the changeover and if it had not been for the very excellent work and co-operation on the part of all, it would have been impossible to have achieved the result shown in the Accounts.

F. J. Walker Limited

Meat Exporters, etc.

Operating through the parent and nine subsidiaries, the organisation owns an old-established business engaged in the meat and allied industries, including cold storage activities, throughout N.S.W.

Meatworks of export standard are operated at Auburn and Aberdeen (N.S.W.); wool-scouring, fellmongering and tanning works are at Botany, and cold store at Pyrmont (Sydney) is one of the most modern in Australia. Eight rabbit chilling works are owned in country towns, while other sections manufacture smallgoods, casings, butter, ice and process poultry for local and export trade.

In his address to shareholders at the Annual Meeting held on October 29, the Chairman, Mr. D. G. Molesworth, said:

The aggregate net profit of the company and its subsidiaries for the twelve months was £318,565 (1952, £185,669), after providing £260,000 (£153,651) for income tax based on taxable income at 9/- in the £, being the rate for public companies at the date of completion of the accounts, and £32,786 (£28,234) for depreciation of fixed assets and amortisation of leasehold property.

The taxation provision as the result of Budget rate reduction is overprovided by £60,000.

Your Directors ask you to confirm the 5% interim ordinary tax-free dividend paid in April last, totalling £50,000, and now recommend payment of a final dividend of 5% plus a bonus of 2½% on the ordinary stock, out of the profits for year ended June 30, 1953.

Turnover and Markets

You will have noticed from the Directors' Report that the turnover exceeded £7,500,000 and that all of the nine subsidiary companies showed profits and are operating efficiently; and as the result of the bounteous pastoral conditions enjoyed, our volume of business increased sufficiently to offset the rise in costs resulting from quarterly basic wage adjustments.

For the first time in many years we were able to export a large tonnage of frozen beef to Great Britain, and also an increased volume of fat sheep and lambs treated at our two meatworks helped to supply our woolworks with additional skins to process.

Wool values were much more stable during the year, which assisted materially in producing the profit shown.

Our cold stores again handled a large volume of business throughout the year, and the new 7th floor mentioned in my last report has been completed and is being effectively used.

The works have been well maintained during the year and are constantly being improved to keep them at the highest point of efficiency.

Finance

At the last Annual Meeting I referred to the necessity to maintain a strong financial position in these uncertain days, and you will be pleased to notice that the current assets of the Group, at £895,032 exceed our current liabilities and provisions (including final dividend of £75,000) by £336,849, which is £157,044 better than last year.

The additions to fixed assets during the year were £81,471 (the main item being £48,421 for extensions to Waterside Cold Stores) and after providing depreciation written off of £32,786 and s of £14,420, there is a net addition of fixed assets of £34,265.

A higher dividend could have been paid but you are aware t the results are to some extent governed by pastoral conditions, your Directors consider that a steady, conservative dividend o a 5-year cycle would be more appreciated by the stockholders t variable dividends in accordance with fluctuating results.

In addition, a Company with ramifications such as ours ne funds for expansion and modernisation each year, and it is p ferable whilst practicable for such funds to be supplied from s plus profits than ask stockholders for new Capital from their fu on which they have paid taxation.

Stocks at £218,367 are £81,823 less than the previous year, mainly to lower values ruling for meats, and smaller quanti held as the result of the good pastoral season.

You are fortunate that the products handled by your comp are in everyday demand and readily saleable within a few days production, which enabled us to turn-over our stocks about 30 ti this year.

Trade debtors, etc., at £259,053 are £54,996 higher than l year, due chiefly to expansion of trade.

You will be interested to know that pay-roll tax and worke compensation insurance cost us £29,394 for the year, on wages p of £722,000.

The year's accounts bore an expense of £6,748 for Staff bene per medium of the Life Insurance and Workers' Shares schem and your Directors have decided, since balancing date, to m a further payment of £5,000 to the Trustees of the Workers' Sha scheme, to provide for further future expansion.

Oldham Bros. Limited, Newcastle

You will be glad to know that our offer of two 10/- stock un in F. J. Walker Limited for every five 5/- shares in Oldham Br Limited was accepted, and 151,608 10/- stock units with a face va of £75,804 will be issued in exchange for Oldham's total ordin shareholding in the business.

This step has been taken with the object of consolidating a expanding our business in the fast-growing Newcastle area, wh we have for many years operated through our subsidiary, T Australian Chilling and Freezing Company Limited.

Employees

It is fitting that tribute should be paid to the splendid eff of all the Company's employees, who maintained continuous ope

ions at all our Works throughout the year, and who have made ossible the satisfactory report presented to you today. The Direc- ors ask you to join with us in expressing appreciation of the ffort of all employees during the year.

Unfortunately our Auburn meatworks and the Cold Stores at yrmont were closed for three weeks in September, 1953, as the esult of a strike in sympathy with workers at Homebush Abattoir vho struck over a dispute regarding seniority in dismissals.

However, we were able to maintain operations at our Aberdeen neatworks and Botany Woolworks, with satisfactory results.

The Future

You will remember that in my last report I forecast that the businesses most likely to grow are those that are best equipped to meet the strain—and it is a great pleasure for us to be able to report record profits following years of preparation to perfect our processing facilities.

As we look ahead, the outlook is not quite as clear as last year because of the possibility of a change in the marketing system in the U.K. for our export meat; and the season although still a reasonable one, cannot be compared with the bounteous season enjoyed last year.

The Chairman, Mr. C. F. Longmore, addressed the Annual Meeting held on October 27, as follows:

It is again my privilege to present the Report and Balance Sheet the Company for the year ended June 30, 1953.

Reviewing the operations of your Company, it is with regret at I have to state it has not been by any means an easy period, d it is unfortunate that the industry during that time has been set with major problems, causing much anxiety and considerable prehension.

At the commencement of the period under review, our expecta- ns were encouraging—extensive new plant which had been in- alled was operating very satisfactorily, and sales were on a high vel and continued up to the end of December, 1952, but you will member in our interim report to shareholders in February, 1953, indicated that the position had changed and was then rather secure as the decline in sales was very pronounced, and it could t be foreseen how long this would continue.

Unfortunately, the loss on turnover both on export and domestic siness continued to a very marked degree until June of this ar, and then reached a low level and consequently trading was profitable.

Main Decline

The main decline was in canned packs comprising meat and getables and the like, and the market for similar products packed your Company became so highly competitive that sales could ly be effected at prices much below production costs, and these tors contributed very largely to having to adjust costs of pro- tion generally, which involved the loss your Company suffered m the year's operations.

Increased Sales

Since the close of the financial year, it is pleasing to report t sales have increased considerably, and the position today is ghter, but your Directors are still apprehensive of the future ess cost of production can be materially reduced.

The over-all effect on the industry today is that the costs of w materials, freight and general charges are far too high to be sound economically, and unless a very drastic change takes place the prospects are not regarded as encouraging.

With the advent of the canning season soon commencing it is anticipated that lower prices will be paid for some raw materials, e.g. fruit, tomatoes and vegetables, but with cans, bottles and sugar, although now freely obtainable, the present high costs will have a definite bearing on our ability to compete on export business.

Stocks

The stocks held by the Company are still relatively high, but the liquidation of lines in small demand is considered satisfactory although much slower in clearing than was anticipated.

Directors

During the year, Mr. Holman J. Dillon was invited to join the Board of Directors of the Company, and I extend to him a cordial welcome to this Meeting.

Staff Changes

During the year the Company has had several changes in its Executive Staff. This has necessitated some new appointments and the re-organisation has been a slow process, but your Directors feel that the elevating of existing personnel wherever possible to top Managerial positions will prove to be sound in principle.

Mr. J. W. Hartley who acted as Assistant Secretary to the Company for the past two years was appointed Secretary.

Dividend

The operations for the year involving a loss, your Directors decided not to declare any dividend on the ordinary shares, but the 6% preference dividend was to be paid out of accumulated reserves.

Staff

As your business is largely dependent on the ability and experience of our Staff, we are giving much attention to their development, and your Directors record their appreciation of their loyal and able work, particularly in the present year under review.

Gadsden-Hughes Ltd.

Reg. Office: 59-75 Queens Rd. Five Dock, N.S.W. **Directors:** W. G. Forsyth (Chairman), E. H. Dunnett (Manag. Director), S. W. Gadsden, N. C. Gadsden, R. E. Hughes, C. H. Clarkson, H. S. English. **Auditors:** Barraclough, Fitts & Co.

2nd Year ended June 30, 1953. Meeting October 30, 1953.

Although trading profit was £20,000 lower, a reduction of £42,000 in taxation provision resulted in a net profit £13,000 higher at £119,007, returning 10.8% on capital. Dividend was again 7%.

*Adjusted figure from memorandum of sale dated October, 1951.

†Tax paid.

‡In 1953, debited with £4,400 loss on sale of asset.

The company was registered in November, 1951, to acquire the long-established businesses of J. Gadsden Pty. Ltd., N.S.W., and Richard Hughes Pty. Ltd., both companies being engaged in the production of metal and tinplate containers of all descriptions.

Stocks were £313,788 lower and overdraft down by £213,627. Economies which continue to accrue from the amalgamation include the consolidation of production activities. One factory has been sold and another may be sold this year.

Net tangible asset backing (book values in consolida balance-sheet)—11/10 for each 10/- share.

At the Annual Meeting held on October 30, the Chairman, Mr. W. G. Forsyth, gave the following address to shareholders:

In the case of a company such as this, that is a holding company with two subsidiary companies and with a separate Balance Sheet and Profit and Loss Account for the holding company and a Consolidated Balance Sheet and Profit and Loss for all companies, the position becomes somewhat confusing to the ordinary layman. I think, however, if you would give your attention to the Consolidated Balance Sheet and to the Consolidated Statement of Profit and Loss on the last sheet of the Accounts, you will get a proper appreciation of the real position. In order that you may do this there are a few aspects to which I would like to call your attention.

At the time of the amalgamation of the two holding companies there were a small number, in fact 11,535, £1 7% preference shares in one of the subsidiaries which were not taken over at the time of the amalgamation. During the year just past an arrangement was come to between your company and the holders of those preference shares that each £1 preference share be exchanged for two 10/- ordinary shares in your company. The whole of the holders of the preference shares agreed to this course, and consequently in your Balance Sheet this year there appears the additional item of 23,070 ordinary shares of 10/- each which did not appear in the Balance Sheet for the previous year, but at the same time if you will look further down in such Consolidated Balance Sheet you will see that the item of outside minority interests which appeared in last year's Consolidated Balance Sheets is eliminated from this year's Balance Sheet. This will mean that in future the accounts of the company will be those of the holding company and its wholly owned subsidiaries without any outside minority interests.

Operations.

Dealing with the operations during the year, as I have pointed out on a previous occasion, the fact of amalgamation has enabled considerable economies to be effected, and, of course, the reduction in income tax rates for the year in question has also been a substantial help in providing the net profits as shown. As a result of the amalgamation and the consequent economies, certain properties became surplus, and one has been sold during the year and possibly another one may be sold during the current year, this, of course, without in any way detrimentally affecting the efficiency of the business as a whole.

Balance Sheet.

Dealing with the figures shown in the Balance Sheet, you will, I think, appreciate that the liquid position of the company has improved to a marked extent. Stock is down by about £314,000, and our liability to the bank is down by £216,000, while trade creditors are also down £159,000. Debtors are up somewhat, but this is due to certain accounts not being paid as promptly as we might have hoped. However, reasonable provision has been made in the counts for any doubtful debts. The item of freehold land buildings is down by reason of the sale of the property as viously mentioned, and substantial depreciation amounting £81,000 has been made with regard to plant and machinery. H ever, with the purchase of certain additional plant this asset sh a net reduction of about £50,000 during the year.

Looking then at the final figures showing the position a June 30 last, you will see that there is an amount to the cr of the various reserves and the Profit and Loss Appropriation count of just under £200,000 which, considering that this is the second Balance Sheet of the Company, reflects a very sa factory position, particularly as there are no intangible items cluded in the Balance Sheet.

Dealing with the future, your Directors feel that though company is affected to some extent by the present lower dem for some packs, general demand is on the whole firm. We therefore, confident that subject to any unexpected happeni your company will achieve a satisfactory result during the cur year, as it is felt that still further economies can be introdu From the point of view of industry generally, I would like to m a few remarks—not confined in their application to this comp although it forms not an inconsiderable element in the gen economy. It is a primary object, of course, to carry on busines a profit, but the vital question is what amount of such profit to be left after the demands of the taxing authorities have b met.

Tax Reduction.

For the year just ended, as I have previously mentioned, company had the benefit of the reduction in the rates of inc tax provided for in the recent Budget of the Federal Governm This relief was, of course, most welcome and will help not this company but industry generally to make provision for fur development and expansion upon safe lines. One recognises difficulties of the Federal Government in ensuring that suffic income is provided to cover the national expenditure, and no d such difficulties are the primary cause of further improvem not being made in the position of companies and taxpayers ge ally. I do not refer to these as concessions because there are tain improvements which can and should be made which to mind are not concessions but the right of companies and the dividual shareholders comprising those companies. Payroll tax of course, a burden for which there is no justification, except fact that it brings in substantial revenue. It is a tax imp irrespective of whether the company concerned is making s or large profits or whether in fact it is making profits at all is a burden placed upon progressive and expanding industry me by reason of the fact that it is paying wages and salaries to employees. Admittedly, certain amendments have been made regard to payroll tax, but although it is claimed that a l number of taxpayers are thereby benefited the main benefit is

xpayers in a small way of business, employing probably not more an 6 or 8 employees, while the reduction in the case of com-nies such as our company has a negligible effect on the year's sults.

In any event, any reduction in payroll tax does not mean a duction of that amount in the revenues of the Commonwealth the Commonwealth, of course, again gains by having an in-eased income of the company on which to levy income tax. How-er, I feel that the Federal Government should, as soon as pos-ble, introduce reductions in the payroll tax if necessarily in a ogressive manner until such tax has been wholly abolished, as should be.

The other matter of general interest on which no step has en taken by the Federal Government is the highly objectionable actice of taxing companies heavily and then taxing shareholders the fullest extent on any dividend they receive from their com-nies. The beneficial interest in the profits made by the company long to shareholders and beyond question the present system eans that such shareholders are in effect taxed twice, once when their company is separately assessed and in the second place when they are assessed on their dividends without any rebate being allowed. I cannot see that in principle there can be any answer to the contention that dividends should not be taxable in the hands of the shareholders, or at least shareholders should be allowed a rebate in their income tax to the extent of the rate paid by the company with a limit, of course, that it should be within the rate chargeable against the shareholder. This matter has been ventilated constantly of recent years, and it is one to which the attention of the Government should be directed necessarily as a matter of mere justice to taxpayers with a view to relieving the unfair penalty of taxation placed on shareholders in companies.

Staff.

I would, once again, like to stress the fact and this must be obvious to all that the results achieved by the company during the year in question could not have been obtained without the wholehearted co-operation of all those employed in the organisation, and our thanks are due to them for their unstinted efforts during the year.

George Wardrop Ltd.

Tailors, Mercers.

g. Office: 197 Elizabeth St., Melb. **'Phone:** MU 6088. **Directors:** F. J. Wardrop (Chairman and Manag. Director), R. D. Currie, Mrs. J. Besley, T. A. McLean, S. K. Menzies, W. T. Hopkins. **Auditors:** M. R. M. Smith; Peacock & Henshaw.

32nd Year ended June 30, 1953. Meeting October 30, 1953.

Profit improved after last year's recession and dividend was higher at 5%. Turnover recovered late in the financial ir and has since increased further.

n addressing shareholders at the Annual Meeting held on Oc-r 30, the Chairman, Mr. F. J. Wardrop, made the following arks:—

Before commenting on the year's result, it is fitting that I uld preface my address with a sincere expression of loyalty on lf of the Directors and the Staff to our young and gracious n, Elizabeth II. The pomp and fervour of the Coronation is over, but time will not erase the memory of our Queen's dedi-on of her life to the service of her subjects.

The Directors' Report and Balance Sheet are already in your ds and will, I assume, be taken as read.

Sales

s indicated in the Report, sales for the year under review slightly below the figures for 1952 which were at a record

may not be widely known that the volume of men's wear suffered a sharper reduction during the year than the sale erchandise generally. I quote as my authority a report issued the Commonwealth Bank in conjunction with the Master ers' Association which supplies the following figures for the n months ended June 30, 1953:—

eduction in turnover on general sales as against previous eleven months 2.2%

eduction in turnover on men's wear as against previous eleven months 9.5%

With this information to hand I can assure the shareholders the Company fully retained its share of the reduced turn-

Prospects

owards the end of the financial year considerable improvement tivity was noted and I am pleased to report that turnover for quarter ended September 30 was most satisfactory.

The prospects for the current year are very bright and we are confident, particularly when we consider the concessions outlined in the recent Federal Budget, that the year's trading will show a satisfactory result.

New Branches

After a period of consolidation, I am happy to announce that we have resumed our expansion policy.

Next month we will open two new stores in country districts—Red Cliffs and Hamilton.

We have been fortunate in acquiring the business previously carried on by Mr. A. H. McNabb at Redcliffs. This is a well established and profitable business which is bound to benefit the result of future trading.

At Hamilton we are obtaining possession of a new store which is now nearing completion and which is situated in the heart of the main shopping area.

Manufacturing

Experience has proved the value of being able to manufacture our own tailored and ready-for-service clothing. This has enabled us to maintain an exacting standard of quality and to create our own styles embodying the latest overseas trends.

The reception accorded our recent stylings in suits and sports wear has been most gratifying.

Thanks to Staff

In conclusion, I would like to express my thanks to all members of the staff for their unswerving loyalty and co-operation.

We have built up an enthusiastic team in which youth and experience are evenly blended and the possession of such a team is, I feel, the best guarantee for the future success of the Company.

Fowler Constructions Ltd.

Materials Handling, Transport and Road Construction Engineers.

Reg. Office: Lorimer St., Port Melb. **'Phone:** MJ 2031. **Directors:** F. J. Fox (Chairman and Manag. Director), G. Forrest Davies, G. M. Mogg, J. Dews. **Auditors:** Cook, Tomlins & Mirams.

6th Year ended June 30, 1953. Meeting November 10, 1953.

As predicted at the Annual Meeting in 1952, turnover was considerably below that of the previous year. Profit receded to £30,175, and the profits available for ordinary dividends were 3.1% of ordinary capital. Reduced dividend of 4% was paid, partly from accumulated profits.

The following comments were made by the Chairman, M J. Fox, when addressing the Annual Meeting of shareholder November 10:

We have just been through a most difficult year and this borne out my forecast of a year ago that it appeared unlikely Government departments would resume purchasing before the of June.

It could be that we have reason to congratulate ourselves emerging from the period with a "clear skin," for although a dend of four per cent. is quite meagre when compared with performance, the result may well have been a substantial for you will agree it is not easy to quickly adjust the tempo business when such a change in trading conditions occurs. particularly applies to the manufacturing side of our busi which compared with merchandising, calls for a much broade ganisation and far more comprehensive planning, also large mitments for raw materials to ensure that the manufacturing gramme keeps in step with the timetable, and a highly sk well paid staff which must be retained if the business is to vive. The manufacturing section of your Company met the po by launching into another field of manufacture, namely, the duction of equipment of a lighter type which has a broad m acceptance. This however, took time, but today these goods coming off our production lines in increasing quantities.

Improved Distribution

In the meantime, there are very definite signs of improve in our distributors businesses, for although Government re ments are still very much below par, private enterprise ha sumed buying of capital goods, still however in a somewhat criminating manner, but in sufficient volume to justify confi in the future.

Balance Sheet

Reference to the Balance Sheet provides grounds for grat tion, for, despite the reduction of £1,320,000 in sales, the surpl current assets over current liabilities has improved to £638,00 increase of 50 per cent. over that of the previous year. S and work-in-progress have been reduced by approximately £2 and bank overdraft by over £288,000.

It is unfortunate that in difficult periods it is the inva rule that shareholders suffer reduced dividends, for when sale substantially reduced, the net profit is more than proportio reduced. However, our carefully prepared budgets for the c year indicate an increase in turnover, with a subsequent imp ment in the profit earning rate.

New Subsidiary

During the year much has been done to consolidate our po two important contributions being the establishment of our sidiary Hydreco (Aust.) Pty. Ltd., and the sale of the Foun Hydreco, after incurring a small loss in its initial trading from January to June, is now operating profitably and wit market acceptance of its high quality products, should prove a profitable venture.

Foundry Facilities

The Company's need for a foundry is even greater today when it was at first envisaged, but unfortunately this was op at a loss up till March 31. In addition, as we did not attai objective of high quality castings, it was decided to join with Messrs. Heyes and Russell who were in the process of fo a company known as Automatic Castings Pty. Ltd. These gentlemen are very experienced in this work, the former foundryman and the latter as a well-known metallurgist. W our assets in our foundry for cash, and shares in Automatic ings Pty. Ltd., and with additional outside money being brou a very well equipped foundry is now in production. Your Co has a substantial shareholding in Automatic Castings and t your Directors, Mr. Dews and myself are shareholders and me of the Board of Directors. We feel that under this new ar ment, your Company's assets and interests have been pres Automatic Castings Pty. Ltd. report that they have satisf orders in hand and that indications for the future are dist encouraging and that a reasonable anticipation of profitab vestment may be expected.

Financial Structure

During the year desirable alterations have been made i financial structure. This was done to enable two of our subsidi I.S.A.S., Victoria and I.S.A.S., South Australia, to operate a tirely separate entities, each able to handle their own financ each controlled by its own Board of Directors. To accon this, our Directors, Messrs. Dews and Davies, voluntarily r

m the Victorian I.S.A.S. Board and Mr. J. S. Mehan, who has eady done invaluable work for this Company in South Australia, s accepted a seat on the Victorian Board.

Mr. Mehan is present today and I welcome the opportunity to roduce him to you. We are indeed fortunate to have the assist- ce of a man of the calibre and experience of Mr. Mehan.

New Products

There has been a marked improvement in the quality of our nes and shovels since we have installed Hydreco pumps and ves as standard equipment. This claim is supported by our tributors who assure us that these Fowler products are right the forefront as regards quality.

During the year we introduced to the market a tractor mounted vvy shovel designed for trench work and small excavations. This e of equipment is in big demand overseas and should, I feel, come very popular in Australia.

Our subsidiary companies are now the authorised distributors Lawton and Lawton-Towmotor Fork Lift Trucks. These mate- l handling aids are manufactured by J. A. Lawton and Sons nited of South Australia and are generally accepted to be equal quality to anything in the world. We are fortunate to enjoy exclusive marketing rights of merchandise of local manufacture ich, it is expected will become essential plant in the big majority Australian industries.

Also of interest to our shareholders, is the introduction of an ctric delivery vehicle. This was manufactured by Lawton and is by arrangement with your company and although only at prototype stage, the vehicle has been placed with a well-known dairy for test purposes. The performance data is such that we are encouraged to believe that there exists a considerable potential market for close range house to house deliveries. In this we are supported by the extensive use, in England, of similar vehicles for delivery of milk.

Future

As to the future, the trading since July has been reasonably profitable and although the demand for heavy equipment has not returned to its normal level, it is felt certain that the Government will unceasingly endeavour to continue the development of this great country of ours, the need for which is undoubted.

In the meantime, we are enjoying a volume of business sufficiently large to expect a higher margin of profit and a more attractive return upon your investment, in the future.

In conclusion, I wish to thank my co-directors in both Victoria and South Australia for their co-operation and assistance at all times. Also Mr. M. I. Tomlins, our Financial Consultant, who has given sterling service and the benefit of his vast experience.

Staff

I cannot adequately express my appreciation of the manner in which our Executives have applied themselves during this difficult period. They are worthy of the greatest praise and thanks of all the shareholders, for without regard to time, inconvenience, or domestic responsibilities, they have given unstinted service to your company and will, no doubt, make the greatest contribution to your success in the future.

To the staff and employees I also convey thanks for services rendered and wish them a lengthy and pleasant association with us.

The following address was given by the Chairman, Mr. H. W. Eckley to shareholders at the Annual Meeting held on October 19:

I have pleasure in presenting to you the Second Report of Lectors and the Profit and Loss Account of this Company for the r ended June 30, 1953, and Balance Sheet as at that date, to- her with the Consolidated Profit and Loss Account and Balance Set of the Company and its two operating subsidiaries, namely, G. H. Green and Sons Proprietary Limited, and H. A. McCandlish al Company Proprietary Limited.

The operating companies throughout the period under review, re been faced with further increasing costs in wages and in all rvices and supplies coupled with considerable disruption of busi- ss, consequent largely upon Government curtailment of develop- ntal activities and restrictions. The restrictive regulations now ng enforced on the transport industry make costs extremely ficult to control.

The net profit of the associated companies for the year, after f provision for income tax and adequate deduction for depreciа- n (an amount considerably in excess of the taxable allowance) is 04, to which is added profit on the sale of fixed assets £143, king a total of £3,347.

Upward Trend

This result must be viewed as very disappointing, but I am ased to say that during the last two months of the period under review and up to date in the current year, there has been a consistent upward trend. With the gradual easing of import restrictions and the general improvement in business, following the recently announced reductions in sales tax and income tax and other favourable features of the Commonwealth Budget, we believe we can view the future with greater confidence.

The Directors paid an interim dividend of 2½% (£3,250) in March, 1953, and now regret having to recommend to the stockholders that no further dividend be paid.

The new offices in Siddeley Street have been completed and have been occupied by the Company since December 1, 1952, and they undoubtedly add greatly to the facilities for the efficient and economic handling of our business.

During the year we sold to the tenant at a satisfactory figure, the portion of premises in South Melbourne occupied by it. Our liquid position has been improved in that the excess of our current assets over current liabilities this year is £24,225 against £14,327 in 1952.

The plant has been maintained in good order.

Staff

I am again able to acknowledge with pleasure the keen and effective service rendered by the executives and staff throughout the year.

The following address was given by the Chairman, Mr. G. F. Green, to shareholders at the Annual Meeting held on October 19:—

Your Directors have much pleasure in submitting to you the first Annual Report and Statement of Accounts.

Sales at £213,705 show an increase of 11.4% on last year's figures. This is considered quite satisfactory in view of the rather disturbed and uncertain conditions experienced throughout the year.

The normal steady rate of demand to which we were accustomed was replaced with violent fluctuations necessitating considerable overtime in certain departments and some slackness in others. This departure from the usual steady flow had an adverse effect on costs.

The net profit of £19,278 under the circumstances is considered satisfactory.

From this net profit, provision has been made for payment of tax of £7,300.

Leaving a balance of	£11,978
The amount brought forward at July 1, 1952, was	31,378
A total of	£43,356
Out of which your Directors have set aside to—	
Redemption of Redeemable Preference Shares	£22
General Reserve	35,000
Leaving an amount to be carried forward of	8,334

Your Directors decided to simplify the accounts and have reduced the many Reserves shown in the Prospectus by consolidating them into three accounts.

Capital Reserve (not available for dividends)—	
Amount as shown in Prospectus	£15,599
To which is added the Share Premium Reserve of	185
Making the total at June 30, 1953	£15,784
General Reserve—	
Balance as shown in Prospectus	£1,235
With which we have combined the Share Redemption Fund	22
Insurance Reserve	8,271
Stock Equalisation Account	6,419
And an Appropriation from the Profits and Loss Appropriation Account of	35,000
With the Adjustment of £2,815 for Tax this Reserve now stands at	
Tax Paid Reserve—	
Balance as shown in Prospectus	£
From this must be deducted the provision for the proposed dividend	
Leaving a balance of	£

Stocks on hand have been conservatively valued at cost placement, whichever was the lower.

Prospects

The current year opened up with a satisfactory volume of and your Directors, confident of the future prospects, have or another large press which will be running before Christmas. will enable your Company to keep pace with the steadily gro demand for high-grade printing.

Paper Supplies

Authoritative opinion in Great Britain suggest a probable in overseas prices. Due to increased demand the time for m and shipping of orders from Great Britain has increased from weeks to 4-5 months.

The positions of the Scandinavian mills shows a compa trend. Instead of the normal three months, which is gene accepted as a standard, time required for delivery is now months.

At the moment the position with Australian mills using pulp is delivery in from 5-6 months from date of order. using imported pulp they usually quote delivery three m from date of order.

The foregoing indicates a general recovery in world deman paper, with a consequent necessity to order well in advance.

Dividend

Your Directors recommend a Dividend of 4% (being at the of 8% per annum) on 180,000 Ordinary Shares of 10/- each t paid out of the Tax Paid Reserve Account.

Staff

I wish to extend, on behalf of your Board, our thanks appreciation to the staff for its willing and loyal co-operatio meeting emergency demands throughout the year.

The following report by the Chairman (Mr. R. W. Johns) was ulated to shareholders with the Annual Accounts:—

Following a period of indecision prevailing throughout the coun- last year, the trading of the subsidiary companies for the year ter review has been very satisfactory. Our engineering com-y, R. & M. Johns Bros. Pty. Ltd., has had a particularly good r to reach an all-time high in both turnover and profit, while manufacturing company, Johns Plastics Pty. Ltd., has made dy progress, more than holding last year's results. Both the npanies' products are in strong demand and the plants are now rating to capacity, so we can look with confidence to this twen-ih year since the inception of our business.

Selling Organisation

It was felt during this year that we had reached the stage in companies' progress when we should set up our own selling anisation, in order to more adequately service our customers' uirements. To this end, Mr. R. H. Whittorn has been appointed s manager, and Mr. E. R. Kinsman, who has been associated h the sales of the company for many years, manager of our ney office. The company has now been registered in New South tes, where we have been very fortunate in securing space as an -of-town office and store in Alexandria, an ideal situation for needs. The plan is taking shape very satisfactorily and should in full operation before the end of this year.

Plant

The keen demand for our hydraulic machinery of ever-increasing and capacity, up to our 60-oz. pre-plasticizing injection mould-machine—a machine of over 18 tons weight, with a value of 000-£18,000, and the largest of its type produced in the British monwealth—has dictated a policy of building up our plant new and larger machines to handle the flow of work. During year several large lathes and milling machines, together with smaller items, have been added to the plant to cope with demand for Johns equipment.

The production of our manufacturing company—Sturdee elec-al accessories—was somewhat restricted for the first nine ths of the year, due to the reduction in building activities and general conditions prevailing last year, but has done well, we to maintain last year's figures. The demand for these acces-ories has now taken a new turn so that we are hard-pressed to sfy our customers' requirements. Over the past year we have pped the new space, completed in June, 1952, with a number of labour-saving devices, automatic machines and belt assembly systems, all built by our engineering company, to bring the plant up to one of the most modern and efficient plants of its type in the country.

Staff

The company enjoys particularly good employer-employee relations, and I am sure the establishment has never run with more harmony and efficiency than that with which we have been operating this year. We have had a heavy programme of overtime in action in the engineering company during the latter six months of the year, which has made heavy demands on all concerned. The Board wishes to express its appreciation of the co-operation and excellent service rendered by the whole staff during this past year.

At the Annual Meeting on October 30 the Chairman made the following remarks:—

The consolidated turnover of the companies was increased during the year to June 30 by 21% on the previous year, while the profit before taxation has increased by 32%, showing an increase after tax (greatly assisted, of course, by the reduced taxation rates) of 62%.

The Current Year

The trading of our subsidiary companies, R. & M. Johns Bros. Pty. Ltd. and Johns Plastics Pty. Ltd., so far this year has been very satisfactory, so that we can look forward with considerable confidence to achieving another turnover record, in this, our twentieth year. Sales for the four months to date are more than those for the first six months' period of the year just closed.

In spite of the recent additions to our building the additional productive area is already overtaxed. The ever-increasing demand for the companies' products has placed a heavy load on our managerial staff, and it is only by added efficiency and mechanisation of our production lines have we been able to meet the requirements of our customers.

Prospects

I feel that the prospects of Australia were never better, following the recession period last year, which has given both employers and employees the shake-up that has been long needed to snap them out of the complacency into which the post-war boom years had led them. The upward trend of business, coupled with the new budget taxation reductions, have promoted a state of healthy prosperity in this, a young and progressive country.

The Herald & Weekly Times Ltd.

Newsprint was more freely available and consumption rose from 26,000 tons to 35,000 tons. The Tasmanian Newsprint Mill is now operating both its paper machines.

Record revenues were received by radio stations 3DB and 3LK, but the increase was largely absorbed by higher operating costs.

Apart from its two daily papers, the company owns a group of weekly and monthly publications, and the national weekly magazine, "Woman's Day and Home." A list of the publications and circulation figures are:—

Publication	Latest	Year ago	1939
"The Herald"—evening daily	420,800	417,522	225,402

"The Weekly Times"	98,952	89,795	33,211

The new Rotogravure Printery at Hawthorn is now partly operating and is expected to be in full production before the end of the next financial year.

After the close of the year, the company acquired sh in Queensland Newspapers Pty. Ltd., owned by the estat the late Sir Keith Murdoch.

Details of the new capital issue of £1,000,000 (inclu premium) are given in the Chairman's Address herewith.

The Chairman, Mr. H. D. Giddy, addressed the Annual Meeting, held on December 4, as follows:

The year's operations have followed the trend of industry in Australia. We have benefited from the buoyant revenues within our economy and we have been advantaged by the improvement in export prices from the other side of the world of our raw material.

The outstanding items are—primarily, a Revenue which is without precedent in this Company's history, £7,564,635 for the year. While Wages and Salaries and other costs have risen following the general pattern in Australia, the greater availability of newsprint has enabled us to produce figures which we all must regard as highly satisfactory.

Newsprint.

The difficult times in the early 1950's, when rationing was affecting our business, seem to have been overcome and an increase in the return to shareholders in dividends and reserve appropriations has been possible.

The restrictions in supplies of newsprint from sterling areas were removed as from April, 1953, and we were able to buy such supplies as were available.

Unfortunately, the dollar shortage still prevails, and we have to face severe controls on what we can import from Canada—a friendly source of supply of high-grade newsprint. We would be very glad to have more paper from that source.

The greater availability of newsprint has contributed largely to the success of the year.

We consumed 35,000 tons, the record up to date, and this is compared with a consumption of 26,000 in the year ended September 30, 1952. More newsprint enabled us to produce larger papers.

We increased our news cover and were able to make more space available to our advertisers, which facility was eagerly accepted.

Australian Newsprint Mills Ltd.

The interest of this Company in Australian Newsprint Limited has been frequently mentioned at these meetings.

That Company was a sheet anchor in the difficult days of war and when, later, it was decided to increase the mill's capa further capital was gathered in from the newspaper publis and in preference shares from the public.

I told you last year of the frustrations we had suffered in withholding of power by the Hydro-Electric Commission, and, much deliberation, the Directors of the Newsprint Mills de to have the contractual position determined by arbitration.

The Mill's point of view differed so diametrically from of the Hydro-Electric Commission that no other course se possible than to have the position resolved. The Arbitrator held the contention that Australian Newsprint Mills was ent to the supply of power for which it had contracted. Howeve Act of the Parliament of Tasmania passed in 1951 freed the Hy Electric Commission of all contractual responsibilities, and Newsprint Company was left without recourse. The availabili power in Tasmania is now increasing and Australian News Mills is being supplied with sufficient to run the two news machines, though the full contract requirements are not yet a able.

As a result, the production from Tasmania during the to end on June 30, 1954, should total 65,000 tons, compared 32,000 tons manufactured during the year ended June 30, 195

This increase, coupled with freedom from import restrict from non-dollar areas, and provided supplies from England Scandinavia are not themselves restricted by economic or o forces, should secure our newsprint supply and stock positio

New Zealand Newsprint.

It is proper here to mention that in New Zealand a news industry is being founded, based on the splendid exotic forest

at Dominion. The first stage of development envisages the production of 75,000 tons of newsprint, of which 25,000/30,000 tons ll probably be consumed in New Zealand. A block of perhaps 000/45,000 tons will be available for export, and negotiations are eady in progress for this tonnage to be available to the Australian publishers. After the experience of newsprint shortages in o world wars, with their inevitable aftermaths, the development another source of supply in the southern area of the world is great interest to the Australian publishers.

Balance Sheet.

The Directors have decided that from the profits accrued in s and earlier years, a transfer to the general reserve of the mpany is justified. This account has now been built up to a al of £600,000.

Additionally, we must contemplate some heavy rebuilding.

After lengthy negotiations, the vacant possession of Niven's ilding, in Flinders Street adjacent to the 3DB Studio, will be tained within a reasonable period, and that will enable a most essary rebuilding programme to be undertaken, particularly for r publishing activities. As a prelude to these plans, some buildgs alongside our main office must be demolished, and the Direcs have provided for the writing off of the capital cost of those ildings.

Similarly, the abnormal element of costs involved in erecting Hawthorn Printery in a period of acute shortages has been noved from the accounts.

When I addressed you last year I mentioned that the reward shareholders over many years had been scant. It is with much asure that we are able to add a bonus to the Ordinary shareders' return for the year just ended of 1½d. per 5/- share.

Circulation.

In this vital field, we are proud to record a year of distinct gress.

The Herald, for the last week of September, 1953, showed sales 429,945 copies, against 413,617 for the same week of 1952.

The paper has been materially enlarged in size, making more ce available for news content and for advertisers.

I will deal with the advertising position later in this speech, shareholders will be interested to note how the news contents e been enlarged:

In 1952 The Herald published 20,283 columns of news and editorial matter.
In 1953 the total rose to 27,548 columns.
In 1952 The Sun published 22,658 columns of news and editorial matter.
In 1953 the total was 27,405 columns.

All these figures are given on a comparable column size basis 22 inches.

The Sun has a steady circulation averaging more than 412,000 es daily, and in both reader interest and advertising value, is rpassed in the morning field.

The circulations of these two papers are still the highest by in their respective evening and morning fields of any papers Australia.

The Weekly Times has gone on to greater strength, and now a circulation of over 104,000 per issue.

The two Globes keep their high position in the sporting field.

Woman's Day sales have shown a marked improvement.

Advertising.

We continue our dominating position in the newspaper advertng field.

In the year we are dealing with The Herald and Sun between m published just short of 1,000,000 inches of display advertisin

The significance of this figure is evident when it is realised t the total of display advertising in all four Melbourne dailies ched a little over 1,320,000 inches.

This strong position is, of course, a reflex of our circulation res, and the cost of advertising in The Herald or Sun is still ongst the lowest in Australia, when taken in relation to circlation.

Our rates have remained unchanged for over two and a half rs. despite the rising circulations of both papers.

The Weekly Times advertising spaces are eagerly sought after those firms and companies interested in the countryman and needs.

Radio.

Radio Stations 3DB and 3LK continue to maintain their lead a highly competitive field, and frequent surveys have shown h the programmes are highly popular.

Some necessary plant changes have been authorised in Station L, involving the installation of a new transmitter and modern pment, early in the New Year.

An increase in the wattage allotted for 3DB's transmission will ranted by the Board of Control—from 600 watts to 5,000 watts.

To enable the use of this additional power with greater ser- to our listeners over a wider area, an expenditure of some 000 will be involved.

The overall volume of advertising over 3DB was greater in /1953 than in any past year, but in common with all other nesses, increased costs of operation have absorbed a good deal he better revenue collected.

Book Publishing.

Colorgravure Publications—our book publishing division—has n continued development. Amongst a number of notable proions for the year was "Queen Elizabeth's Coronation Book." Practical Australian Motorist" also had a fine public recepn creating new publishing and sales records,

A new enterprise which has been developed during the year is The Herald-Sun Readers' Book Club. This activity, which will be on a Commonwealth-wide basis, brings to the Australian public for the first time benefits hitherto virtually restricted to readers of books in Great Britain and the United States. Best selling novels by world-famous authors, factual books on travel and adventure, outstanding biographies and works of contemporary history are available to members in quality editions at economical prices. The Club shows good promise.

Many new works of educational and general nature are in course of editorial production.

Production.

As is to be expected with such large circulations, a great strain is thrown on the departments concerned with the printing of our papers.

Our plant is in first-class condition, and during the year we have installed additionally a new six-unit Goss Headliner Press with two double folders and fitted with a colour deck.

Steady progress is being made with new techniques, to meet the ever-increasing demands of modern newspaper production, and to assist us further in this respect we have at present two of our senior technicians in America, concentrating on colour printing.

Hawthorn Printery.

We are now in occupation of the Hawthorn building, and work is proceeding there.

We expect delivery of the modern Goss Gravure plant during 1954, and it should be running towards the end of that year.

In addition to taking over the work now being carried out in our Dorcas Street plant, the Directors are confident that much commercial printing will be available, and that the Hawthorn Printery will become a most valuable adjunct to The Herald Company activities.

Queensland Newspapers Pty. Ltd.

Shareholders will have observed in Press statements that the Company has purchased from the Estate of the late Sir Keith Murdoch and his family trusts and company an operating control of Queensland Newspapers Pty. Ltd., which publishes the Courier Mail and the Sunday Mail in Brisbane.

The Herald Company had acquired from Sir Keith Murdoch during his lifetime options to purchase the shares in Queensland Newspapers, if the executors desired to sell. This position arose and the Directors decided that the opportunity to acquire an interest in this developing property should not be missed.

The Courier Mail and The Sunday Mail are two of Australia's leading newspapers which are regarded very highly in this great northern State. They will continue to be conducted under wide local autonomy so their attention to Queensland interests will be maintained. At the same time, the Directors see substantial benefits that can accrue to both companies by this closer association of interests.

The Directors are confident that a profitable and powerful unit has been added to the Company's organisation.

New Capital Issue

In a Company such as ours, development must continue, and the time arises when the capital previously invested is not sufficient to cover the needs of investment in fixed assets, and in fact, with the higher values of today, in liquids such as stocks and book debts.

We have built a splendid factory at Hawthorn and have now acquired the Queensland assets.

We must contemplate a material rebuilding in Flinders Street, and as these assets are permanent, they should be financed by permanent capital. The Directors have therefore decided that an issue of additional capital is desirable, and at the conclusion of this meeting the Ordinary Shareholders will be asked to attend an Extraordinary General Meeting to increase the Authorised Capital of the Company—out of which the Directors have decided to issue 2,000,000 Ordinary Shares of 5/- at a premium of 5/- per share.

The issue, and the price at which the issue will be made, have been carefully considered by the Board, and the adoption of the proposals is recommended as being in the best interests of the Company and its shareholders.

Extension of the group's activities included improvements to storage and handling depots and terminals in Sydney, Adelaide, Hobart and many country centres. The company's own administrative building in Sydney has been occupied and an eight-storey building in Melbourne is planned.

An issue of 412,000 ordinary shares of £1 each at par to shareholders has been made since balance date to finance proposed extensions.

During the year the new tanker "Harold Sleigh", which cost more than £750,000, commenced service, and despite reduced shipping and freight rates, is expected to prove profitable.

At the Annual Meeting of the Company held on October 30, the Chairman, Mr. H. M. Sleigh, delivered the following address:—

On behalf of the Board of Directors, it is my pleasure to submit to you certain comments upon the finances and activities of the Company.

The accounts are presented in two sections. The first shows the position of the Parent Company, H. C. Sleigh Limited, disclosing in the Balance Sheet shareholdings in subsidiary companies owned and controlled by it and revealing in the Profit and Loss account the results of trading and income from investments by the Parent Company.

The second section embodies consolidated accounts which show the position precisely as though all subsidiaries as legal entities were absorbed in the Parent Company's direct activities. The Balance Sheet shows assets and liabilities of subsidiaries grouped with those of the Parent Company under appropriate headings and the Consolidated Profit and Loss account shows combined profits of the Parent Company and of its subsidiaries.

Result of Trading

Parent Company.—The Directors' Report and the statement of accounts shows a profit of £278,559 on trading operations, after providing £195,989 for depreciation and amortisation. Comparative figures for the previous year ended June 30, 1952, showed a profit of £250,425 after providing £123,370 for depreciation and amortisation.

Certain plant purchased by the Company many years ago and no longer required, was realised at a profit of £55,010, which is shown as a separate item in the Profit and Loss account. After bringing in income of £2,201 received during the year from investments, and including an amount of £915 previously provided for losses by subsidiary companies but not now required, the total income of the Parent Company was £336,685. Provision for income tax based upon rates now applicable absorbs £120,000, leaving a net profit of £216,685 after providing for tax.

Subject to the approval of shareholders at this meeting, it is proposed to pay a dividend of 8% per annum and also a bonus of 2% on the ordinary shares, all of which are fully paid. The payment of this dividend and bonus will absorb £104,800, the pr ence dividend of 5% £30,000, and it is proposed to place £ to the Staff Contingency Reserve and £50,000 to the General serve. The balance, namely £26,885, will be added to the appropriated profits which will then stand at £96,499.

Consolidated Accounts.—The combined trading profit of Parent Company and subsidiaries totals £331,954, after provi £213,608 for depreciation and amortisation. Income from in ments and profit on the sale of surplus plant remains as spec for the Parent Company. The total net profit, after tax provi of £143,800 is therefore £245,365, from which have been wri off preliminary expenses of £6,110 incurred in connection with of the subsidiary companies, thus leaving an amount of £239 Several of the subsidiary companies have small shareholders o than that of the Parent Company and a sum of £289 has deducted representing their interests in the profits of the subsid companies. The allocation for reserves and the provision for dends, remain in accordance with the Parent Company's figu but the carry forward of unappropriated profits amounts to £49 to give a total of £118,780 in this account.

Balance Sheet Movements

As the comparative figures for the previous year are show the left-hand margin in the Balance Sheet, I do not propose t more than draw attention to one or two points of interest. will be noted that the reduction in the value of stocks and deb is reflected by a corresponding reduction in the bank overdraft creditors. The item "Guarantees" shown under the heading "Contingent Liabilities" primarily represents guarantees by Parent Company as to fulfilment of obligation by subsidiaries u mortgage loans, which are shown in the Consolidated Bal Sheet.

Petroleum Division

Progress.—Early in August last we sent to all shareholde "Report on Progress" of our Petroleum Division. This broc gave, mostly in pictorial form, a clear picture of the progress m and new activities embarked upon during the past year.

New Tanker.—The Company's new tanker, "Harold Slei named after the founder of the business (founded in 1895),

livered by the builders on December 29. On her maiden yage the vessel carried a full cargo of petroleum from the West ies to Great Britain, after which she was inspected by the ilders and adjustments made. On her second voyage, the "Harold eigh" carried a further full cargo from the West Indies to South d East Africa which placed her in close proximity to the Persian lf for entering her designed trade route to Australia.

To date the performance of the vessel has been fully in accord th anticipations, and she has proved economical in operation.

World tanker freight rates have during the past six months, own a marked downward trend and have now reached the lowest el since 1947. Notwithstanding this, we are confident that our nker will show a satisfactory return on capital invested.

Marketing and Operations.—In my report last year I referred the new phase of retail distribution of motor spirit and lubri- ing oils, termed "the one brand Service Station" policy. To nter this move, your Company combined with others to form "Independent" group which offered through "Independent" tions a choice of brands. The success of our marketing policy n be gauged by the fact that our sales during the past year ve shown a material increase both in actual sales figures and in share of the total market enjoyed by the Company. Annual es of "Golden Fleece" petroleum products now considerably eed 40,000,000 gallons and our turnover of fuels and lubricants me has reached a figure of over £8,000,000.

Considerable improvement has been effected in the storage and ndling of our products and special mention should be made these features.

Our new Matraville Terminal, which becomes the main storage d distribution centre for Sydney and central and southern New uth Wales, is now in operation, although still incomplete. The pital outlay has been heavy, but considerable savings will be ected in general operations.

At Sydney also, we completed during the year the new bulk ricating oil terminal which is situated at Balls Head on Sydney rbour, and which has a capacity in excess of 1,000,000 gallons.

In Hobart work is now in progress in the new marine bulk rage terminal, and in Adelaide, bulk lubricating oil tanks of ge dimensions are also in the course of construction.

Many other facilities such as new country distributing depots, ve been erected and will no doubt prove of considerable benefit the Company.

During the year, many difficulties were caused because the price ntrol authorities would not grant adequate margins to cover increased costs. However, because of certain increases granted September and November of last year, the profit position greatly proved, with the result that in the final analysis a measure of fit was shown.

The recently announced reductions in the prices of petroleum oducts have been based upon the lower tanker freight rates to hich reference was made earlier.

Shipping Division

Owing to import restrictions the volume of traffic handled by this Department has been reduced and as a result, the income from normal shipping activities was on a lower plane than that of last year. However, substantial profits were made from the chartering of vessels.

Export Division

Once again, the Company's volume of exports showed an increase and although this business is more competitive and finer margins must be accepted, the profit from these activities was quite satisfactory.

General

To cope with the enormously expanded volume of work entailed by the expansion in the business, additional office accommodation has had to be provided. In Sydney the Company some years ago purchased a building at 115 York Street, and obtained possession in the latter part of 1952. This building has now been modernised and is not only most attractive, but has given the necessary accommodation to care for all operations.

In Melbourne, a new eight-storey Head Office building has been designed for erection on a site owned by the Company in Queen Street, and it is hoped to commence construction early next year. The necessary financial arrangements have been made.

Summing up the activities for the year, I consider that tremendous progress has been made, the business has been consolidated and, above all, the profit derived was satisfactory.

New Issue of Shares

Reference has already been made to the enormously expanded volume of business being conducted by the Company, and to cope with this additional facilities in the nature of pumps, tanks, country depots, rail cars and transport must be provided. To enable operations to be conducted on the most economical basis, it is most essential to complete some of the projects now in hand.

In order to finance this programme, the Board has decided to issue a further 412,000 ordinary shares of £1 each and is offering these shares to both ordinary and preference shareholders at par in the ratio of one new share for every four shares held as at November 10, 1953. A circular drawing attention to this issue was forwarded to shareholders on October 22, 1953. The Directors are confident that the earning capacity of the business will be improved materially upon the completion of the programme envisaged.

The death of Sir G. Dalziel Kelly has caused me very much sorrow, and I can assure you his wise counsel will be sorely missed.

Once again I would like to record my very great appreciation of the efforts of all employees of the Company who have shown extraordinary enthusiasm in carrying out their respective duties, and I feel we are particularly fortunate in this regard.

Where to, in 1954?

What's ahead of Australian business?

Prosperity or recession?

The challenge of lower overseas costs is a strong one. If we produce more, can we sell more?

How easy to let pessimism reign. Then what? Only fear, indecision, losses and failure.

Let's believe there's only one future ahead of Australian business—more business!

1954 can be a year of prosperity. It can be a year of bigger-than-ever business. And greater sales will bring costs down fast.

For more business, use advertising—the greatest force ever developed for creating mass demand.

It still "Pays to Advertise."

*In 1952, credited with £21,010 profit on sale of fixed assets; and debited with loss on sale of assets (1953, £3,657; 1951, £1,342).

By June, 1955, it is expected that main activities will be transferred from South Melbourne to a new factory under construction at Port Melbourne. To assist this programme a debenture issue of £1 million at 5% has been raised since balance date. In addition to the two main processing factories operated in Melbourne, there are five other factories in Victoria, one each in New South Wales and South Australia, and four in Queensland.

In addition to "Kraft Cheese" and associated lines, manufacture includes "Bonox" and "Vegemite" and an assortment of canned meat and fish products. A sound export trade for the company's products has been maintained.

Ordinary shares are held mainly by Kraft Foods Company, U.S.A., and Kraft Cheese Co. Ltd. of England. Valuable technical information results from these affiliations.

The following comments were made by the Chairman, Mr. H. G. Osborne, at the Annual Meeting on November 20:

The aggregate net profit of the company and its subsidiary—Kraft Foods Limited—for the 12 months under review was £451,646 (1952, £379,995) after providing £413,025 for income tax based on taxable income of 9/- in the £, being the company rate of tax ruling prior to the Federal Government's September, 1953, Budget, at which stage our accounts were compiled. However, as you are aware, the Budget disclosed a reduction in the company rate of tax for the year under review, resulting in an over-provision of tax to the extent of approximately £90,000.

Your Directors feel it essential, for reasons adverted to by me in my address last year, to continue the policy of strengthening the financial structure of the company, and accordingly they recommend a dividend on the ordinary shares at the same rate as last year, viz., 5%.

Trading.

Your Directors are confident that shareholders will be well satisfied with the results of the year's trading operations. Your company derives all its income from interest on moneys loaned to and dividends received from its subsidiary company, so that my further remarks will, in the main, refer more particularly to the operations of that company. As I indicated to you in my previous address, it then looked probable that the company was facing a year which would be full of difficulties so far as trading operations were concerned, since it faced the prospect of a "buyers' resistance" market. This proved to be the case, particularly so far as processed cheese sales in Australia were concerned. The increased price which your company had to pay for butterfat—which, of course, ultimately determines the prices to be paid for butter and cheese (being allied products)—had again considerably increased, and was, in my opinion, responsible for the slight decrease in processed cheese turnover. Conversely, volume sales of the company's proprietary line "Vegemite" considerably increased. The most satisfactory feature of the year's trading was the increase in sales and profits realised on the overseas markets. Close attention must, however, be paid to reducing costs of dairy products for export to meet increasing competition from Denmark and Holland, which countries are apparently producing butterfat at a lower cost than we here in Australia.

Total sales increased by approximately £600,000, and I venture to suggest that that was no mean accomplishment when considered in relation to the economic conditions which prevailed throughou the major portion of the year. The company's merchandisin methods have been under constant review throughout the year, an I am of the opinion that considerable improvement has bee effected, and will continue to be effected, to meet the ever-changin conditions of retailing in Australia. We have established a muc closer contact with our clients in all States, and have opened Branch Office at Perth, West Australia.

Finances.

I am pleased to report that the liquid position of your com pany is much more satisfactory than it was 12 months ago, brough about by the utilisation of retained profits and a substantial de crease in accounts receivable outstanding for collection, making a increase in available funds of approximately £650,000. The majo portion of these funds was utilised as follows:

To decrease Current and Deferred Liabilities	£256,96
To increase Inventories and Investments	46,93
To increase Fixed Assets, i.e., Property, Plant and Equipment, after allowing for the current year's depreciation	233,61
Making a total of	537,51
Thus leaving available in Surplus Cash Funds	105,67

Perhaps I should briefly refer to one or two of these items As you will probably recollect, I mentioned in my last address tha it was probable the value of inventories would reach a highe figure than that recorded on June 30, 1952. I am glad to say tha the increase was only £46,921. During the year our investment i inventories has been very carefully controlled in order to achiev this result. Likewise, in the case of our accounts receivable, b introducing improved collection methods a reduction of £284,328 wa achieved. No doubt this was due to some extent also to the lessen ing of the financial stringency which characterised the previou year and the early part of this year.

Fixed assets in the form of property, plant and equipment after allowing for the current year's depreciation, increased b £233,617. This reflects the continued cost of extensions and im provements made to our various plants throughout Australia. I my previous address I mentioned to you that your company ha made an application to the Capital Issues Board for approval t

row £200,000 from the Australasian Temperence & General Mutual e Assurance Society Limited, and also raise the sum of £300,000 the issue of Notes to the public and that after prolonged in- tigation by the Board approval had been secured, but at a time en facilities for raising additional capital had not only been atly reduced, but the cost involved substantially increased. I ther stated that your Board had decided to defer the question of proposed borrowing until such time as a complete examination the financial position and the quantum of funds necessary for completion of its plans had been made. That examination was y made, and it was eventually decided that the company should leavour to raise £1,000,000 by an issue of Debenture Stock, and lowing negotiations with Ian Potter & Company, that firm agreed underwrite the issue. This Debenture Stock is now being offered the public as well as to all of our shareholders. The whole of s money, apart from the amount required for preliminary ex- nses of the issue, is to be expended on the erection of buildings, tension and improvement of buildings and additions to plant, chinery and equipment required for the expansion of your com- ny's current business, and to enable it to develop other food ducts. The building plans, except for a few minor alterations, completed, and I am hopeful that by June, 1955, the company ll have transferred its main operations from its present factory Riverside Avenue to the site situated at Salmon Street, Port lbourne, over which it holds a long-term lease from the Lands partment of Victoria. This modern factory will provide facili- s for the production of further new products for addition to the mpany's range.

Board of Directors.

I regret to inform you that owing to continued ill-health Mr. H. Mason signified his intention to retire as Chairman of Direc- s as from September 30, 1953. My fellow Directors and I wish place on record our sincere appreciation of the long and valued vice Mr. Mason has rendered our organisation during his long m of association with it. We trust that his health will improve fficiently to enable him to enjoy a well earned period of retire- nt.

At a Directors' meeting held recently I was appointed Chair- n in succession to Mr. Mason.

During the year Mr. John H. Kraft transferred his attention other activities of our Associate Company—Kraft Foods Company, Chicago, U.S.A.—and as a consequence resigned as a Director of this company. Mr. John Clyde Loftis, Executive Vice-President of the American Company, was appointed in his place. Mr. A. R. Caughey, who until recently was acting as Alternate for Mr. C. H. Mason, will continue to act in the capacity of Alternate Director for Mr.. Loftis.

Your subsidiary company—Kraft Foods Limited—has, in addition to making alterations similar to those of the company, appointed Messrs. J. E. Sexty and E. O. Pelling, two of its senior executive officers, as Directors of that company.

Overseas Affiliations.

Your Company is indeed fortunate in having as its associate company Kraft Foods Company of the U.S.A., with whom I might say it works in the closest contact. We recently have had the pleasure and benefit of a visit from Mr. Loftis, and our Director, Mr. W. O. Beers, who is also General Manager, Overseas Operations, of Kraft Foods Company, Chicago. These gentlemen made a comprehensive inspection of operations in Australia, and it was of great advantage to us to have them here for personal discussion on company affairs generally.

Mr. J. E. Sexty, Sales Director of your subsidiary, Kraft Foods Limited, is at present visiting the United States where he is making a detailed study of current merchandising methods in that country.

Mr. D. R. Lambert, Chief Engineer of our company, is leaving tomorrow for the United States to study trends in development of food packaging equipment, with a view to installing the latest equipment in our factory at Port Melbourne. In my opinion great benefit results from these periodical visits by our senior officers to the United States.

Employees.

It is altogether fitting that I should pay tribute to the wonderful effort of all your company's employees, who have maintained continuous operations at all our plants and who thereby have made this satisfactory report which I am presenting to you today possible.

Future.

The company's sales and profits to the end of October show some improvement on the previous year, and I am hoping that this is a good augury for the remainder of the year.

H. M. Leggo & Co. Limited

Manufacturers of Food Products.

g. Office: Victoria Crescent, Abbotsford, Vic. **'Phone:** JA 3194.

Now in its thirty-sixth year as a public company, the ganisation specialises in the manufacture of tomato products l jams.

Directors report that the loss was mainly attributed to (a) ost complete collapse of the export trade for certain manu- tures; (b) consequent keen competition and price cutting in local market; (c) losses in connection with an Export Fruit ntract; and (d) generally to high cost of raw materials and duction.

Reorganisation proposals are outlined in the Chairman's dress herewith.

In his address to shareholders at the Annual Meeting, the irman, Mr. J. M. Macfarlane, said:—

At the close of the financial year, your Directors considered it isable to have the Company's freehold property re-valued by a petent sworn valuer, with the result that it now stands in the ks at £70,000, and a re-valuation of Fixed Assets Reserve of 462 has been created.

In view of the heavy losses, a general reserve which stood at 000 has been transferred to Profit and Loss Appropriation ount.

Before moving the reception and adoption of the Directors' Report and Balance Sheet, I desire to make a few remarks regarding the events leading up to the beginning of the year under review.

Reorganisation Plan

Following a somewhat gloomy report furnished to the Board by the former Managing Director in October, 1950, your Directors decided to call in a well-known firm of Expert Business Consultants, to advise as to what might be done to place the Company

(Continued on next page)

H. M. LEGGO & CO. LTD. (Contd.)—

in a better position to meet the keener competition, which it was then evident would have to be met in the future. The experts referred to, Ibcon Ltd., furnished two reports, one dealing with factory re-organisation, and the other with administrative control. Shortly put (because the reports were very voluminous and thorough), they meant eventual complete re-arrangment of the factory lay-out and drastic changes in the Management and personnel, extending even to the Board of Directors. This was a long-term plan, and was expected to take about three years to implement. After very careful consideration, the Board decided to adopt the plan, and to proceed with it gradually.

There were no "follow-on" men for the positions of Managing Director, Factory Manager or Secretary, but after considerable deliberation and what may be referred to as "trial and error," Mr. R. F. Preston was selected as General Manager, and Mr. J. Chippindall as Factory Manager. Mr. Alf. Harris continued as Secretary until quite recently, when he tendered his resignation, and, as you are all aware, Mr. F. H. Skues withdrew from the business and from the Board, as arranged in October of last year. I was appointed to succeed him as Chairman. Mr. Preston subsequently was appointed a Director and the Board was further strengthened by the addition of Mr. J. W. Condon also in October, 1952.

I have very briefly summarised those happenings, so that shareholders may have a better realisation of the difficulties encountered later in the year, to which I shall refer immediately and which your Directors deeply regret have resulted in the heavy losses recorded in the accounts now presented.

It soon became quite obvious that the Ibcon scheme could not be carried out in its entirety, excepting as was originally intended, i.e. as a long-term operation. There were various reasons for this. Firstly, the estimated expenditure was more than could be faced immediately. Secondly, the new factory management was not in complete accord with the suggested arrangement of the Plant; and thirdly, and most important of all, the condition of some of the existing Plant was so bad that immediate improvisation was necessary to enable manufacturing operations to be carried on at all. This can be proved, not only from the report of the former Managing Director, but also from the report of Ibcon Ltd., which asserted that the useful life of some of the premises and most of the plant must be almost at an end.

In view of these facts, very considerable expenditure was necessary to put the buildings and plant in a position to produce a reasonable output of our commodities.

Reasons for Trading Losses

The Directors have epitomised in their Report, the main reasons for the serious losses that have been incurred during the past year, and I may be permitted to enlarge on these, which I now do seriatim as they appear in the report:—

(a) "Almost complete collapse of the export trade for certain of our manufactures."

It is common knowledge that the export trade in jams to Great Britain has practically ceased, because of the high cost of the Australian product as compared with that manufactured in South Africa, where sugar is less than one-half the price we pay in Australia, labour is much cheaper, and transport charges are lower. In short, we have costed ourselves out of the British market. The fact that probably 50% of our jam production usually found its way to Great Britain will indicate the seriousness of the situation.

(b) "Consequent keen competition and cutting of prices in the local market."

It will not be difficult for shareholders to realise that with a practically closed export market for jam, heavy stocks held by us and by every other manufacturer, a much greater number of manufacturers operating than a few years ago, and, strangely enough, the home consumption in Australia having dropped from 14 lbs. per head in 1938 to about 7½ lbs. per head in 1952, there was a rush to dispose of surplus holdings, resulting inevitably in serious price cutting.

Up to the beginning of 1952, it was a "seller's market"; from then until June, 1953, competition was so keen in Australia that retail prices of well advertised brands of canned and bottled goods were actually lower than the wholesale prices fixed and determined by the Prices Commissioner.

Quite frankly, we were often compelled to sell at prices below cost. It would have been quite futile to hold on when every other supplier was quitting.

(c) "Losses in connection with an Export Fruit Contract, due to excessive heat and shortage of cold storage facilities at time of processing, plant break-downs," etc.

Early in the year we entered into a contract with a British firm for the supply of a large quantity of peach pulp at a price which was estimated to yield a substantial net profit. Unfortunately, this was not realised, but a heavy loss was sustained. I cannot do better than quote from our Factory Manager's Report on this subject:

"Peach Deal: In connection with the disastrous operations on peaches, the basic cause of the high costs was the inability of the factory to handle the tonnage of fruit during the critical part of the season.

"On three occasions, it was necessary to cease operations due to water failure, and five times due to failure of the sewerage system.

"On each occasion it was necessary for the main sewer to be excavated to effect repairs, with the result that great loss of fresh fruit took place.

"It was necessary to completely replace the main water service to the factory. Sections of the main show that the mains in places had an aperture of less than the diameter of a pencil through which we were endeavouring to draw 100,000 gallons per day—a physical impossibility.

"These factors were not fully apparent until the summer months when normal main pressure dropped to an extremely low level and the poor retriculation system failed under these conditions.

"These two failures were accentuated by the overlapping of the pear and peach seasons, which occurred for the first time for many years, with the result that dislocation of cool storage facilities took place. During normal seasons, we could divert fruit from our factory at almost immediate notice to suit our requirements. Unfortunately, last year cool stores wanted twelve to fourteen hours' notice before accepting or withdrawing fruit. The result was that fruit had to be left standing on the factory floor due to the inability of controlling cool storage intake.

"In addition, we experienced the record-breaking spell of 95 over several consecutive week-ends which made it impossible to keep fruit for even a normal period, without heavy losses.

"The damage to the fruit under these conditions had a very marked effect on the mechanical performance of the machine used, and had a very great bearing on reducing our output seriously."

Obviously, a contributing factor was the inefficiency of our plant and equipment.

(d) "Generally to high costs of raw materials and of production."

It seems almost unnecessary to refer to the high costs of raw materials and of production. As already stated, we are pricing ourselves out of the export market for processed primary products such as jams. What the remedy is, I do not know, but these markets are rapidly disappearing, and may never be recovered.

We must look for new lines of manufacture which lie within the compass of our plant and facilities. Our General Manager has furnished a report on this subject, from which I quote:

"In the last eighteen months, we have carefully studied the elimination of lines which we consider we are not equipped to manufacture, and concentrated on those lines which show us good profits and are easy to manufacture with our existing plant and facilities. We have improved the quality, appearance, packing and price structure of these lines, and results are now encouraging. We have developed a new product, which is now firmly established throughout Australia—Leggo's Tomato Paste (Continental style).

"We have substantial local orders on hand for deliveries up to March, 1954.

"We are now no longer dependent on export, although we have reasonable expectations of some profitable shipments in 1954."

The Future

Regarding the future of the business, this has naturally been giving your Directors a good deal of consideration. Our finances are and have always been rather strained. Our shares have never been popular on the market, due to the fact that for very many years, up to ten years ago, no dividend was paid on ordinary shares and even the dividend on preference shares, was some years in arrears. Consequently our ordinary shares have always been quoted at a discount, which has precluded the issue of additional ordinary capital at par.

The same difficulty confronts us now as our urgent need is for additional working capital.

We have already disposed of the back portion of the property for £26,000 and this to an extent will ease the financial position temporarily. We appear to be faced with the following alternatives:—

(1) Obtain further assistance from the Bank.

(2) Realise on the balance of the Company's freehold property and purchase cheaper and more suitable premises in which to carry on the business.

(3) Liquidate the Company.

These alternatives are all receiving careful consideration. Liquidation would, of course, mean forced realisation of stock and plant and the loss of any goodwill we have and almost certain loss of capital. Your Directors think this should be the last alternative. Every possible economy is being and will be explored.

One of the difficulties confronting the Board during the past few years has been the absence of production and sales budgeting and a monthly Profit and Loss Account. Steps have been taken to make good this deficiency.

Already we have accounts covering the first three months of the current year to September 30 and these, the Directors are pleased to say, disclose fairly satisfactory sales. Losses have been drastically reduced to a figure which may be considered reasonable, having regard to the fact that this period is normally one of the quietest in the food processing industry.

This has been verified by an outside Consultant, who at the Board's request has carefully examined the Company's operations over the period mentioned.

Without wishing to minimise the difficulties which lie ahead for this Company and indeed for every Company engaged in the Canned Food industry, your Directors trust that the current year may at least show a definite improvement on the one recently closed.

No dividend on the ordinary shares for the year to June 30, 1953, can be paid and the preference dividend for the half-year to the same date has also been passed.

Lincoln Mills (Australia) Limited

Spinners of Worsted Yarn, Knitters of Hosiery, Underwear and Outerwear.

g. Office: Gaffney St., Coburg, Vic. **'Phone:** FL 1271. **Directors:** E. T. H. Richardson (Chairman), R. S. Fox, L. E. Lloyd, A. Debenham, R. J. Cocks. **Auditors:** Wilson, Danby & Giddy.

28th Year ended June 30, 1953. Meeting October 30, 1953.

Trading improved considerably during the second half of e year, and rising wool values contributed to the record profit £136,086, an increase of £57,549 over the previous year. vidend was raised to 6d. per 8/- share (6¼%).

	1953.	1952.	1951.	1950.

serves and undiv. profits	**372,858**	330,744	325,943	310,015

Capital was reduced by the first repayment of £25,000 in spect of the redeemable 5% preference shares, which are payable by instalments up to 1960.

Stocks were £103,312 lower, despite higher wool prices and eater output.

Plant additions were the lowest for some years and after preciation of £48,694 the book value of plant at balance date as £25,801 lower than last year. Improved spinning machinery w becoming available will necessitate much replacement of isting plant over a period of years.

Full production was maintained during the first three nths of the current year, and demand, it is thought, should ntinue to be satisfactory.

At the Annual Meeting of the Company held on October 30, the airman, Mr. E. T. H. Richardson, delivered the following ad-ss:—

The Balance Sheet with Profit and Loss Account has been culated to all shareholders and I think it will be agreed that the ults shown are reasonably satisfactory, bearing in mind the r trading conditions which obtained throughout the textile ustry during the early stages of the period under review. ring the second half of the year trade improved considerably, much so that we were hard pressed to supply the demand for goods, and naturally this higher output resulted in a consider-le improvement in our profit earning rate. We were assisted, by the trend in wool values which rose steadily throughout season until May last, enabling us to sell our stocks to good antage. It should not however be overlooked that, whilst this a favourable effect upon the year's profits, the reverse could ly on some future occasion, and it is well to bear in mind that ol values, at the time of preparing this address, were more than times higher than pre-war.

Although the year's profit is a record, it cannot be regarded as olly satisfactory in relation to the capital employed in the iness, being only 8½ per cent.—after deducting tax at the new ced rates—on shareholders' funds totalling £1,585,000.

Balance Sheet

The Balance Sheet items do not call for very much comment. k overdraft was £120,000 lower than last year whilst trade litors and sundry provisions were higher by £36,000. Provision taxation would, of course, have been noticeably greater were ot for the recently announced and welcome reduction in com-y taxation.

Notwithstanding that this year's greater output required us to . at 30th June considerably more raw wool to carry us over l the opening of the new wool selling season, and although l values were higher than at June, 1952, we reduced our total ks by £103,000. The increase of £145,000 in book debts was wholly to the higher level of sales.

Capital has been reduced as a result of the first repayment of 000 in respect of the redeemable 5 per cent. preference shares, terms of issue of which provide for repayment of at least that in each of the next seven years, whilst on June 30, 1960, the nce then outstanding will become payable.

n my address last year I mentioned that we would consider g the £10,000 held in the Reserve for Post-war Contingencies ffset part of the cost of re-conditioning machinery. Although this work has proceeded steadily, we did not find it necessary to use the reserve for this purpose and consequently this year have changed its name to "Contingencies Reserve" as being more appropriate.

The enactment of the projected legislation in respect of long service leave would obviously call for the provision of a very substantial sum even to cater for its retrospective aspect.

Our additions to plant during the year were the lowest for some time and our commitments at the moment are not very high. However, the improved types of spinning machinery which are becoming available will without doubt involve us in a considerable outlay over a period of years. Here it is opportune to again draw attention to the need for alterations in the incidence of taxation as it relates to the accumulation of funds to meet today's very high cost of plant replacements.

We deprecate the re-introduction of price control on some textiles, feeling sure that the Australian industry can supply all the goods required and that normal competition in the trade would be more effective in controlling prices.

Prospects

Turning now to the prospects for the current year, it is pleasing that the new wool selling season has so far maintained the confident note upon which it opened. We have maintained full production during the first three months of the new year and your Board believes that we should continue to enjoy a satisfactory demand for our products. We have, throughout the recent period of unsettled trading conditions, retained consistently high standards of quality and our goods are very favourably regarded.

Our industry however is most vulnerable to competition from overseas countries where total wages costs are very much lower and the recent relaxation in import restrictions must be regarded with concern. We believe that the Australian textile industry has now achieved a high standard of efficiency and is entitled to fully protective tariffs, which should take into account not only the difference in wages costs, but also the fact that we have to employ adult male labour to a far greater extent than most overseas countries. Production costs too are necessarily higher in an industry catering for a limited home market, which restricts the opportunities to specialise and to make long production runs without altering the set-up of machinery.

In conclusion I wish to express the appreciation of the Directors to all the employees of the Company for their good work over the year and in this I feel sure you, as shareholders, would desire to join.

Lustre Jewellery Ltd.

Reg. Office: 168-174 Waverley Rd., East Malvern. **'Phone:** UL 6596. **Directors:** N. S. Dixon (Chairman and Manag. Director), W. J. Brown, J. Newbold, A. S. Dixon, P. Hosking. **Auditors:** Daniell & Sherlock.

5th Year ended June 30, 1953. Meeting September 29, 1953.

Reduction of sales tax from 66⅔% to 50% in September, 1952, improved trading, and a profit of £3,810 resulted after last year's loss of £1,511, but no dividend was paid.

Further reductions of sales tax to 16⅔% from September, 1953, will further benefit the company.

In his address to shareholders at the Annual Meeting on September 29, the Chairman, Mr. N. S. Dixon, made the following remarks:

I am pleased to state that the news I am to convey to you today is of a more pleasant nature than was the case this time last year.

As was explained to you then, although the company had sustained a relatively small loss for the year ended June 30, 1952, it had survived a period during which the very high incidence of taxation together with the stringent controls on credit had forced some businesses to cease operation.

Prior to the General Meeting of 1952 the Federal Government introduced its Budget, and it was announced that some relief was to be granted in the taxation of sales. In the case of jewellery, the rate was reduced from 66⅔% to 50%. This, combined with the normal benefits derived from the Christmas period, stimulated sales considerably. Realising that whatever ground had been lost during the recession had to be made up as quickly as possible immediately trade improved, your Directors effected the maximum profitable trading possible during the pre-Christmas period. Immediately after Christmas, trade continued buoyantly and, assisted by an increased demand for its goods, the company was then well on the way to recovery.

In reviewing the reaction of the recession on the company, truly it must be said that "it is an ill wind that blows no good." In comparing the accounts to June, 1953, with those of the preceding year, you will note that although turnover for the year just finished was reduced by 8.7%, the trading profit has increased by 6.3%. This was made possible by the drastic pruning of overhead during 1952, and an adjustment to the staff, which is now considered economically well-balanced.

Overseas Trends.

Last year, in addressing this meeting, I gave a brief resume of my visit to overseas countries—particularly England and the United States of America. I made mention that the fashion trends abroad indicated that jewellery would depart from the conservative designs of yesteryear, and in future articles of surrealistic design will be worn. This necessitates rapid changes in design to suit existing fashions and consequently a factory producing these styles must be geared for the quick tooling changes required. It is my pleasure to inform you that today Lustre Jewellery Ltd. is recognised throughout the trade in Australia as the most progressive manufacturer of jewellery in the country, and as American and Continental fashions continue to affect Australian fashions, so also will Lustre designs become a greater necessity.

I also mentioned that I brought from these countries numerous samples and ideas. Several have been produced by our factory and have proved highly successful. In addition, the remainder which cannot be affected by any fashion changes here, will take at least two years to merchandise. So you can see that it will be a long while before we run out of new ideas.

Sales Tax.

On Wednesday, September 9, Sir Arthur Fadden introduced the Federal Budget for the current year and although the retention of the annoying payroll tax was a disappointment, the relief afforded in sales tax from 50% to 16⅔% was joyfully received. It has been argued during recent years, and correctly so, that the Government's terming of jewellery as a luxury has been unjust. Now the reduction to 16⅔% has placed our products in a price bracket where the purchaser is not forced to look upon his or her purchase as an extravagance.

Import Restrictions and Tariffs.

Whilst we appreciate the assistance afforded the jewellery trade in this Budget, I feel that I cannot close my address to you without voicing a matter which is of paramount importance not only to our trade, but to Australian secondary industry in general. Now that the Government feels that the national economy is being adjusted satisfactorily there is talk of relaxing import restrictions, thus allowing goods, which because of their low cost of production overseas capture the Australian market and seriously injure the industries, which are vulnerable. It is not my prerogative to endeavour to outline the Australian Government's affiliation with the General Agreement in Tariffs and Trade, an international agreement which it entered into in 1947, but I do hasten to state that industry was not responsible for rising costs during recent years, and until such time as our costs have been reduced to a more competitive level the Government has a responsibility to our secondary industries to see that these foreign goods are prohibited, by imposing very high tariffs.

The jewellery trade in particular is seriously affected by this state of affairs. During the last war, jewellery factories were almost without exception the easiest to convert for the manufacture of precision instruments. Surely then, this asset—if for no other reason than that—must be preserved—not forced out of existence because due to the uncontrolled economy of the nation it cannot compete with goods being imported from foreign countries, where as I have already stated not only is the cost of production uncompetitive, but so also is the general standard of living.

Conclusion.

In conclusion, whilst in order to consolidate the operating strength of the company and in the ultimate interest of yourselves, we have refrained from distributing the profits of 1952-3, I do have the pleasure in advising that your directors feel that provided trade continues according to expectations, and working capital is not seriously handicapped, a small interim dividend may be declared after the result of the current six months' trading has been ascertained.

In his address accompanying the year's accounts, the Deputy Chairman, Mr. F. E. Lampe, said:

With the return to competitive trading conditions your Company has had a successful year.

For ten months of the year, trade was free from price control, with consequent flexibility of merchandising and benefit to the consumer. Recent statistics show that with the abolition of control, price rises of clothing and textiles have now been arrested for the first time in 14 years, and trading conditions are gradually returning to normal.

The Government re-controlled certain goods in May of this year, but in view of the evidence which has since accumulated, proving that the period of de-control was of such benefit to the community in arresting price rises, it is anticipated that the Government will completely de-control all clothing and textiles at an early date.

Sales.

Sales showed a slight reduction compared with 1951-52.

Gross Profit, Expenses, Net Profit.

Gross profit for the year improved. Expenses were reduced and net profit after tax was equivalent to approximately 5d. in every 20/- of sales.

Stock.

Stock in trade was maintained at a lower level throughout the year, assortments being comparatively reduced by import restrictions. At the start of the year we were limited to 20% of 1950-51 imports. The result has been a shortage of certain types of imported goods, but this has since been overcome to some extent through increase in quotas. At present we are restricted to approximately 40% of the 1950-51 imports.

As and when the Australian balance of payments position permits, import restrictions undoubtedly will be lifted.

Asset Backing.

Total shareholders' funds are £771,005. This means that the 150,000 preference shares have an asset backing of £5/2/9 in respect of each 20/- share.

Total shareholders' funds, less £150,000 preference capital, are £621,005. This means that the 514,500 stock units (representing £257,250 ordinary paid-up capital) have an asset backing of 24/2 in respect of each 10/- stock unit.

Net Profits.

The following review of net profits since the inception of this business as a Public Company will be of interest to shareholders:—

Year Ended 31st July	Net Profit after tax	Preference Dividend	Ordinary Dividend
1937	£31,526	7%	10%
1938	£30,526	7%	10%
1939	£30,298	7%	10%
1940	£38,427	7%	10%
1941	£30,010	7%	10%
1942	£28,939	7%	9.2%
1943	£31,392	7%	9.2%
1944	£27,415	7%	9.2%
1945	£28,124	7%	9.2%
1946	£31,686	7%	9.2%
1947	£36,594	7%	9.2%
1948	£43,973	7%	10%
1949	£35,021	7%	10%
1950	£40,553	7%	10%
1951	£49,423	7%	10%
1952	£18,221	7%	10%
1953	£42,858	7%	10%

Reserves.

Reserves were increased by £10,000 during the year. The total amount held in the various reserve accounts as at balancing date is £357,953.

Liquid Position.

Current assets (£500,759) related to current liabilities (£157,365) show a ratio of 3.2% to 1.

General

Australian costs have continued to rise during the year, although at a slower rate than previously.

This, on top of the very high level brought about by the inflation of previous years, is giving concern to your Directors and indeed, to all those engaged in retail trade.

Payroll represents approximately 75% of the total expenses of the average store.

The continued rise in the basic wage and consequent increases in other staff expenses and in payroll tax have had a serious effect on total overhead.

In addition, we must now face the possibility of the added xpense which will result from the introduction of long service ave.

This trend to higher and higher costs has other serious effects art from the influence on the prices we must charge our cus-mers. In an effort to keep down costs, the tendency is for staff be kept down below the level which many stores regard as ecessary to give their customers the quality and range of service r which they look and to which they are entitled in a progres-ve community.

That this regrettable tendency is already occurring is sug-sted by the following figures comparing wages and employment the main city and suburban retail stores over the last three ars:—

Wage of Senior Male Sales Assistant:

1st August, 1950	£8 17 0	
1st August, 1953	£13 12 0	+ 54%

umber of Staff Employed in Principal City and Suburban Stores:

July, 1950	14,751	
July, 1953	13,454	— 9%

It is beyond doubt that the tendency to a continuance of ris-g costs, not only in distribution but also in primary and second-y industries, is a major domestic problem, and it is the duty of mmunity leaders to do everything possible to arrest this un-sirable trend.

It is surely clear, for example, that at present in Australia we have gone as far as we can go on the question of shorter hours and consequent higher costs.

Any question of curtailing the shopping facilities by such ideas as Saturday morning closing must be resisted by the trade and by all the unions in the interests of the community and with a view to the desirable maintenance of full employment and pre-sent living standards.

Thanks.

On your behalf we tender our warm thanks to our staff for their splendid work throughout the year.

We are proud of our excellent staff, and we are doing every-thing possible to continue promoting courteous customer service and efficiency.

We thank our suppliers, both local and overseas, for their help.

We also thank our London Office personnel for their co-opera-tion.

We thank our customers for their support and invite their continued patronage.

Conclusion.

The year just passed could be summed up as one of satis-factory recovery to normal competitive trading conditions in the re-established buyers' market, and we look forward to the future with quiet confidence.

The following address was given to shareholders by the Chair-, Mr. John Sackville, at the Annual Meeting held on November

The printed report of the Directors and the Balance Sheet and counts for the year ended June 30, 1953, were circulated to you e days ago, and I will ask that they be taken as read.

Before formally moving the adoption of the Directors' Report n Financial Accounts, I should like to make some brief com-ts on the past results and activities of the Company and its re trading prospects.

Profit.

Your Directors are well satisfied with the profit result achieved he Company and its ability to both maintain profits and its dend rate despite a slight reduction in turnover. Future turn- and profit results may depend to some extent on the avail-ty and price of suitable material and piece goods, both of h are at present in comparatively short supply due largely to rt restrictions and the total inadequacy of import licences ted the Company for the importation of certain goods. Stocks by the Company are lower than for some years, but are well ced and reasonably priced. Turnover for the first four months e present financial year has been well in excess of the corres-ponding period last year and provided a steady flow of material and piece goods can continue, future turnover should be more than maintained.

Dividends.

As stated in the printed reports, and as indicated in the graphic illustrations therein contained, dividend payments exceeded those of last year. Although the bonus issue of £50,000 was only made on June 3 last, your Directors saw fit to pay the final dividend of 10% (7½% of which is tax free in the hands of the shareholders) for the half year ended June 30, 1953, on the full increased capital thus enabling shareholders to participate further in profits to the extent of £5,000.

Advertising.

Your Directors have again utilised the Annual Report as a medium for advertising to shareholders its products and to bring its brand names and in particular "Sackville of Melbourne" to the attention not only of shareholders but the general public.

Staff.

I again express on behalf of the Board and shareholders our sincere appreciation of the loyalty and co-operation of the staff during the period under review.

McPherson's Limited

Manufacturers and Distributors of Machinery, Machine Tools and Engineers' Supplies.

Reg. Office: 546 Collins St., Melb. **'Phone:** MY 270. **Directors:** S. B. Holder (Chairman), F. Grassick, Sir F. G. Thorpe, K.B., H. L. Hastie, D. G. Syme, W. D. McPherson, S. J. Thomas, S. Graham. **Auditors:** Anderson, Hodgson & Co.

Year ended June 30, 1953. Meeting October 15, 1953.

Turnover of the parent company amounted to £9.6 million, £760,000 lower than last year's record, reflecting the reduction of stock levels held by retailers. Consolidated profit was £57,340 lower at £483,676, giving a return on increased capital of 16.4%, out of which the usual 10% dividend was paid.

†"E" shares (issued to employees) rank equally for dividend with ords., but, at the discretion of the directors, may receive a rate up to 1½ times the ord. rate.

*Credited in 1953 with £7,770 bonus share issue by associated company and £16,516 profit on sale of shares in subsidiary company.

Capital rose by £713,701 during the year, proceeds being used to reduce the overdraft, which fell by £1,396,141. Current assets were £839,268 lower, the main decreases being in debtors and stocks.

Although import restrictions reduced stocks and sales, improved deliveries from local manufacturers helped the position.

Profits from subsidiaries were well maintained, with the exception of Tool Equipment Co. Pty. Ltd., which was affected by reduced orders and lower prices for high-speed steels. Production generally had to be restricted in line with demand, but there are signs that the market is picking up again.

Associated companies had a reasonably satisfactory year, with the exception of Renold Chains (Aust.) Pty. Ltd., which has now commenced production but whose sales are restricted by overseas competition.

The company has been manufacturing and distributing a wide range of machine tools, bolts and nuts, engineers' tools, etc., throughout Australia for many years. Head Office and research laboratories are in Melbourne, with warehouses at Sydney, Brisbane, Adelaide and Perth. Bolt works are at Richmond (Vic.) and Alexandria (N.S.W.), machine tool works at Kensington, pump works at Tottenham, and foundries at Tottenham and Kyneton, Victoria.

The following are subsidiaries:—

Patience & Nicholson Ltd., Maryborough, Victoria — manufacturers of twist drills, taps and dies.

Tool Equipment Co. Pty. Ltd., Sydney, N.S.W. — manufacturers of milling cutters, reamers, etc.

F. W. Hercus Manufacturing Co. Ltd., Adelaide, S.A. — manufacturers of machine tools.

Ajax Bolt & Rivet Co. Ltd., Wellington, N.Z. — manufacturers of bolts, nuts and rivets.

Large interests are also held in Hard Metals Pty. Ltd., Wiltshire File Co. Pty. Ltd., Australian Abrasives Pty. Ltd. and Renold Chains (Aust.) Pty. Ltd.

The following address by the Chairman, Mr. S. B. Holder, was circulated to shareholders with the Annual Accounts:—

I have much pleasure in presenting to you the ninth Annual Report of McPherson's Limited, covering the twelve months ended June 30, 1953. The original business from which the Company grew was founded in 1860 and has now completed ninety-three years of service to the engineering industry of Australia.

Sales, Profits, Stocks

Sales for the year totalled £9,626,958, compared with the record of £10,391,411 established in 1951/52. The whole of the reduction occurred in the second half of the financial year, the figures to December 31, 1952, being slightly in excess of those for the same period of the previous year. An increase in the number of individual sales from 823,221 to 844,579 on a lower turnover reflects the general tendency of trade during the year. After the heavy buying of the years immediately following the war, users and retailers found themselves with heavy stocks and reduced financ with the general decline in business they endeavoured for a tim to live on their stocks and now are buying in smaller quantiti to meet their current requirements. This gives a truer pictu of the actual demand and enables us to organise our ordering, bo local and overseas, and the production in our own factories, on more realistic basis.

Strict control of our own stocks has been maintained throug out the year and the total value on hand at June 30, 1953, wa £3,106,639, a reduction of £103,834 on last year's figure.

The import restrictions imposed in March, 1952, had some effe on our stocks and sales as we had insufficient quotas to obta licences to import our total requirements. However, improv deliveries from local manufacturers have helped the position.

The overall percentage of gross profit to sales by the war houses for the year showed a further small decrease, despite th fact that Government Price Control of the lines handled by th Company had practically ceased. Expenses continue to increa

t the reduced profits of the warehouses have been to a great tent offset by improved results at the factories.
The final net profit of £475,320, after providing £393,800 for in-me tax and £120,977 for depreciation, compares with £481,645 st year, after tax of £394,300 and depreciation of £130,835.

Taxation and Depreciation

As the accounts were completed prior to the presentation of the deral Budget, provision for taxation was made on the same basis the previous year.
Initial depreciation of 20% has been written off all additions ring the year to fixed assets other than property. Your Direc-rs again considered it prudent to take this action, quite apart om whether or not any allowance is made by the department the calculation of taxable income.

Dividends

Your Directors are recommending the payment of the follow-g dividends from profits of the year ended June 30, 1953: On dinary stock, 10%; on "E" stock, 15%, to be paid on October 15, 53. These rates are the same as last year, but the total dividend ll absorb £304,209 compared with £231,779 paid last year because the new capital issued during the year. The balance of the ar's profits, £171,111, will be transferred to Reserves.

Capital

In my last report I mentioned that in August, 1952, we had tained permission from the Capital Issues Board to issue a rther £693,000 of capital. These shares were taken up by stock-lders in October last and during the year some additional "E" ares were issued to employees. The bulk of the new capital was quired for the reduction of our overdraft, which fell from 225,299 at June 30, 1952, to £10,407 at June 30, 1953. As a sult of the new capital raised and the retention by the Company a large proportion of profits earned, there has been a marked crease in the surplus of current assets over current liabilities.

Premises

During the last few months extensive alterations have been rried out at our Adelaide premises, and at the end of July, 1953, e majority of the sales departments were transferred to our joining property. The new building was erected by the Company ne years ago with a view to its occupation when our Company's siness in South Australia warranted the additional space. In e meantime, the premises had been let to tenants. The additional ace and the more convenient lay-out of the new warehouse will able us to carry on our business more efficiently and economi-lly than was previously possible, and will allow for further pansion.
On July 1, 1952, we established our own office in Brisbane to ndle our wholesale business with the merchant trade throughout eensland in bolts and nuts and pumps of our own manufacture. is business was previously undertaken for us by agents in that y. The new arrangement has proved very satisfactory and has abled us to give greatly improved service to our many good ends in Queensland.
Within the last few weeks negotiations have been completed r the purchase of a property in Gladstone Street, South Mel-urne, to which it is proposed to transfer all our Melbourne bulk ores. The area of this property is 91,000 square feet. There ill be many advantages in having all our stores under one roof d the transfers will make available additional space for the use our machine tool works at Kensington and our pump works at ttenham. At Kensington, particularly the space at present used a machinery store is urgently required for manufacturing activi-s.
It is our intention to sell the present properties in Jeffcott reet, West Melbourne, but this cannot be done until some time the New Year, as we will not obtain vacant possession of the w building until about June, 1954.

Subsidiary and Associated Companies

As in previous years, the annual accounts of our subsidiary mpanies are published in detail with this report. With the ex-tion of the Tool Equipment Co. Pty. Ltd., profits have been well intained and although production has had to be restricted in cordance with the decrease in orders, there are signs that the rket is picking up again. The Tool Equipment Co. has been rticularly affected by reduced orders and the position has been gravated by the necessity of providing in stock values for the op which has occurred in the world price of high speed steel.
Our Associated Companies, with the exception of Renold Chains ust.) Pty. Ltd., have also had reasonably satisfactory years. Renold Chains (Aust.) Pty. Ltd. are now producing chain which accepted as equal in quality to the chain produced by the Renold & Coventry Chain Co. Ltd., at Manchester, England, but les so far have been insufficient to enable the Company to operate a profit; this is partly due to heavy importations of chain from reseas immediately before the local chain came on the market, d partly to the higher production costs in Australia.

Works

The benefit of the re-organisation of the Richmond bolt factory s very noticeable in the early part of the year, when production ached a high figure. However, since then both our bolt fac-ries have had to restrict production in line with the lower mand. It has become evident recently that the demand is again reasing, although the restriction of large Government and semi-Government construction projects means that orders are mainly for the smaller sizes of bolts and nuts. This will tend to leave some sections of the factories short of work.
Because our capacity for the production of bolts and nuts exceeds the present demand in Australia, we have been looking into the possibilities of overseas markets. With this in view, an executive of the Company recently spent three months in the islands and countries to the north of Australia, but found that the bulk of the business—which, in any case, is not substantial—is in the hands of Japanese manufacturers at prices with which we cannot compete. However, agents have been appointed for Malaya and a moderate amount of business is being done with that country.
The machine tool works and the Ajax pump works have both had good years, despite some further cancellations of orders.

Overseas Visits

During the year two other executives of the Company made overseas visits. Our secretary spent some months in England and on the Continent and the manager of our Richmond bolt factory is due back this month after an extended tour of the principal bolt manufacturing countries of the world.
Generally speaking, the methods and equipment in our bolt factories at Richmond, Victoria, and Alexandria, N.S.W., compare satisfactorily with factories in both England and the United States.

Employees

The happy relations between the Company and its employees have been maintained, and I would like once again to express the Board's appreciation of the loyalty and co-operation shown by all employees throughout the year.

Future Prospects

The Company has embarked on the present financial year with confidence that we will be able to maintain our present share of the business offering. Sales since June 30 have continued on a satisfactory level although a little below those of the same period last year, and we feel that the slight improvement in business already evident throughout Australia will continue and will be reflected in our own results.

E.5

Mount Morgan Limited

The following are extracts from the address given by the Chairman, Mr. J. M. Newman, at the Annual Meeting held on October 29:—

The accounts which have been in your hands since the end of last month show that the Company earned a net profit of £448,026 as compared with £385,578 last year, an increase of £62,448, after making provision for £100,000 depreciation and writing off the whole of the expenses incurred, viz., £41,261, in connection with the issue of new capital in February last.

It will be noted that interest charges are much higher than last year—an increase of £18,638. This is largely attributable to the slow realization of metals, particularly copper. A peak bank overdraft of just under £1,000,000 was actually reached. The position was partly relieved by exporting blister to the United States of America.

The total operating expenditure at the Mine was £339,125 higher than last year, but included in the expenditure is £186,866 for the removal of 882,347 tons of overburden which is not chargeable against this year's ore production for the reasons fully explained in the Directors' Report. This amount represents the cost of removing overburden in excess of the average ratio of 1.8 tons to each ton of ore mined. It will be observed, however, that the tonnage of overburden allocated against this year's ore production is still 20,000 tons greater than the quantity removed and charged in the previous year when the ore then mined exceeded this year's output by 27,000 tons. Under the circumstances we have done well to reduce our actual expenditure on ore production for the year. The results highlight the wisdom of installing large capacity modern equipment, particularly the 5 cu. yd. shovel.

The total revenue from all Mine products shows an increase of £205,610 as compared with last year's figure. This results from a higher average price for copper and a 10% increase in output of that metal, plus the realization of a much larger tonnage of pyrites, the increase in which was 20,000 tons.

Again revenue was augmented further by £57,974 received from Gold Producers' Association Ltd., representing an average premium of 17/6.2d. per oz. on 66,200 ozs. gold sold by this Association on our behalf. This premium compares with £26,812 received last year on the much smaller quantity of premium gold handled. The combined results of these variations account for the satisfactory increase in the net profit for the period under review. Under the circumstances the Board had much satisfaction in maintaining dividend distribution at the previous rate of 2/- per stock unit in respect of the year's operations.

Balance Sheet

You will no doubt have noted that the Balance Sheet discloses outside liabilities amounting only to £158,712 as compared with £744,354 at last balancing date. This reduction is due to the Company's account with its bankers being converted from an overdraft to a credit balance by selling blister abroad and by receipts from call moneys on our issue of Convertible Redeemable Preference Shares.

The value of metals on hand and in course of treatment at the Refineries is again shown in the Balance Sheet at a substantial figure, viz., £1,601,863 against which we have received advances of £1,066,401. This valuation is based on the same prices of metals as last year. Copper stocks were 51% higher, due to an increase in production and a falling off in sales over the second half of the year. On the other hand, the quantity of gold in course of realization was considerably reduced as the gold content of blister copper produced was lower than in the previous year, and gold sales as distinct from copper continued throughout the period.

Expenditure on machinery, plant and buildings during the year amounted to £157,064 in respect of which a summary is given in the Directors' Report. The main items are drilling equipment a modern large churn drill costing £15,944; balance cost of installing the second Symons cone crusher £11,290; portion of cost of pulverised coal storage and feeding system for the Smelter, £12,531; part cost of No. 3 pulverised fuel boiler for the Power House, £31,542; and £68,882 on housing, motor trucks and workshops equipment, etc. There was also expended £4,444 at Dawson Valley Colliery on housing and sundry equipment.

Mine Production

The total quantity of material mined and handled was 3,431,369 tons which is an increase of 34% on last year's figures. Of this tonnage, 2,521,004 tons comprised overburden delivered to the dumps. This compares with 1,618,842 tons dumped last year. A contributing factor of the large increase in material handled was the new 5 cu. yd. shovel which operated throughout the year. Since the end of the period the new churn drill, Bucyrus Erie model 42T, has further enhanced the effectiveness of this shovel. A weekly output of 80,000 tons or more is now a regular feature of our open-cut operations.

The total ore treated at the two mills was 834,200 tons, a reduction of 6½% on last year's throughput. However, the average grade at 2.45 dwts. gold per ton and 0.92% copper was higher by 0.26 dwts. and 0.22% respectively and the metals recovered higher by 3,520 ozs. gold and 1,345 tons copper.

The Managing Director has referred in his report to the "steep increase in the proportion of old filling and burnt ore in the feed to No. 1 Mill" This means in effect, that our No. 1 Mill ore has become temporarily more refractory. Our Mill Staff assisted by our Consultant is devoting every effort to combat this refractory condition and I have no doubt will succeed in remedying the slightly deteriorated recovery recently experienced.

It is important to note that the average grade of ore treate is still within the estimates of the published ore reserves, viz 2.68 dwts. gold and 1.03% copper as will be seen from the reca culation of ore reserves as detailed in the Managing Director Report. The 17,500,000 tons shown therein gives a life of at lea 20 years at our present rate of extraction, with no diminution i grade.

Smelting

The smelter produced 6,237 tons of blister copper for the yea being an increase of 10% on last year's output and a record sinc smelting was commenced in 1939. The metals contained in thi blister copper were—gold, 61,640 ozs; silver, 24,220 ozs.; and cop per, 6,154 tons, showing a decrease in gold production of 11,28 ozs. and an increase in copper of 570 tons. The reduction in gol output reflects the tendency towards a higher copper/gold rati in the deeper levels to which I made reference last year, but i has been accentuated by the virtual exhaustion of the stock o direct smelting high-grade gold ore.

Despite a higher throughput at the Smelter, stocks of concen trates on hand had increased at the end of the year. These ar low grade and must await a convenient time for smelting. O August 28 last the reverberatory furnace closed down for overhau and repair. Advantage is being taken to lengthen the furnac by 12 ft. so as to provide adequate capacity for the treatment o current and future mill products. The Smelter should resume a the end of November and production of blister will be on a muc higher level than formerly, particularly during the period whe the accumulated stocks of high-grade concentrates are being treated. The stocks of low-grade mentioned above will then b overtaken. As time goes on our Smelting Staff is constantly making improvements in our smelting technique. Last year' smelting performance was a big improvement on previous effort and during the present shut-down our whole set-up will be im proved in a far-reaching manner—in fact, we will have a really modern plant.

Research

The Research Department was fully occupied throughout th year conducting tests on various metallurgical problems with a view to effecting improved recoveries and on routine work. Constan attention is being given to developments overseas, particularly i regard to hydro-metallurgy to which I made reference last year and to supplement laboratory work the arrangement mentioned last year to collaborate with another interested mining company and the C.S.I.R.O. in pilot plant tests is being implemented. The pilot plant is well advanced and it is expected that tests wil commence early in the New Year. Our knowledge of high pressure leaching processes to which I made reference last year was advanced during the visit to Australia of Professor Forward—the originator of the process—and a further sample has been forwarded for experimental testing in Canada.

Costs

The Queensland State Basic Wage increases during the year totalled 11/- per week. The minimum rate payable by the Company at the end of June last was £11/15/4 per week, an increase of 4.9% as compared with an increase of 22.4% the previous year.

With the exception of mining, unit costs rose during the year, but it is hoped that we are now approaching a period when costs will be reasonably stable. The much lower quarterly cost of living wage adjustments during the year are indicative of the foregoing, and it seems appropriate that the Federal Arbitration Court has by its recent decision focussed attention on the pernicious results of these automatic adjustments. It is the constant aim of the Board and Management to reduce costs by improved plant and technique, which objective together with employee co-operation if realised in industry generally, cannot fail to bring stability.

Production of pyrites was somewhat lower than last year, but sales at 55,441 tons were as previously indicated, considerably higher. Production and sale of pyrites is having the Board's constant attention, and steps will be taken to increase the output as the demand increases. You will have observed from the Directors' Report that the Government has announced that the Provisions of Section 23A of the Income Tax Assessment Acts are to be extended for a period of seven years and that pyrites is to be added to the list of minerals to which this section applies. This will give the Company additional tax-free profit to the extent of 20% of the profits earned from this source.

Water and Power Supplies

I must mention two recently completed and important projects which vitally affect the future of our undertaking. They are first, the Mount Morgan Shire Council's Town Water Supply Scheme, and second, the interconnection between the Capricornia Regional Electricity Board's Power Station and the Company's Power House.

At all times in past years the Company has been dependent for its water supplies on rainfall available to the catchment area feeding its own dams. On many occasions delayed annual rains have seriously menaced Mine operations and we have even at times expended very considerable sums of money on freighting water to avoid a Mine shut-down. From now on there need be no anxiety on this score, for with access to Fletcher Creek water via the Council's Pipe Line, adequate supplementary supplies are assured.

In like manner our power needs can at all times be maintained or augmented from the Mains of the Capricornia Regional Electricity Board. As a matter of interest I may state that during the present shut-down of the Smelter resulting in loss of the

m normally supplied from the waste-heat boilers, we are drawauxiliary power from the Regional Electricity Board, thus iding the necessity to reduce mill throughput.

Additional Capital

Since our last meeting your Directors have carried out their ressed intention of raising additional capital for plant reconction and modernisation including additional overburden real to ensure continuity of ore supply from the Sugarloaf sec of the orebody. The new capital amounting to £700,000 was ed in February last, the shares being fully paid at 20th June. Shareholders will be interested to know that plans are taking pe to modernise the existing plant and in particular to extend modify the milling plant to make it capable of the improved metallurgical results which extensive laboratory work and plant experience have shown to be possible. The expanded overburden removal campaign is already under way and improvements to general service facilities such as stores, changehouses, etc., are also in progress. The whole programme will take some years to complete, but your Board is confident that its fulfilment will produce worthwhile economic results.

Conclusion

In conclusion, although there is still some confusion in the matter of price of copper, I think we should count our blessings, particularly our very satisfactory ore reserves, our high-class staff, and our efficient operators, who can be said in general to be co-operative with the Management for the good of the enterprise.

Moran & Cato Limited

Manufacturing, Wholesale and Retail Grocers.

. Office: 277-285 Brunswick St., Fitzroy. **'Phone:** JA 3131. **Directors:** Col. Allan Spowers, D.S.O., M.C. (Chairman), A. L. Moran (Joint Manag. Director), E. A. Cato (Joint Manag. Director), L. J. Brailey, L. Julian. **Auditors:** Flack & Flack.

Period ended August 1, 1953. Meeting November 20, 1953.

Net profit of £226,831 was £25,000 higher than last year, iite a reduction of £100,000 in trading profit. Usual divid of 10% was more than twice covered.

The group operates a chain of 222 retail grocery stores in oria, New South Wales, Tasmania and South Australia two subsidiaries in the wholesale field—Sydney Grocery Ltd. and Australian Wholesale Grocery Pty. Ltd.

Due to further intense price cutting in the grocery trade, s profit margins were reduced, but this was offset by eased turnover.

Several branch shops were modernised during the year.

Stocks were reduced by £234,709 and now stand at the mum for safe trading. Last year's overdraft of £77,248 converted to a credit balance of £199,088.

At the Annual Meeting held on November 20, the Chairman, Allan Spowers, reported to shareholders as follows:

The aggregate net profit at £238,401 available for distribution ars somewhat better than last year, but your attention should irected to the fact that the year under review contained 53 s of trading, as against 52 for the previous term, and various opriations made prior to arriving at that balance were, at the time, substantially less than in 1952.

The amount of £30,000 set aside last year as a provision for ible stock price adjustments still remains intact and could sed for other purposes if the necessity arose. Income tax sion is £81,850 below last year, a welcome reduction from the rates of war and post-war years. This reduction has enabled o strengthen our reserves while maintaining the dividend at customary rate. Consideration has been given to the problem ong Service Leave which will, in all probability, be introduced e near future in Victoria. Shareholders will have noted with faction the sound liquid position of the Company, and we are dent that that problem can be dealt with without undue disnce of our financial structure.

Stock value at £868,305 shows a reduction of £234,000 as against year, and we have now reduced this item to a satisfactory . When the large number of branches through which your pany operates is taken into consideration, it will be appreciated it would be dangerous to reduce stocks much below this point. reduction is reflected in our cash position.

Reduced Profit Margins.

Those of you who were present at our Annual Meeting last may remember that reference was made to a reduction in rate of gross profit in the period under review. That reduc was continuous throughout the year, largely as a result of price-cutting in all sections of the grocery trade. It has persisted since with increasing intensity of competition. Apart from a careful scrutiny of expenses and judicious purchasing of stock, our only means of overcoming it is by an improvement in turnover, and I am glad to say that during this year a moderate increase has been shown. To maintain this, however, is becoming increasingly difficult, but steps are being taken to promote it.

Among these is an extensive programme of shop modernisation. Shareholders will realise that during the war and the immediate post-war years little could be done by way of maintenance and nothing in the way of reconstruction. In the past few months, however, several of our branches have been converted to present day requirements and two new branches have been built. It will be some months before our programme is completed, but we are satisfied that good progress is being made. We believe that if we are to hold our position, this work is of primary importance, and we are sure that shareholders will be proud of the results. During the year two shops in areas that have become highly industrialised have been closed as the returns shown by them were progressively diminishing. Land for future expansion has been secured in several areas, but the high cost of building and the difficulty of securing competent staff have caused your Directors to proceed with caution.

Self-service Stores.

During the year there has been a great increase in the number of self-service grocery establishments, and your Directors have this problem continually in their minds. The business of Moran & Cato has been built on service to the customer, and it would be a rash man who would suggest a departure from this policy. I would like to assure our shareholders that the matter will not escape attention, and if some change is thought desirable we will be prepared to meet it.

Metropolitan Dairies Limited

Wholesale and Retail Dairymen, Suppliers of Milk and Cream.
Reg. Office: 218 Nicholson St., Fitzroy, Vic. **'Phone:** JA 4845. **Directors:** R. Farquhar (Chairman), F. M. Dale, F. J. Cayley (Manag. Director), W. L. Hicks, A. Siebel, Lieut.-Col. W. C. Cayley (Manag. Director), F. W. Cayley. **Auditors:** Gourlay & Cust.

17th Year ended June 30, 1953. Meeting October 7, 1953.

Group sales were a record at £946,597, being 57.3% higher than in the previous year. Profit was £33,118, and after payment of preference dividends, equalled 27.2% on ordinary capital, giving a twofold cover for the usual 12½% dividend.

An increase of 57.3% in gross sales over last year's record was reported by the Acting Chairman and Joint Managing Director, Lt. Col. W. C. Cayley, to shareholders at the Annual Meeting held on October 7. His address reads:

It is my pleasure in the absence of the Chairman, Mr. R. Farquhar, who is at present recovering from a recent illness, to submit to you on behalf of the Board, the 17th Annual Report of the Directors and the Statement of Accounts of the company for the year ended June 30, 1953.

Share Capital.

During the year capital invested in the company has been increased by the issue of 104,212 ordinary 5/- stock units at par to shareholders on April 1, 1953, and the allotment of 44,025 ordinary 5/- stock units as consideration for purchase of outside shareholders' interests in our subsidiary company, Melbourne Milk Supply Ltd., and the allotment of 25,000 ordinary 5/- stock units to a dairyman vendor.

Issued and paid-up capital of the company now stands at £187,521, of which £147,521 is ordinary stock.

Comparison figures of previous years are as follows:

1950	£82,109
1951	£118,159
1952	£144,212
1953	£187,521

Turnover.

Steady progress has again been maintained in sales of milk and cream, gross sales of the company and its subsidiary reaching the record figure of £946,597, an increase of £344,746, or 57.3% on that of the previous year.

A comparison of sales over recent years, together with the percentage increase on the base year 1949 (the first year after the amalgamation with Cayley Bros. dairy business at Preston) is as follows:

	Sales	% Increase on Base Year
1949	£188,041	—
1950	295,195	56.9%
1951	477,056	153.7%
1952	601,851	219.7%
1953	946,597	403.2%

Milk sales for the year amounted to 4,034,518 gallons, an increase of 1,174,909 gallons over the previous year.

Analysis of each £1 of the Company's Sales.

The following table gives shareholders an analysis of ea £1 of your company's sales for the year, and clearly shows t small amount paid to shareholders in the form of dividends, retained as reserves for use by the company in future years:

Milk and cream purchases	15/2	75.8
Wages, salaries and superannuation	1/10	9.3
Processing, distribution and administration expenses	1/5½	7.3
Income, payroll and land taxes	0/7½	3.2
Shareholders' dividends	0/4¼	1.8
Reserves and profits retained for use in the business	0/3¾	1.5
Depreciation and amortisation of assets	0/3	1.1
	20/-	100%

Net Profits.

Consolidated net profit on trading has again been a reco and has kept pace with the increased turnover and capital inves ment.

This year after providing for £9,396 depreciation, £25,175 f income taxes and writing the sum of £2,615 off goodwill and tra marks, the aggregate net profit amount to £29,834.

Comparison figures of previous years are as follows:

1949	£4,870
1950	£15,313
1951	£18,695
1952	£23,422
1953	£29,834

It will therefore be seen that the growth of the business h been developed on stable lines, and net profits have increase steadily each year, thereby providing a steady return to shar holders.

Subsidiary Company.

During the year this company acquired all shares held by ou side shareholders in the subsidiary company, Melbourne Milk Su ply Ltd. on terms satisfactory to both those shareholders and t Metropolitan Dairies Ltd. This has resulted in Melbourne Mil Supply Ltd. becoming a wholly owned subsidiary of this compan in which the company's investment at June 30, 1953, was £71,17 which includes an advance of £14,000.

This action was considered desirable to enable the most eco-cal functioning of the subsidiary company, and is believed to the best interests of shareholders in both companies.
The new milk receiving and processing plant established by ourne Milk Supply Ltd. at Reservoir commenced operations pril 1, 1953, and earned a small profit for the 3 months period une 30, 1953.
At the present time this plant is receiving and brine cooling gallons of farm milk daily, and pasteurising and bottling gallons of this intake. The balance is distributed in bulk to processors.
It is expected this unit will provide for the company's expan- for a number of years, and enable efficient and comfortable ling of the processing and bottling of the company's total ut.

Balance Sheet.

The Consolidated Balance Sheet of the company and its sub-ry shows the following asset position:

	1953	1952
Fixed assets	£311,545	£215,822
Loans and investments	10,038	11,339
Current assets	85,115	56,395
Intangibles	1,975	2,830
	£408,673	£286,386

Liabilities as at June 30, 1953, are as follows:

	1953	1952
Loans	£17,700	£17,700
Current liabilities (incl. final dividends)	152,200	86,698
Shareholders' funds	238,773	173,993
Interests of outside shareholders in Subsidiary Company	—	7,995
	£408,673	£286,386

Staff.

Opportunity is again taken to express the Directors' thanks and appreciation to all employees of the company. Without their continued co-operation in the company's interests, and their good team work, the favourable results for the year could not have been achieved.

Future Prospects of the Company.

Prospects of the company for the future appear bright, should normal trading and economic conditions continue as at present.
The high quality of our product, "Pura Milk," together with the service supplied, we are confident, will maintain the goodwill of our customers, viz., the public, the shopkeeper and the processor.
Your Directors look forward to a continuance of favourable results from trading in the current year.

Mineral Drillers Ltd.

Office: 27 Hunter St., Sydney. **Melb. Share Register:** 360 Collins St. **'Phone:** MU 7441. **Directors:** W. H. Smith (Chairman), P. J. Kirkwood (Manag. Director), F. B. Clapp, C. W. Smith, J. Dews. **Auditors:** Cook, Tomlins & Mirams.

6th Year ended June 30, 1953. Meeting November 9, 1953.

With the reduction in public works expenditure, trading was difficult and turnover was slightly lower.

Profit fell by £38,000 to £61,954, and ordinary dividend was 13½% on larger capital.

the Annual Meeting held on November 9, the Chairman, H. Smith, said:

Net profit for the year ended June 30, 1953, before providing taxation but after providing £9,715 for depreciation of fixed was £90,954. From this figure must be deducted £29,000 taxation applicable thereto, and after bringing forward an ad- balance of £7,359 the total amount available in the Appro- tion Account was £69,313.
From the amount so available, £53,362 has been appropriated dividends, leaving a balance of £15,951 to carry forward to next

Trading.

Trading conditions throughout the year have been more diffi- occasioned by a reduced spending allocation in various public and a general easing of conditions, with a slightly lower ter and the resultant reduced profit. However, trading has been established on a sound steady basis, and sales for the current year to date indicate that this basis should continue.

Uranium Leases.

Recently, the Government passed an ordinance whereby leases to mine uranium ore in the Northern Territory may be applied for and granted. Prospectors and mining companies will be permitted to enter aboriginal reserves, and these developments could result in increased activity in uranium mining with new companies being formed and others changing over to the search and mining of uranium ore. They would no doubt require prospecting and mining equipment and benefit could derive to this company in a further avenue of demand for diamond drilling equipment.
Further development has been made in the company's diamond tool division, and this production is proving an increasingly valuable adjunct to the company's potential.

Martin & King Industries Ltd.

Reg. Office: 1085 High St., Malvern. **'Phone:** U 9236. **Directors:** T. H. King (Chairman), Sir Robert W. Knox, W. J. King, J. E. McEncroe. **Auditors:** W. B. Watson (Watson,Niven & Co.).

2nd Year ended June 30, 1953. Meeting September 28, 1953.

In the second year as a public company, profit rose by £2,651 to £39,693. Ordinary dividend was again 9% but, in order to conserve funds for expansion, no dividend was paid on the "B" shares which are not listed.

The company was formed in 1951 to acquire Martin & King Pty. Ltd., including properties at Malvern and Westall (between Clayton and Springvale). The Malvern factory, established in 1888, specialised for years in custom body repairs, although since the war most attention has been given to large-scale production of motor vehicle bodies and general sheet metal manufacture.

The new factory at present handles mostly railway rolling stock, but is also being specially equipped to increase the range and scale of the work now carried out at Malvern. It is expected that the transfer of production and assembly departments to Westall will be completed within the next few months.

Net tangible asset backing (book values in consolidated balance-sheet)—5/7 for each 5/- share.

At the Annual Meeting on September 28, the Chairman, Mr. T. H. King, reported that the company successfully tendered for the manufacture of 120 carriages for the Victorian Railways suburban system. His address reads:

Profit

Profit was slightly higher than previously and an additional £5,000 was this year earmarked for income tax. Reduction in the latter brought about by the recent heartening Federal Budget, will serve to strengthen, still further, the Directors' policy of devoting all possible energy to the development of Westall.

Reserves

You will note that £25,000 has been transferred to this very necessary fund, making the total now £75,000.

Fixed Assets

During the year, this item has substantially increased, primarily owing to our continued building operations at Westall and, to a lesser extent, the increase in plant and equipment there.

The Board proposes to maintain its scheduled expenditure of this nature during the current year as being the soundest possible insurance in the readjustment period through which the country is now going.

Dividend

The Directors recommend to shareholders the payment of a 9% dividend on the 600,000 ordinary shares only. This will absorb £13,500 and will be payable on the 30th instant.

I would draw your attention to the fact that no dividend is proposed on the 600,000 "B" shares, as the holders of these intend that the amount involved (£13,500) be retained in the Company's funds for its current developmental programme.

In other words, the "B" dividend is passed so that the Company may benefit.

Westall

A great deal of progress has been made in this direction since we last met together. The areas now under cover, and being utilised for production, respectively, are well up to schedule.

Throughout the year there has been a steady transfer of production and assembly sections to Westall and, on present plans, the main manufacturing centre of the organisation will be located there from next year.

Much is expected of this Westall project. With its modern layout, ample space, private rail siding and proximity to passenger rail service, much can confidently be expected of it.

Considerable thought has been given to the welfare of em ployees, not only in the ideal working conditions offered but als in the provision of a first-rate amenities section—the initial pa of which is now completed.

Westall is already proving its worth in connection with ou rail and several of our body contracts and Directors expect tha the increased supervisory and production efficiencies possible the will have a distinct bearing on the current year's figures.

Malvern

Consideration is now being given to the fuller utilization o the main Malvern premises for body repair work.

There is ample scope for a large-scale extension of this phas of our activities and every effort is being made to widen its appe to car owners. Several new services have already been installe

Martin & King Services Pty. Ltd.

The expansion of the Company necessarily calls for change from time to time, in its organisational structure.

Arising from contacts made when I was abroad last year an from others locally the Directors decided during the year to for a new subsidiary, "Martin & King Services Pty. Ltd." to handl primarily such new business. There is little development in thi direction as yet but a deal of attention will be given to this, an similar moves, during the current year.

It is obvious that Westall will give the Company greatly im proved facilities for taking advantage of new opportunities as the arise and the early formation of this new subsidiary capitalize that fact.

Contracts

In addition to current rail, bus and car body contracts, th Company recently successfully tendered for the manufacture o 120 carriages for the Victorian Railways suburban system.

The contract was obtained in competition with both local an overseas firms and gives an indication of the Company's standin and capabilities in the rolling stock field.

Commenting on contract work generally, I would say tha competition has considerably hardened during the year and doe not look like easing in the foreseeable future.

However, the Company's good reputation in the industry an its sound nucleus of experienced personnel have enabled it—an I am sure will continue to enable it—to obtain its share of th work offering.

Through changes recently made in the duties of executiv staff, it is now possible to explore more fully than previousl other avenues of production and initial results stemming fro this policy can be expected during the current year.

Directors

I cannot speak too highly of the willing assistance given me r the year by my colleagues on the Board and on my own be- f, and yours, I tender them our sincere thanks.

Sir Robert Knox retires by the effluxion of time and, being ible, offers himself today for re-election.

Auditor

Once again, thanks are due to Mr. W. B. Watson and his able staff for the considerable assistance rendered by them oughout the year.

We are very happy in this association and trust it will long continue.

In accordance with the Articles of Association, Mr. Watson retires but, being eligible, offers himself for re-appointment as the Company's Auditor.

Staff

The Directors pay tribute to the members of the executive, production and administrative staffs for the excellent co-operation with which they have assisted in the conduct of the Company's affairs.

The success achieved over the past year has been due in no small measure to the combined effort of all concerned.

Metropolitan Industries Ltd.

(Formerly Metropolitan Ice & Fresh Food Co. Limited)

r. Office: 17 Bedford St., North Melb. **'Phone:** FJ 1171. **Directors:** H. E. Thonemann (Chairman), Sir Clifden Eager, K.B.E., Q.C., M.L.C., C. R. Duncan, Brig. R. W. Tovell, C.B.E., D.S.O., M.L.A. **Auditors:** Hancock & Woodward.

16th Year ended June 30, 1953. Meeting October 14, 1953.

Profit receded by £13,183 from last year's record to £50,369, urning 13.8% on capital. Dividend was reduced to 10% by ission of last year's bonus of 1%.

Net tangible asset backing (book values in consolidated balance-sheet)—Pref., £26/17/3; ord., £1/9/11.

the Annual Meeting held on October 14, the Chairman, Mr. Thonemann, delivered the following address:—

many of you are doubtless aware, I have just returned from overseas on the Company's affairs, and I have been very ed to note, on my return, some important changes in the eco- and financial policy of the Commonwealth Government. I of course, to the reduction in the rate of Company Tax—a which was, indeed, long overdue. So many Annual Meetings mpanies have been held since this was announced, and so Chairmen have dealt with this matter quite worthily, that I here is not any need for me to traverse this field, except to out that taxation reductions, particularly affecting large isations, will have a most beneficial effect on the general my, because it will enable additional reserves to be built up, of which will be re-invested in the business of the Companies ned, thereby providing a nucleus for further development.

e other matter of considerable importance is the decision of rbitration Court to eliminate cost-of-living adjustments. The to which these cost-of-living adjustments have developed he past few years, together with the burden of numerous ys, the forty-hour week, expensive ship-loading charges and freights, have been a very material factor in increasing Aus- n costs of production. Local costs are being raised to such ent that Australia is finding itself priced out of many of portable commodities to overseas markets, and unless that trend is remedied, Australia can only expect a business recession and lower standards of living in the future should more markets be lost. We cannot live at a high standard "on the sheep's back" alone. The Bill for long service leave now before the Victorian Parliament, with its proposed retrospective operation will, if passed, add a considerable further burden to industry.

Already the export trade of primary produce is severely suffering on this account, and many of our primary products are being priced out of the British market, particularly butter, eggs, milk and certain lines of poultry and cheese. Whilst these facts must, of course, have an effect on cold storage turnover generally, this Company is particularly fortunate that so large a proportion of its revenue comes from local storage, and with the increase in Australian population this local demand must continue.

In England at the present time, every effort is being made to eliminate the Socialistic idea of common buying through the British Ministry of Food. Export trade in turkeys from Australia has practically ceased as the best English offers are about 3/9 per lb. Australian, whereas buyers for the local market are offering in excess of 5/- per lb.

Export produce so far released from Government control comprises rabbits, hares, poultry, canned meats, eggs, certain lines of cheese, hams and bacon, but some of these lines do not affect our stores particularly.

(Continued on next page)

METROPOLITAN INDUSTRIES LTD. (Contd.)—

An endeavour is being made to return to a "trader-to-trader" basis in export meat after the middle of next year, but to protect the English producer this may be further delayed.

Australian pork is reputed to be the dearest in the world. This is because milk factories are drying, for export, all skim milk (which shortens the pig food supply), and also on account of this high price of grain which producers must use to "harden" the pork and fit it for consumption.

To indicate the seriousness of our cost structure, recent shipments of eggs arriving in London found the market flooded with stocks from the Continent, and which were being afforded on the London market at least 7d. per dozen cheaper than Australian eggs.

Latterly, the best price at which lamb could be purchased at Newmarket would be about 23d. per lb., but the price offering by British Ministry of Food is only about 21d. per lb. The export lamb trade requires to purchase at 16d.-17d. per lb. in order to operate profitably, and to be able to sell at a price at which the overseas consumer will purchase.

The position of mutton is very similar, and although large quantities are expected, it is doubtful whether there will be sufficient volume offering of the required quality to command an export market, and again meat operators will probably have to rely upon cold storage in order to hold an excess for local consumption.

All this goes to indicate that primary producers, as well as secondary manufacturers relying on export trade, will find overseas markets extremely difficult to hold, unless we can achieve considerably greater production for the amount of wages cost at present being incurred.

New Quick-Freeze Tunnels

This Company is doing all it can to assist the meat operators and the new quick-freeze tunnels, which are now reaching completion, will be of some assistance in this regard, because they reduce the shrinkage loss of meat in the carcase, which happens through a percentage of the fluids being "dried out" in the process of freezing. In fine, the shorter the freezing period the less the wastage, and quick freezing at temperatures of −30°F. is the best and most economical method of handling all meats whether carcase or otherwise.

All that remains now is the completion of certain items of machinery and these tunnels will be operative. The cold storage rooms in the new building have been completed and are now revenue earning.

Indicative of this is the increase in fixed assets from £490,320 in 1952 to £595,252 in 1953.

Ice Department

With the geographical spread of the metropolitan area, there has been a considerable variation in the density of the population, which hitherto had been confined to the inner areas, and as a consequence of such there has been a movement in the ice trade which has resulted in greater emphasis being laid upon plants situated away from the centre of the city. This has resulted in a somewhat uneconomic distribution of facilities; some plants operating at over capacity and others at well below capacity. As part of a readjustment of these anomalies your Directors saw fit to dispose of the franchise for some of its ice business to a Footscray works, and to acquire some other business from a Fitzroy works. The net result of these transactions was a capital profit of £8,087 which, as you will see from the Director's Report prefacing the Balance Sheet, is included in the amount transferred to General Reserve. These reserves, including the balance standing to the credit of Profit and Loss Appropriation Account, now amount to £180,210, an increase of £20,853 over last year's figures.

Manufacturing Activities

During the last twelve months a substantial re-organisati has been in progress in the refrigerator division in order to ensu the marketing of a quality refrigerator at a really competitive pri and also to ensure that a full programme of development a planning for the future was properly and adequately conducte The refrigerator market, as you will have seen from the vario advertisements appearing in the local press, is now at a high competitive stage and your Directors have been most anxious ensure that this Company maintains its place in the competiti drive for a share of the existing market.

This was one of the objects of my visit overseas, and as result of which, I am happy to announce that satisfactory arrang ments have been made with overseas suppliers for our overse requirements of whatever essentials we desire to import. Nat rally, we are not losing sight of the local suppliers for such r quirements, and between these two courses, your Board looks fo ward with every confidence in the future.

This year three new models, namely 5½ c.ft., 7 c.ft. and 8 c.f refrigerators have been placed on the market under the now wel known and highly regarded name of "Metro-Frige," and have merit such support from the trade that our problem for this seas is not so much one of sales, as one of production. Present indic tions are that we are in a fortunate position of being able to se the whole of our production, at least until the end of the curre season.

During last winter a preliminary batch of room conditione (combination of heater for the winter and fan for the summe was placed on the market and this line will be further develop by our Developmental Department in order to capture a larg share of this market during the 1954 winter season.

On my recent visit abroad, I also had the privilege of maki certain contacts in the U.S.A., which naturally it would not advisable for me to disclose at the moment, but which have their object the further development of the Company's manufa turing activities.

Transport Department

Our transport fleet, particularly the insulated transport sectio has continued to render the very greatest of service in the handli of export produce not only for this Company but also for outsi clients. Modernisation has taken place during the year both the development of bogey type chasses and in the building, in o own workshops, of further insulated boxes.

General

In accordance with usual practice, your Directors have made a necessary and proper provision in the Accounts, and have ma every endeavour to ensure that shareholders' funds are used to t best advantage. As a result of this you will notice that curre assets—mainly stocks on hand and debtors—fell from £279,2 in 1952 to £238,427 in 1953.

This release of cash, together with the increase in the Ba Overdraft, have, of course, been re-invested in the Fixed Assets which I have already referred.

You will notice the increase in Balance Sheet values of fre hold properties and buildings which have risen by £82,053, a plant and machinery which has also risen by £29,318, making grand total of these items of £111,371. Expenses of manageme etc., has shown a substantial decrease.

I look forward with confidence to the successful continuance the Company's operations.

The General Manager, the senior executives and the staff a employees generally, have given excellent service during the pa year and have co-operated enthusiastically in the work of t Company. To them I desire to extend our commendation a thanks for their loyalty and energy.

In addressing shareholders at the Annual Meeting held on Oc- r 30, the Acting Chairman, Mr. F. P. Derham, made the follow- remarks:

The Balance Sheet discloses that the Company made a net rit of £51,010 as compared with £60,240 for the previous year, hving a decrease of £9,230.

Trading Conditions

In the course of the Chairman's address in October last year hareholders were informed that in the latter part of the period nd June 30, 1952, our business, in common with many others, a been adversely affected by import restrictions and the general ession in trade. Early in the financial year trading began to ow marked improvement, but, as stated above, the financial re- ts to June, 1953, did not reflect the increased turnover. This in profits was brought about chiefly by our inability to halt rise in costs. Under the circumstances, therefore, the Directors that the result of the year's operations has been satisfactory. ar as one can judge at the present time, there now appears to ome prospect of attaining a stabilisation in cost of operation.

Our management has been active in increasing our volume of siness, and during the year we availed ourselves of the oppor- ity to purchase two carrying businesses. Although they are large we are able, by the spreading of overhead, to co-ordinate advantage the operations of these two concerns.

Properties

The reconstruction of our properties for the Armoured Car roll and Cash Deposit Service has been proceeded with and the mises in Adelaide, Brisbane, Melbourne, Sydney and Geelong been completed and occupied. In each case we are pleased the new premises and it is anticipated that our operations proceed more smoothly, and our employees will work under favourable conditions. The completion of this extensive illing programme has involved the outlay of a considerable sum, ou will see by the Balance Sheet, but the expenditure will, I sure, prove to be fully justified.

have referred previously to the congestion at our Head Depot outh Melbourne, caused, not only by the increase in the num- r of our fleet, but also by the larger units in use. The ten- y nowadays is to employ semi-trailers for economical loading. We have made substantial additions to our bulk-liquid tanker fleet. The volume of work undertaken by this tanker fleet has been considerable and now forms an important section of our business.

In order to provide for the housing of many of our vehicles which operate in the western area of the city and around the docks, we have obtained a lease, from the Lands Department of a large area in Dynon Road, West Melbourne. It is anticipated that we will occupy this site very shortly and our garage problems will be materially relieved.

Our engineering and servicing section at Cheltenham was enlarged during the year and has facilitated both the construction and maintenance of units of our fleet.

The two-way radio-telephone installation to some of our vehicles was brought into operation and has enabled us to give immediate attention to customers' requirements.

Railway Business

As you will possibly have noticed in the press, the Victorian Railways Department has introduced a fast Interstate Service. As a result of a very definite improvement in deliveries, considerable business has been diverted to this channel, and we have received our share of the traffic.

Parking

I am pleased to be able to record that, after years of dilly-dallying, legislation has been enacted to enforce owner onus. As a consequence, carriers have experienced substantial improvements in city parking conditions. However, the restrictions in the city proper have created congestion on the outer fringe of the city and in certain adjoining areas such as South Melbourne, East Melbourne, Carlton, etc., which, to some extent nullifies the benefits of the owner-onus legislation. Nevertheless, the nett result is that the carrying firms can deliver and pick up with greater ease than for some years past.

Conclusion

Summing up, I would say that the past year has presented many problems to the Transport Industry, but, provided there be no adverse change in economic conditions, your Board is of the opinion that our operations for the current financial year should show a satisfactory result. The relief from onerous taxation which has been accorded to Companies and individuals in the recent Budget will help to restore confidence and initiative.

Business Recovery Improves Profit Outlook

Need for Surplus Income

"The recovery from the business setbacks of last year has improved the outlook for earning profits," said Mr. H. D Giddy, Chairman of The National Bank of A/asia Ltd., at the Annual Meeting of shareholders held in Melbourne on Wed nesday, 25th November. "It is of extreme importance to the community's economic health that the capacity of busines to carry on at a profit should always be maintained."

Continuing, Mr. Giddy said:

For the individual man or woman the stimulus afforded by having some surplus income over and above that spent upon current living expenses is invaluable. He, or she, must rely upon this surplus to build up monetary savings and to acquire the necessary, or pleasant, capital assets which add to the standard of life.

Similarly, for the business enterprise the prospect of a surplus is vital. The ploughing back of surpluses into the business is one of the best and least costly methods of safely financing growth or preparing for adversity. Good profit prospects are also essential for the venturing of capital into new kinds of activity which, in turn, contribute so much to progress in the material standard of living.

PROFITS BENEFIT MANY

Profits and profitability have taken on a new meaning with the spread of the ownership of business and industry through all sections of the community. In our country, profits are not the concern of a privileged few and, taken broadly are relatively low; the diffusion of ownership, so greatly accelerated since last century, has brought the profits of even the largest of our business corporations into a very large number of homes.

Some hundreds of thousands of Australians now share the ownership of our public companies in business and industrial enterprise. Through investments of life insurance, superannuation and provident funds, many more have a direct or indirect interest in the profits of our greater public companies.

THE COMPOSITE BUSINESS SYSTEM OF TODAY

The Chairman said that this spread of ownership, together with the growth of Government enterprise and economic supervision, is factual evidence of the changes that have taken place in our business structure.

Government finance and expenditure have become vital factors in business activity. The material tax reductions, both individual and corporate, of the 1953/54 Federal Budget should provide an additional stimulus. Some use of central bank credit during this financial year may be necessary, but excessive resort to this tempting spur could be quite disastrous in present circumstances. Administered with care to bring into production unused resources and to support money incomes, it may be of real benefit to the community. If extra real wealth from additional production does not eventuate, the value of the higher incomes will prove illusory, as it will be dissipated by the advent of inflationary cost and price increases.

BANKING POSITION BETTER

The present banking position has a different complexion from that of a year ago. The fiscal year 1951/52 ended with a balance of payments deficit of £A585 millions, and in consequence over the twelve months to September, 1952, the main Trading Banks had to meet an outflow of well over £200 millions of liquid funds to support industry through that difficult period.

By contrast, the 1952/53 balance of payments showed an extremely valuable surplus of £A171 millions, resulting in the main Trading Banks enjoying an inflow of funds of about £A188 millions for the twelve months to September last.

This change for the better in our external position and the enlightened monetary policy of the Federal Government have been primarily responsible for restoring the liquidity of the Banking System to a reasonable level.

LARGER FOREIGN EXCHANGE RESERVES

The nation's international monetary reserves have been at least partially re-established from the dangerously low level of £A362 millions reached in June, 1952. That was well below the value of one year's imports at even the most stri gent stage of the restrictions, but these reserves had improv to £A548 millions by June this year. They are not undu high, however, and will require careful conservation.

The present outlook for the 1953/54 balance of payme suggests that expenditure may be close to receipts and the may be little to spare for supplementation of our reserv With at least three-quarters of our export income depende upon primary products, encouragement must be offered expand output and to develop overseas markets likely to reasonably firm on a long-term assessment. Freedom fr import restrictions for our growing population will heavily dependent upon expansion of our primary industry a upon its production costs being kept within competitive leve

CAPITAL MARKET RESPONDS

A year ago, the capital market was exhibiting signs tightness, with a shortage of funds for the investment oppo tunities offering. Interest rates rose and many offerings we under-subscribed. The volume of money in the communi fell during 1951/52, but the solid rise of £220 millions betwe June, 1952 and June this year has considerably eased the po tion.

From the peak levels reached in September and Octob last year, the redemptive yield on Commonwealth Bonds h receded slightly, despite the fact that a relatively large volu of funds has been taken from the market. These develo ments may be taken as a good augury for the current financi year, but any return to conditions which could generate feveri activity would be fraught with grave peril.

THE BUSINESS IMPROVEMENT

Mr. Giddy said that material overall improvement in t level of industrial and commercial activity has occurred sin he last addressed shareholders. The more liquid state business generally, following the reduction of excessive stock has buttressed business confidence and brought a return scope for new activity. Stocks could not have been clear without the maintenance, perhaps it was a restoration, market demand which resulted from the support given t national income by the improvement in the overseas balan of payments and by Federal Government monetary polic National income in 1952/53 is officially estimated to have i creased by about 10% in terms of money, to approximate £3,580 millions, a new record.

The business scene at the moment is one of practically fu employment, with its accompaniment of a high market deman There seems no reason to suspect that these conditions wi not continue during 1953/54.

It is of supreme importance that this position should n spill over into one where excessive activity by Governmen and private enterprise again force the home market int excess demand and inflationary pressure. A further, an wholly disastrous, upsurge in costs and prices would then b inescapable.

GOOD YEAR FOR BANK

Net profit for year to 30th September, 1953, was £668,95 an increase of £51,989 on that of last year. Gross earning rose by £661,389 to a record of £7,001,632, but working ex penses and taxation provisions were £609,400 higher. Div dends are raised to equal 8% p.a. on paid-up capital; pre viously 7% p.a. Assets at 30th September totalled £256,849,37 £27,842,146 up on last year.

Liquidity is much improved at 10/3 in the £ of deposit as against 7/9 last year. The Chairman reported that th number of customers had grown to a new record and 30 addi tional offices were opened making the total 681. The Ban has under way an extensive programme to modernise and en large premises. Staff numbered 4,523, comprising 3,237 me and 1,286 women.

National Bank of Australasia Limited

Reg. Office: 271 Collins St., Melb. **'Phone:** C. 7383. **Other Share Registers:** Adelaide, Brisbane, Perth, Sydney, London. **Directors:** H. D. Giddy (Chairman), J. A. Forrest (Vice-Chairman), F. E. Loxton (Deputy Chairman), Hon. Sir Frank G. Clarke, K.B.E., M.L.C., G. J. Coles, C.B.E., Leonard Darling, D. S. Forbes, Sir Clive McPherson, C.B.E., D. York Syme. **Chief Manager:** G. C. Hill. **Auditors:** J. R. Bishop; S. R. Warnock.

Year ended September 30, 1953. Meeting November 25, 1953.

The expansion of £639,000 in gross earnings was accompanied by an increase of only £15,000 in the net figure of the Bank and its subsidiary, due to higher expenses. Dividend was raised by 1% to 8%.

*Profits include those of the Queensland National Bank, which was absorbed in 1948.

†In 1953, credited with £500,000 mainly from distribution of surplus assets of Queensland National Bank Ltd.

Seven new branches and twenty-three new receiving offices were opened in Australia, bringing the total to 678 at balance date.

The Special Deposit Account with the Commonwealth Bank rose by £10.8 million during the year, as compared with last year's fall of £60.6 million. Holdings of Treasury Bills rose by £4.5 million and Government securities by £19.2 million.

Deposits, Bills Payable and Other Liabilities rose by £29.2 million.

Much of the reduction of £10.4 million in advances occurred in the industrial and trading section following repayment of abnormal accommodation granted during 1951-52.

Liquid assets at balance date were £116.4 million, or 10/3 in the £1 of deposits, as compared with 7/9 a year ago.

*P. & L. deficiency of £12,667 in subsidiary; debited with £639 loss on sale of assets.

At Alexandria (N.S.W.) the company operates Australia's only Antimony Smelter and one of Australia's two primary tin smelters.

It is also sole Australian manufacturer of antimony oxide and tin oxide, as well as largest manufacturer of white metals (type metals, bearing metals, solders, etc.). Copper base alloys and raw materials for the ceramic and paint industries are produced, and the company deals in tungsten and other ores, various machinery and merchandise items and industrial diamonds.

In April, 1953, most non-ferrous metals were removed from price control and prevailing prices are lower than at that time.

A subsidiary mining company has developed an antimony mine at Point Lookout (N.S.W.), from which a quantity of ore was produced. A new mill is due to operate in November. No credit has been taken in the accounts for two years' ore production now lying at grass.

The Chairman, Mr. O. T. Lempriere, addressed the Annual Meeting held on October 27, as follows:

As shown in the Annual Report and Accounts, which have already been circulated to shareholders, the profits for the year ended June 30 last were slightly less than those of the preceding period. Having regard to the conditions existing during the period this result is considered by your Directors as most satisfactory. In the first half of the year trading conditions were particularly difficult but it is pleasing to report there was an increased demand for the Company's products during the second half of the period. This increased demand has carried through into the current year and is still continuing.

Improved Liquid Position

The most satisfactory feature of last year's results is the improvement in the liquid position of your Company. The benefit of £100,000 additional funds, raised during the period by the issue of 6% convertible deposit notes, contributed to this position but, at the same time your Directors are most gratified it was also possible to reduce the overall total of stocks and stores on hand. The continued increase in sales in the second half of the financial year also reduced the ratio of stocks on hand to turnover.

Lifting of Price Control

In April last most non-ferrous metals and alloys were removed from the list of items subject to Price Control regulations. This has meant that for the first time for more than thirteen years prices of the metals and alloys produced by your Company fluctuate in accordance with world markets. The change over from the fixed artificial prices to a free market occurred at a time when most metal prices were falling sharply and, in consequence, selling prices for metals and alloys are now substantially lower than was the position under Price Control. It is most pleasing for your Directors to be able to advise that it was possible for the Company to adapt itself to the new conditions without great difficulty.

As advised in the Annual Report a new mill has been erected by Point Lookout Antimony Mines Pty. Ltd., together with a haulage line from the mine to the site of the new mill. All of this work has been completed and it will now be possible to resume full scale operations at the mine and the mill. It is anticipated that during the remainder of this current financial year the mine will provide a valuable source of supply of antimony concentrates for the parent Company.

Future Prospects

Returning to the affairs of the Company as a whole, it is encouraging to be able to report that trading activities since the balance sheet date have been well maintained and your Directors view the prospects of the current year with confidence.

Staff

In concluding it is once again my pleasure to record your Directors appreciation of the competent and efficient manner in which the executives and staff have carried out their duties during the past year.

Peters Ice Cream (Vic.) Limited

eg. Office: 171 Burnley St., Richmond. **'Phone:** JB 4221. **Directors:** E. Christensen (Chairman), G. I. Purbrick, S. W. Byrne, F. R. Dawborn, J. S. Shaw, W. V. Armstrong. **Auditors:** Rucker, Mackenzie and Gordon.

24th Year ended June 30, 1953. Meeting October 27, 1953.

Sales volume was a record and profit was almost doubled : £60,275, permitting dividends to be raised by 2% to 12%, fter last year's reduction of 5%.

At the Annual Meeting of the Company held on October 27, s Chairman, Mr. E. Christensen, delivered the following address:

The Balance Sheet for our financial year ended June 30, 1953, vers a period during which the Company established its record t nover in sales value. Gallonage output was down in comparison th our previous record year.

High Sales Tax

Undoubtedly sales tax at the rate of 20%, which was imposed ht through the year under review, forced us to sell at a price t did have a dampening effect on sales. We did anticipate t the last Budget would have provided, if not for the total emination of sales tax on ice cream, a considerable reduction, t unfortunately sales tax was reduced only 3⅓%, from 20% to present ruling rate of 16⅔%. It is incomprehensible to us that Federal Government should bracket a health-giving and valu- le milk food product, such as ice cream with certain other manu- tured products in the same sales tax category.

It is even more surprising that ice cream should be forced to ry this high sales tax in view of our business being an integral t of the dairying industry, especially now when overseas markets all our milk products are fast weakening as a direct result Australia's high production costs. It is believed that every ouragement should now rightly be given to the ice cream in- stry, so well established here, to use more milk products and is fill a vital breach. With sales tax removed from ice cream s would automatically accrue through greater sales at lower ces.

During the year we extended our distribution facilities and lked up with more new Peters Ice Cream Retailers than in any vious similar period.

Whilst some manufacturers may be considering the use of getable fat at cheaper prices than milk and/or butterfat in the nufacture of ice cream—if some have not already commenced use—we are determined to continue as always, using the hest and purest milk products obtainable for our manufacturing ds. With our very large turnover, in conjunction with increased duction efficiency, we believe we can soften the effect of the sent high milk product prices, and at the same time continue provide the public with the quality ice cream food product they accustomed to receive from us.

Dairying Industry

A profit has also been derived from our subsidiary, The Trafalgar lk Supply Pty. Ltd., in which, as well as the dairying industry a whole, we have a large stake, and to which therefore we main loyal.

We do commend, however, for the consideration of the Dairying Industry's various Associations, the possible effect of the continued high incidence of sales tax on ice cream.

This can only mean an increase in the use of substitute fats by some manufacturers. It is a problem, admittedly, of perhaps lesser degree but ranking alongside those of milk product export difficulties and the use of margarine on the Australian market.

Our first-hand information indicates that certain American States have entirely banned the use of substitute fats in the manufacture of ice cream and kindred products.

During the year we sent abroad our Production Superintendent, Mr. G. R. Hook, B.Sc., and from his extended visit to England, the Continent and America, we have been enabled to keep closely in touch with overseas developments in our industry. We have acquired various new plant items which can only enhance manufacturing efficiency upon their installation,

Accounts

The Balance Sheet figures will prove self-explanatory, but it is pleasing to indicate that we have set aside the further amount of £45,134 out of the year's profits as provision for depreciation, resulting in a total of £423,493 against an original cost of £727,481; the further transfer of £25,000 to General Reserve, as recommended by your Directors, now means that our General Reserve, Building Provision and Unappropriated Profits total £291,445.

The Company today operates one hundred and twenty-two motor vehicles, entirely engaged in the ice cream and milk business. The operation and maintenance of this fleet of motor vehicles alone, in view of the mileage involved, calls for close and efficient supervision and exacting control, which is exercised.

Staff

Our key staff members have now been with us for many years and are thoroughly experienced in those particular sections of our organization in which their willing services are given to the Company. We wish to place on record our appreciation of the Staff's value to the Company and in this connection it is pleasing to say that all again received a bonus payment out of the year's profits, as well as the benefit of the Company's contribution towards the Peters Superannuation Fund, the total assurance cover of which now aggregates £340,000.

We retain confidence in the future of the Company and its ability to obtain an increasing share of the business offering in a territory of growing population. We highly value the goodwill existing between the Public and Distributors alike with our Company, which has been even more pronounced in the trading year just closed.

Pelaco Limited

Makers of Shirts, Collars, Pyjamas, &c.

Reg. Office: 23 Goodwood St., Richmond, Vic. **'Phone:** JB 2151. **Directors:** J. L. G. Law (Chairman), H. F. Journeaux, E. H. Clark, K. S. Elliott (Manag. Director), E. T. Bazeley. **Auditors:** A. C. Moore & Sons.

Year ended June 30, 1953. Meeting November 5, 1953.

Turnover fell by 18%, and textile prices fell sharply, causing profit to recede to £8,601. Preference dividends were continued, but the balance remaining was insufficient to pay an ordinary dividend.

At the Annual Meeting of the company held on November 5 the Chairman (Mr. J. L. G. Law) delivered the following address:—

The trading year under review has proved disappointing. This time last year the opinion was held by your Directors that the heavy stocks on hand would prove to be a valuable asset as import restrictions had been introduced.

Fall in Prices

Trade took much longer to revive than was anticipated, while at the same time world prices for textiles fell sharply and it was not until approximately Christmas, 1952, that things began to look up in the shirt business.

This, however, was too late to materially affect the year's trade, with the result that our turnover was 18 per cent. lower than the previous 12 months.

It became your Board's chief aim to liquidate the stocks on hand, and to absorb the materials on firm order (at prices which were by this time above world parity) and it is satisfactory to be able to report that delivery of all high-priced materials on order has been made, and these materials have been converted into garments, and these garments have been sold without incurring any capital loss.

Liquid Position

A great improvement has been made in your company's accounts, which now show a satisfactory liquid position.

Stocks on hand, and goods afloat or in transit show a decrease of £1,149,893 as compared with last year.

Reserves have been increased by £2,019 and now stand at £248,560.

Current assets at £1,331,862 show a surplus over current liabilities of £449,803.

Overdraft Down

Bank overdraft has been reduced by £545,769 to £413,841, and at the end of October, stands at £254,531, a very decided improvement.

Dividends on A and B preference shares have been paid on their due date.

Ordinary shareholders, of course, will be disappointed because an ordinary dividend has not been declared, but your Directors could not, under the circumstances, feel justified in recommending the payment of one.

Improved Trade

It will, I feel sure, be pleasing for shareholders to learn there has been an improvement in trade, and that the demand for your company's products is so great that our output until next March is already bespoken, and provided world conditions do not deteriorate, and world markets remain constant, this present trading year should prove to be a satisfactory one.

The Chairman, Mr. R. G. Ball, delivered the following address he Annual Meeting held on November 19:—

Gross earnings for the year, by way of commissions, amounted 68,199 compared with £66,103 in the previous twelve months; me from general investments, including net rents received for e let in the Company's Queen Street building, amounted to 7. Total income, therefore, was £73,636—an improvement of 4. On the other hand, working expenses for the year (includ- provision for income tax) were slightly higher and amounted 6,998. Net profit, after tax, was £6,638. From this, Directors transferred £500 to the Officers' Benefit Fund and £500 to ral Reserve, and are recommending payment of a final dividend %, making a distribution to shareholders of 10% for the year.

Having regard to the statutory limitation upon the charges the pany can make for the services it provides, Directors regard results of last year as satisfactory. The amount of new busi- entrusted to the Company in its fiduciary capacity, in the way states and settlements during the year, has never been ex- ed previously. The aggregate of assets under administration been steadily increasing for some years, and now stands at a d level. Every effort consistent with the maintenance of effi- y has been made to keep down the cost of carrying on the pany's business. The principal item in this cost is, of course, laary bill, and the automatic cost of living adjustment to award ies has added to it greatly in recent years. The whole com- ty desires stability in the relationship of wages and costs of g. The recent decision of the Arbitration Court to suspend quarterly automatic cost of living adjustments may well do towards bringing that stability about. It is to be hoped, fore, that there will be no hasty legislative interference with Court's decision.

Some expenditure has been incurred recently in improving the furnishings and fixtures, as evidenced by the increase in asset "Furniture and Fittings" in the Balance Sheet. Greater ency, at reduced cost, has been introduced in our Accounts rtment by increased mechanization. Further gains in effi- y in office organization on the same lines and some overall provement in office furnishings are contemplated.

Reserves

t has been the policy of your Board, in the interests not only areholders but of the Company's clients, to build up reserves; n are invested in the Company's freehold building in Queen t, and in fixed interest bearing securities. The Balance Sheet e you shows that Shareholders' Funds amount to £137,855, which s that every pound of shareholders' capital is represented by assets to the value of £2/15/2. You will agree that the Company is in a gratifyingly sound financial position. The income from investments, after deduction of annual charges and other expenses in connection with the building, amounted to £5,437—a return of about 4½%. This income includes rent for the space in the building occupied by the Company itself, but the amount of rent thus credited is, of course, only a book entry. Your Directors believe that the Company's power to invest its own funds—at present, in common with other Trustee Companies, restricted by Statute to fixed interest bearing securities—could safely be enlarged in a way which, without impairing security, would show a better return to shareholders.

Trustees' Scale of Charges

The competent and conscientious discharge of the fiduciary function—whether it be as Executor, Trustee or Attorney—calls for absolute integrity and experience, knowledge and skill of a high order. The corporate trustee—which cannot die or become ill or go away—is better equipped than most private individuals to carry out this function. It has always been the policy of your Company, in addition, to bring to the administration of Trusts and Estates, a lively and continuing personal interest in the welfare of the beneficiaries, particularly when they are infants or women inexperienced in business affairs. The net profit to the Company for providing these valuable services is very modest indeed—in fact, too modest in relation to the rewards for other professional and mercantile services in our community. The charges which the Company can make for the services it provides are regulated by Statute, and the statutory limitation has remained unaltered, despite changing conditions, for upwards of sixty years. I am happy to be able to tell you that this Parliamentary Session the Government introduced a measure designed to liberalize Trustee Company charges to a moderate extent. If the measure becomes law, as is anticipated, some relief will be afforded to Trustee companies in the future.

Directors and Staff

During the year, the Company lost the services of two of its Directors. Sir Dalziel Kelly died in February and Mr. George Shaw, who had been a member of the Board for 26 years, died in June. Both Mr. Shaw and Sir Dalziel Kelly contributed much to the Company's well being, and they will be greatly missed. Vacancies on the Board have been filled by the appointments of Mr. Wilfred Deakin Brookes, D.S.O., Mr. William Dunstan, V.C., and Mr. P. F. G. Gordon. The Company is fortunate in having secured their services. Each has won a distinguished position in the world of affairs, and is admirably qualified to further the best interests of the Company and its clients.

The Board is appreciative of the contribution made by the Company's Executives and Staff to its continued success, and thanks them for their loyalty and zeal.

In addressing shareholders at the Annual Meeting held on October 22, the Chairman, Mr. A. D. Wenzel, made the following remarks:—

You have already received a copy of the Statement of Accounts and Balance Sheet for the year ended June 30, 1953, giving you the Company's position at that date, and disclosing the profit for the year under review, and your Board feels that the following comments should be made on them.

The net profit of £7,310 is £4,239 below the previous year. This is due to a reduced turnover during that year resulting from more cautious buying by the retail trade, who were still disposing of their surplus stock of raincoats.

However, the Company's stocks were considerably reduced and the bank overdraft of £13,067 at June 30, 1952, was converted into a credit balance of £4,881 at the balancing date, and we are glad to report that the Company's position is liquid.

Future

In regard to future prospects there is business to be done by those who can produce the goods required by the trade as to both type and price, and we have to report that everything has been done to reduce operating costs and effect economies. The new season's range has been produced, and one or two changes have been made in interstate selling representation, and it is felt that the products of the Company will command a satisfactory market during the present year.

Directorate

It is with regret that I have to announce the death during the year of Mr. S. Ciddor. He was the Founder of the Company, the General Manager and a Director, and his loss is felt by everybody who knew him.

His seat on the Board has been filled by his son, Mr. Eric Ciddor, who has been with the Company for some 14 years. Mr. Eric Ciddor, in accordance with the Articles of Association of the Company, comes up for re-election at this meeting. Your Board, knowing Mr. Eric Ciddor as they do, has no hesitation in recommending his re-election.

In conclusion, I wish to express to the Executive and Staff the appreciation of the Board for the work they have done during the year.

Rocke, Tompsitt & Co. Ltd.

Wholesale and Manufacturing Chemists and Druggists

Reg. Office: 292 Flinders St., Melb. **'Phone:** MU 7551. **Directors:** F. P. Derham, C.B., D.S.O., V.D. (Chairman), S. J. A. Fripp (Manag. Director), L. Fripp, A. B. Murie. **Auditors:** Wootton Sons & Elvish.

33rd Year ended June 30, 1953. Meeting December 14, 1953.

Profit was £1,392 higher at £17,313, and dividend was again 8-1/3%.

---

he Chairman, Mr. L. T. Crouch, delivered the following address ie Annual Meeting on October 15:—

efore reviewing the trading during the past year of R. B. es Pty. Limited, and the various other subsidiaries connected the Company (to which I shall hereafter refer as "the Com- ") I would like to refer to the sudden and somewhat tragic h of our late Managing Director, Mr. R. B. Davies. Until mber, 1952, he was (or appeared to be) in the best of health, on February 22 last he passed away, leaving a record of evement which few Australian business men have surpassed. progress of the Company, of which he was the founder, is, will, I hope, always remain, a monument to his dynamic per- lity and foresight. Until about 1929 no manufacturing was ed on by the Company; then in that year a factory was ac- ed in Albion Lane, Annandale, and in about 1935 the Company ed to its present site. During the war the annexe established he Company (largely through Mr. Davies' efforts) for the ufacture of Mills Bombs, Fuses and Anti Tank Grenades, etc., of important national service. I am sure that the share- ers will like to join with me in expressing the sympathy of meeting with his widow and children.

Mr. Davies' death necessarily involved important changes on the d. Mr. William Wills who has been associated with the Com- as Works Manager since its inception, and also for many s as one of its Directors, was made Managing Director. The d is confident that he will emulate the achievements of his ecessor. Mr. Ross Davies, Jnr., was made a Director and placed harge of the Sales Department. The Board was fortunate gh to secure the services (as additional Director) of Mr. Ray- Moore, a partner of Smith Johnson & Co., and a Director any important Companies in this City. His assistance will, el sure, help us to steer clear of and meet many difficulties h naturally arise in dealing with new problems.

Buyers' Market

nd, strange as it may seem, the problems with which the pany is faced are to a certain extent "new." Since 1939 the ralian market has been essentially a seller's market; it was ssible until the latter end of 1951 to meet the demand for the pany's manufactures nor was its complete range ever avail- Since that date the market has changed to a buyers' market now the emphasis is on sales.

dvantage was taken of the easing in demand to build up ts to cover practically the whole of the Company's range of manufactures. For the first time in the Company's history de- livery of almost any one of the thousand odd lines which it manu- factures is available ex stock. This has had considerable effect on sales as well as the goodwill the Company enjoys.

Turnover

I am glad to say that though in the transitional period the Company's turnover suffered materially, sales appear now to be definitely on the upgrade. Moreover, sales of Schlage locks, L.C.N. Door Closers and Grand Rapids Invisible Sash Balances in which we are associated with American friends, illustrate the excellence of these manufactures, while quality in other lines is telling its tale; and the Company hopes to be able to continue to compete successfully with imported as well as local products.

At the same time it must not be overlooked that prices of raw materials have been rising steeply during the year. The lowering of Company income tax and stabilisation of wages by cutting out quarterly adjustments should, however, have a steadying effect.

"Yorkshire Fittings"

During the year the Company, in conjunction with Yorkshire Copper Works Limited, commenced the manufacture of "Yorkshire Fittings" and a factory for this purpose has been fully established and equipped. Yorkshire Fittings (Australia) Pty. Limited have now, or very shortly will have, a full range of fittings for sale, and it is hoped that this line, which saves a great amount of labour, and also uses far less copper or brass than old methods of manufacture will have a ready sale and an important effect on the Company's and the national economy.

Shareholders will observe in the consolidated Balance Sheet an item of £12,500 carried to the account of Capital Reserve. This represents an allowance to R. B. Davies Pty. Limited of that amount in respect of their loss of the Agency for Yorkshire Copper Works, which they had held for many years.

The Company's plant and machinery have been well maintained throughout the year.

Staff

Your Directors desire to acknowledge thankfully the loyal assist- ance of its Staff, and the excellent work done by its employees.

The Board expects that for some time to come its efforts will be concentrated in consolidation of the Company's position rather than in new undertakings involving the expenditure of any con- siderable amount of capital thereon.

The following comments by the Acting Chairman, Mr. J. G. Donaldson, were circulated to shareholders with the Annual Accounts:—

The net profit for the year was £51,215, after providing £2,301 for depreciation. Provision for Income Tax of £17,675 (at new rates) has been made, which it is estimated will be sufficient to meet the Company's liability, and there then remains £33,540 available for appropriation. To this amount has been added £19,454 remaining from profits of previous years.

The full amount available for appropriation was £52,994, out of which the Directors have declared dividends as set out hereunder amounting to £9,823, and have transferred £20,000 to Dividend Equalization Reserve, leaving £23,171 to be carried forward:

Preference dividends	£800
Ordinary dividends—	
(1) Interim dividend at 6¼% on 240,000 stock units of 5/- each	4,296
(2) Final dividend at 6¼% on 302,500 stock units of 5/- each (making 12½% for the year)	4,727
	£9,823

You are asked to confirm the payment of the above dividends.

Bonus Issue

During 1952 additional capital was raised for building extension and expansion of plant. This has been completed and the funds are earning profit at a rate comparable with the total capital investment. Your Directors therefore decided to return to stockholders in the form of a bonus issue the premium on the issue then made.

Capital Issues consent was obtained and a bonus issue of 1 stock unit for each ten stock units held was made. Notwithstanding the fact that the issue was made after the end of the financial year, your Directors decided to pay the final dividend on all issued shares, including the bonus issue.

Dividend Equalisation Reserve

In order to preserve the sound financial position of your company and to maintain its record of advancement and progress, a large portion of our earnings must be retained in the business. In fact, such retained earnings become a part of the permanent capital of the company.

However, whilst this is so, your Directors realise the desirability of ensuring stability and continuity of dividends to stockholders at a rate not less than that at present paid, and in order to protect this rate they have this year transferred £20,000 or approximately two years' dividends at the current rate to dividend equalisation reserve.

Death of Director

It is with regret that we record the passing of Mr. Albert Go one of the original Directors of this Company. We desire to p on record our appreciation of his advice and assistance over m years and to extend to members of his family our most sinc sympathy.

Staff

Once again it is the privilege of the Board of Directors to press its appreciation to all the men and women of the R.V organisation for the splendid way in which they have measu up to the increasing responsibilities which have enabled the gro and expansion of the business.

Results of the Company's trading operations have not, in opinion of the Directors, been affected by any circumstances abnormal character.

The Managing Director, Mr. R. V. Butler, supplemented Acting Chairman's report, as follows:—

We entered this financial year with the knowledge that trad would be affected by financial controls imposed upon the banks, had every confidence that this effect would be only tempor We therefore continued with our plan of building expansion factory improvement. The operative space of the factory is n 35,000 sq. ft., and a further 79,000 sq. ft. is available for fut expansion.

Plans were continued for reorganising the whole of our fact for maximum efficiency, and this re-arrangement is virtually c plete.

A special drive was made to increase our export business, sulting in substantial increases in the volume of overseas sales our products as compared with the previous year. We are f aware that overseas competition in the export field is becom very keen. We have been successful in competing particula in quality and also in price. This has been made possible reason of the fact that our continually increasing efficiency obviated the necessity to increase prices, as have so many ot local manufacturers, and we have fully maintained our competit position. We are making every effort to retain those mark already established, and, if possible, to procure fresh ones.

Sales Increase

We have been rewarded for our long range views and the c tinuance of our development plans for following the slight rec sion in the early months of the year, our sales increased by 6 during the period from November to June. Continual review modification of design has also resulted in the saving of mate and improved labour efficiency. Every possible improvement being given the fullest attention. The new factory layout has c duced to speedier production, and the provision of additional ame ties for the staff has acted as an incentive with regard to grea output per operator.

We are proud to announce that the Company has not raised ices on any of its products since September, 1951, in fact, it has is year reduced prices. This is further confirmation of our ficient planning, which has been greatly assisted by the co-operaon and support of the staff and employees of the Company.

During the last 12 months our Engineering and Research Dertments have been developing many lines which will be added the present large range of products produced by the Company, e benefits of which will accrue in the year 1953-54. Some imrtant lines were ready for release just at the close of this finanal year.

Patents have been taken out covering certain of these lines.

Service

We now have independent service branches operating in all States of Australia, New Zealand and Africa. This has saved expense, and is further strengthening the sales of our products, as well as rendering still greater service to our many customers.

We are confident of the year ahead, and believe that the Company will operate efficiently and continue to expand on to still further new products.

I desire to thank the staff and the employees of the Company for their loyal co-operation and support in expanding this all-Australian company of ours.

Rothfield & Co. Ltd.

Sewing Cotton and Thread Manufacturers.

g. Office: 16 Claremont St., South Yarra, Vic. **'Phone:** BJ 4274. **Directors:** W. N. Rothfield (Chairman and Manag. Director), N. Rothfield, M. Cohen, H. G. Tredinnick (representing pref. shareholders). **Auditors:** Spry, Clark, Tootell & Co.

6th Year ended June 30, 1953. Meeting November 10, 1953.

Sales were a record, due partly to reduced competition from ports. Profit rose by £10,649 to £36,294, and the usual 10% dinary dividend was covered by a further 5% retained in the siness.

The following remarks were made by the Chairman, Mr. W. Rothfield, at the Annual Meeting held on November 10:

The first six months of the year under review were exceedingly icult, due largely to the fact that the users of our products had ll large stocks of materials and clothing from excessive buying ring the previous year. However, as soon as these stocks were uced to reasonable levels and the full benefits of import restricns made themselves felt, trade improved and the manufacturing ivities of the clothing and allied industries became fully extended.

Overall Sales Record

The consequence of this improvement in trading conditions was increased demand for our sewing threads and slide fasteners, I am pleased to tell you that the unit production and overall es for this year were higher than that of any previous year in Company's history. It should be realised, however, that import trictions cannot be regarded as a permanent circumstance of Australian economy, and already substantial relaxations have n made since the restrictions were first imposed.

It is true that there are considerable differences of opinion as whether import restrictions are the most effective means of eting the difficulties of local manufacturers who must compete h overseas products, difficulties which are principally due to high cost structure of Australian industries but it is fair to that if Australian retailers (and manufacturers, too) were in habit of saying proudly to their customers, as indeed they do most other countries, "this article is made in Australia, it is necessary to buy an imported article, our quality is the highest in buying Australian goods you keep your fellow Australians employment," there would remain little to achieve by import trictions. The insistent demand for more production must be ompanied by a clamouring campaign for the slogan "Buy goods de in Australia," because unless local industry receives the support of the consumer, increased production may only add the already too heavy responsibilities of management.

Subsidiaries

I am pleased to tell you that two of the subsidiary companies established last year have materially contributed to the profits of the parent company this year. The weaving mill has overcome the technical difficulties which usually beset a new enterprise. We are now producing good quality fabric at competitive prices and satisfactory orders are in hand for the coming winter season. Your Board looks forward confidently to the further consolidation of this subsidiary, but it must stand watch to see that its endeavours are not undermined by the influx of cheap goods from countries with lower standards of living.

The Anchor Slide Fastener Corporation, too, is now in full production and during the year additional items of plant have been added to ensure that its productive efficiency is of the highest. It is only by constant attention to detail and maintaining the plant at a high pitch of efficiency that we can expect to meet competition from whatever direction it may come, and your Board is confident that the current year will see the continued growth of this subsidiary.

During the year under review your Board decided to acquire a majority interest in John Bowden Plastic Buttons Pty. Ltd., a company formed some two years ago to manufacture plastic buttons for the clothing trade. This subsidiary had specially designed machines, to which we have added other machines built on our own premises. The Board considers that this subsidiary will prove to be a valuable adjunct to the parent Company's business and will enable us to further service our customers' requirements in the clothing trade.

Your Board is highly satisfied with the results of the past year and it considers that the parent Company and its subsidiaries have made substantial gains during this period. So long as Australian manufacturers are granted fair conditions under which to operate, our Company will continue to grow and to further extend its activities and services according to the needs of our still-growing clothing and allied trades.

Ronaldson Bros. & Tippett Limited

Reg. Office: Creswick Rd., Ballarat, Vic. **Directors:** H. J. Tippett (Chairman), R. B. Ronaldson, E. J. T. Tippett, R. A. Rowe. **Auditor:** A. K. Miller.

Year ended June 30, 1953. Meeting October 28, 1953.

Gross profit was lower, but reduced charges for depreciation and taxation resulted in a net profit £9,229 higher at £38,821, returning 16% on capital. Dividend was again 9%.

Petrol, petrol-kerosene, and diesel engines from 2 to 50 h.p., electric lighting plants for farm, home and Government use, fruit-spraying plants, sheep shearing machines, wool presses, sheep jetting plants, dragsaws, and milking machines are the main production lines of this old-established Ballarat business.

Turnover was maintained for the first six months, but later decreased, due to competition from imports and accumulation of dealers' stocks. Tariff protection is discussed in the Chairman's Address herewith.

The Chairman, Mr. H. J. Tippett, delivered the following address at the Annual Meeting on October 28:—

Fifty years ago this business was started through the energy and enterprise of the Ronaldson brothers, Dave and Adam. I joined them shortly afterwards and am proud to be still here to celebrate its golden anniversary.

The progress of the firm during these fifty years has been basically due to the policies of high quality and fair dealing laid down by the original partners, developed by the late J. L. Ronaldson, and carried on by the present executives.

The Year's Trading

Although styled as our sixth general meeting this is merely because we converted to a public company in 1948.

Notwithstanding the tougher business conditions which have prevailed since our previous meeting, the result of our activities for the year has been reasonably satisfactory.

The consolidated accounts show a profit of £62,174, after providing £11,512 for depreciation of fixed assets. Last year's comparative figures were £60,755 and £18,009.

The parent company's profit is £60,282, out of which £23,000 has been set aside for taxation. (Last year the figures were £59,815 profit, less £29,725 taxation.)

The amount available from the year's efforts is £37,282, which your Directors recommend be dealt with as follows:—

1. Interim dividend of 4½% paid last April £10,798
2. A final dividend of 4½% to be paid forthwith .. £10,798
3. To increase surplus and reserve £15,686

Taxation

In my address last year I commented on the repressing effect of the then prevailing rates of taxation. It is gratifying to know that since then the Commonwealth Government has eased the burden somewhat. The reduction in rates has been taken advantage of by us inasmuch that our provision for taxation is based on the reduced rates. This, in conjunction with a decrease in the amount of depreciation on fixed assets, accounts for the increase in net profit in comparison with last year's figures.

Customs Tariff

Since we met at this time last year, the duty on imported engines has been lifted from 12½% to 25% (as compared to 27½% prior to the reduction), but restrictions on imports have been relaxed also, so that we are still seriously handicapped. The rise of 12½% in customs duty does not nearly bridge the gap between the landed cost of English engines and the Australian cost of production.

Since 1946 the hourly wage has increased in Australia by 105%. In the United Kingdom over the same period the increase has been only 33%. This inflationary state of affairs in Australia has had a disastrous effect on our production costs. After allowing for the difference in working hours, annual holidays, sick leave and other conditions, the British workman provides 2,147 hours of work each year, against his Australian counterpart's 1,880 hours. Adjusting the English wage rate to Australian currency, the Australian manufacturer pays out £210 for every £100 which his competitor in the United Kingdom pays for the same amount of skilled labour, and £214 for every £100 his British competitor pays for unskilled labour. No "efficiency in management" can overcome this disability.

Export Trade

In present circumstances we have not a hope of interesting overseas customers—not even at prices well below cost.

New Projects

In spite of all unfavourable economic factors we commenced quantity deliveries in May of the new 3-4 h.p. air-cooled petrol kerosene engines and have now planned the release of a low weight 5-7 h.p. air-cooled petrol/kerosene engine. The 18-24 h.p. four-cylinder "V" type air-cooled Wisconsin engine is fast approaching the assembly stage and will as forecast last year be in regular production before the end of this year.

In my address to you last year I referred to an air blast Sprayer for orchardists or to give it its proper title the Okanagan "Turbo-Mist" Automatic Concentrate Sprayer. We imported some of these machines from Canada for use as prototypes, or as an aid to manufacture. Our own productions are now in process of manufacture. Indications are that there will be a big demand for this labour-saving machine, and, provided no marked recession in the general economic situation develops, we look forward in confidence to an increasing turnover.

Staff

In conclusion, I wish, on behalf of the Board and Shareholders, to pay tribute to the loyalty and co-operation of every member of our Staff and all employees, in making possible the results attained.

The group's main activities fall into two groups—

(i) Production of alums, generally used by the paper nufacturers and textile industries and for water purifica-n. Sales for the first six months showed a reduction, but mand later increased and the full year's result was satis-tory. Construction of the new factory at Brookwood is ceeding and the second stage is well advanced and pro-ction of filter alum from the new factory is scheduled to mmence at the end of February, 1954.

(ii) Filtration and Water Softening Pty. Ltd. designs, nufactures and instals water purification plants. This mpany had a successful year and ample work is in hand for current financial year. New developments are outlined in Chairman's address herewith.

Principally to finance the erection of the Springvale en-neering works for the engineering subsidiary, the company ued 116,875 6% Registered Unsecured Notes of £1 each.

In addressing shareholders at the Annual Meeting held on vember 2, the Chairman, Mr. R. McInnes, reported as follows:

Financial Results.

The net profit of Sulphates Limited and its subsidiary, Filtra-n & Water Softening Pty. Ltd., for the year we are reviewing s £40,405 (last year was £27,204). This result was achieved er providing £10,757 for depreciation (£7,482 last year), and ,750 for income tax at the new Budget rates (£23,279 last year).

The carry forward in Profit and Loss Appropriation Account the consolidated accounts is £28,004 (£13,518 last year).

The net profit of Sulphates Limited, as detailed in the accounts sued to you and including dividends from the Subsidiary Com-y was £30,868 (£25,401 last year).

The above amount has been disbursed as follows:

id as dividends to shareholders of Sulphates Ltd. (paid or recommended)	£24,200
nsferred to General Reserve	2,000
ded to Accumulated Profit and Loss Appropriation Account	4,668
	£30,868

The Chemical Side of the Company.

We have come through a difficult year successfully.

You have been kept so well informed of the progress of this ustry and the changes which, from time to time, have occurred t I can only emphasise some features already reported to you.

It is interesting to note that there has been a steady increase the demand for our chemicals throughout the new financial year, that it looks as if the future prospects in this respect are ght.

Our building reconstruction is progressing satisfactorily. The ond stage of the new Brookwood Factory is well advanced.

Issue of Registered Unsecured Notes.

Today the circular giving full details of the offer of the 116,875 6% registered unsecured notes of £1 each at par is being forwarded to ordinary shareholders. Because of developments in the engineering subsidiary, your Directors have decided to proceed immediately with the erection of the Springvale Engineering works. The issue is being made principally to finance this project.

The Engineering Company.

This Company again had a most successful year, and there is ample work in hand for the current financial year.

Arrangements have been entered into by your company with two top-flight American engineering organisations for the sole manufacturing rights and sale of their equipment in Australia and New Zealand.

One of these is Bulkley, Dunton Processes Inc., of New York City, who have successfully developed and marketed "Colloidair" Trade Waste and Effluent Treatment Equipment. The other is Pacific Flush Tank Co., of Chicago, Illinois, whose Sewerage Treatment Equipment and techniques are amongst the widest known in the world.

Shareholders will appreciate the importance of these arrangements to take their company into fields rapidly developing in Australia and New Zealand.

Alunite (Aust.) Pty. Limited.

The future position of this subsidiary is not clear, but is receiving careful consideration of your Directors.

Staff.

We have been fortunate in having an executive and a staff full of energy and enthusiasm. It has been progressive in its outlook and imbued with a very real responsibility to the Company. Your Directors recognise how material is this spirit in the success of the Company.

The Silverton Tramway Co. Ltd.

Reg. Office: 314 Collins St., Melb. **'Phone:** MU 1234. **Directors:** A. J. Hancock (Chairman), M. S. Moore, H. F. Walsh, L. G. Lanyon. **Auditors:** C. R. B. James; G. Stobie.

58th Year ended June 30, 1953. Meeting September 29, 1953.

Profit was steady at £83,515, prior to reduction of taxation rates, and will now be increased by a further £16,000.

In addressing shareholders at the Annual Meeting held on September 29, the Chairman, Mr. A. J. Hancock, said:

Profit Results

The profit from Tramway operations (before providing for taxation) amounts to £152,247 as compared with £146,520 earned in 1952. Income received from Investments for the year just ended totalled £4,265 and is lower than that received in the previous year (£4,713) by reason of the fact that certain Government Bonds were realised during the 1952 year to provide funds for the purchase of additional plant.

Total profits, before providing for taxation, the small expenses of the Subsidiary Company and adjustments necessary through the sale of assets, are £156,512 for this year as compared with £151,233 in 1952.

Taxation provision of £72,910—£66,313 in 1952—leaves a net profit for the year of £83,507 as compared with the net profit for last year of £84,431.

Provision for taxation was calculated before the delivery of the recent Federal Budget, the terms of which reduced the Company's liability for taxation in respect of profits earned during the year ended June 30, 1953, by approximately £16,000.

Balance Sheet

I am sure that shareholders will agree that the Balance Sheet discloses a most satisfactory financial position. I shall not weary you by reviewing the movements that have occurred in liabilities and assets since the publication of the 1952 Balance Sheet, but I will refer to one asset only:—

Rolling Stock

Shareholders will note that the Company's investment in rolling stock increased from £252,736 in 1952 to £285,565 in 1953. During the year the Company spent a sum of approximately £47,000 on new "O.N." trucks, the final purchase price of which is subject to adjustment when the costs of construction ultimately are determined.

The scrapping during the year of obsolete trucks and locomotives has reduced the net increase in this asset during the year to £32,829.

Plant

I reported to you last year that during that period four locomotives were delivered from England and were operating satisfactorily. These locomotives have continued to give good service, and I am pleased to be able to tell shareholders that when recently our contemporary, the South Australian Railways, encountered engine troubles on the Cockburn-Port Pirie line, we were able to make available two of our engines and thus ensure the maintenance of the traffic between Broken Hill and Port Pirie.

Sales Tax

When the Locomotives were purchased by the Company it was thought that they would not be subject to sales tax. The authorities have now claimed sales tax to the total sum of £17,000. With the agreement of the taxation authorities, payment of this amount has been deferred pending reference of the matter to the High Court for decision as to whether or not the Company it liable for the amount. The case is to come before the High Court shortly. If the decision of the Court is unfavourable to the Company, the cost of the locomotives will be increased accordingly.

General Manager

Last year I informed you that Mr. T. C. Gun, our then General Manager, was to retire on December 31, 1952. This retirement occurred, and the Board has appointed Mr. L. E. Roberts as Manager of the Company's operations in Broken Hill.

Directorate

In May of this year Mr. T. B. Birkbeck, for reasons of health, retired from the Directorate.

Mr. Birkbeck has served the Company most ably for a period of twenty-six years. He joined the Board as a Director in 1927, became Chairman in 1948, which office he held until August, 1952, when he resigned from the Chair but retained his seat on the Board. During his long period of service as a Director his wide experience was of great benefit to the Company, and his kindly personality endeared him to his colleagues. I am sure you will all join with me in wishing him happiness and health.

The vacancy on the Board of Directors has been filled by the appointment of Mr. Leslie George Lanyon who, as Managing Director of several large companies, has gained wide commercial and administrative experience which will be of the greatest value at the Board table.

Staff

I record with pleasure your Directors' appreciation of the splendid services rendered the Company during the year by the Manager, the Executives, and all the Employees.

T. & G. Mutual Life Society

CONTINUED PROGRESS

ASSURANCES IN FORCE EXCEED £280,000,000.

At the 77th Annual Meeting held on Wednesday, 23rd December, at the Society's Head Office, the Chairman, Mr. J. T. Thompson, said:—

New Business.

"I am pleased to report once again an excellent volume of New Business in the Life Departments, comprising 119,316 policies assuring £39,922,798. This amount of New Business, the highest ever recorded, exceeds the previous year's aggregate by £3,031,457. In the Accident Department 14,349 policies were issued and Accident Benefits assuring £12,920,221 were added to 32,804 life policies. It is gratifying to note that a large number of policyholders in the Life Departments have taken advantage of the opportunity of attaching to their policies valuable Accident Benefits available to them. The whole of the New Business was derived from Australia and New Zealand.

The Group Assurance Department experienced another very successful year, completions again being a substantial percentage of the business written in the Ordinary Department. Group Assurance Policies provide for life assurance, endowments, annuities and other benefits usually found in individual policies. Membership of a Group, however, is especially advantageous as the premiums are usually met by regular deductions from wages, the Society receiving one cheque covering all payments. The Society has been entrusted with the Group Assurance contracts for the benefit of employees of some of the largest Institutions and Companies, due, I feel sure, to the splendid service rendered by the Society's trained Officers. This service continues actively for as long as the contract endures.

Income and Payments to Policyholders.

The cumulative effect of the steady growth of New Business is to increase the Society's Income, which amounted last year to £15,970,476. This exceeded the previous year's Income by £1,203,967. That such a large amount in one year should be diverted from spending power to National Savings is very gratifying. Disbursements made last year include the large total of £6,170,778 to policyholders and their dependants.

Expenses of conducting and extending the business are greatly affected by the high level of wages under Industrial Awards and resultant high cost of commodities and essential services. The ratio of total expenses (including all taxes and contributions to Staff Superannuation) to total income shows a decrease from 16.31% to 15.76% in the Ordinary Department. In the Industrial Department, where the agent renders extra service, including frequent attendances at the homes of policyholders, the rate was reduced from 32.07% to 31.88%. The question of further economy is receiving unremitting attention. As I mentioned last year, steps have been taken for additional mechanisation on a large scale, but some time must elapse before the change of system will be completely effective.

Assurance Funds.

The Funds increased by £6,264,187 to £86,425,394. As the Society is conducted on the mutual system these Funds are held solely for the policyholders, to meet future liabilities under existing contracts. These Funds are built up by millions of separate payments every year, some of which, particularly in the Industrial Department, are so small as to be incapable of yielding much interest if individually invested. However, when paid to the Society, they form a huge reservoir of funds upon which the satisfactory rate of interest applicable to large-scale investments is obtained. This is one of the main advantages derived from the co-operative system of a Mutual Life Society. It is customary for the Society to invest a substantial percentage of its Funds to provide capital for developmental works and the expansion of industry. Last year the amount invested in Government and Public Body securities in Australia and New Zealand increased by well over £2,000,000. Loans on mortgage include investments in industrial companies for the expansion of secondary industry. They also include a very large number of loans to policyholders under the popular home purchase system, under which borrowers take out life policies so that in the event of death of the borrower the loan would either be reduced to a comparatively small amount, or completely repaid, leaving an unencumbered title to his beneficiaries.

The book value of the Society's premises has increased by £193,255, mainly due to the acquisition of buildings for the Society's use in various parts of the Commonwealth. Most of the Society's splendid buildings were purchased or erected many years ago and, therefore, stand in the books at a very conservative figure.

The rate of interest earned in the past year on the Mean Assurance Funds in the Life Department was £3/15/9%, an increase of 1/8% over the previous year's rate.

Actuaries' Report.

The conservative bases of valuation adopted last year were used again and the surplus was £1,593,689, of which £1,462,053 was allocated for Reversionary Bonuses. It has not been possible to continue payment of the same scale of bonuses in the Industrial Department, but provision has been made for an increase in the bonus scale in the Ordinary Department.

Value of Voluntary System.

As the Society continues on its traditional course with unswerving faith in the value of thrift to every member of the community, it is very gratifying to find so many people willing to use Life Assurance to obtain protection against the uncertainties of life and to secure something more than a modicum of comfort in their old age. The very large volume of New Business completed last year truly reflects the value and extent of services rendered by members of the Society's Field Staff in soliciting applications for policies and advising applicants of the most suitable arrangements for family protection. The prospects for expansion in the immediate future are excellent. The National Income from the export of wool and other primary products remains relatively high, and a measure of stability has been reached in the trend of wages, although much remains to be done towards reducing costs. I am confident that the results of the ensuing year will reveal continued progress by your Society.

Staff.

I have already referred to the highly commendable efforts of the Field Staff. I should also like to thank the Indoor Staff for the excellent work performed by them. On behalf of the Board and myself, I take this opportunity of expressing sincere appreciation of the valued services rendered by the Field and Indoor Staffs and of their loyal and devoted attention to the interests of the Society and its policyholders."

Retiring Directors, Messrs. R. A. Rowe and D. I. Menzies, Q.C., and retiring Auditors, Messrs. J. M. F. Relph and W. M. Scott, were re-elected.

Trans Otway Limited

Road Service Operators, Hotel and Guest House Proprietors.

Reg. Office: Cnr. Ryrie & Fenwick Sts., Geelong, Vic. **Directors:** F. P. Just (Chairman), E. W. Batson, H. A. Cobbledick, A. J. B. Deacon (Manag. Director), D. H. Prince, K. W. Quick, F. P. Selleck. **Auditors:** Neilson & Neilson.

5th Year ended June 30, 1953. Meeting October 1, 1953.

Higher freight rates and increased traffic resulted in an improved profit of £8,856, representing a return of 4.7% on capital. A dividend of 4% was paid after the omission of last year's dividend.

The company's main interest is a chain of road, passenger and freight services operating from Melbourne and Geelong to Lorne, Apollo Bay and Warrnambool.

A subsidiary holds the lease of the Hotel Ballarat at Apollo Bay and provided a dividend of £1,900 in the latest year.

The San Toy Cafe and Guest House (now renamed Ocean Road Cafe and Guest House) has been leased and it is proposed to retain this property, which is in the main street of Lorne.

The Chairman, Mr. F. P. Just, gave the following address to shareholders at the Annual Meeting on October 1:

In my address to you last year I stated that your Directors had carefully pruned all costs and investigated ways and means of increasing revenue, and that consequent upon such action they were confident that a much improved position would be presented at the end of this year.

I am very happy today to be able to say that the result of this year's trading shows that such confidence was fully justified and what is more, your Board feels confident such improvement will at least be maintained.

Profit and Loss Account.

The net profit for the year is £8,698 after providing £6,309 for depreciation and £5,671 for income tax. The gross profit brought forward from the working account is £40,411 as against £32,485 in the previous year, an increase of £7,926.

Balance Sheet.

Shareholders' funds at £207,827 show an increase of £13,757; current assets at £33,143 show an increase of £687, while current liabilities at £17,288 show a decrease of £14,976 as against the previous year.

The improvement in the company's position is clearly reflected in the above figures which show that while the current assets have slightly increased, the current liabilities have decreased by nearly 50%.

Consolidated Profit and Loss Account and Balance Sheet.

These statements include the figures of Trans Otway Hotels Pty. Ltd. This company's net profit exceeded that of the previous year, and a dividend of £1,900 was declared and received by Trans Otway Limited.

Dividend.

Your Directors have pleasure in recommending that a dividend of 4% be paid out of the year's profit. This will absorb £7,600, leaving a balance of £5,599 in the appropriation account.

Passenger and Freight Services.

Although costs continued to increase during the year, there was evidence of a gradual arresting of the inflationary spiral. Particular attention was paid to devising methods for combating cost increases. It was decided not to apply for any increases in fares on our passenger services, but rather to try and offset cost rises by increasing traffic. This policy has so far been effective.

It was necessary, however, to increase freight rates, as these had not previously been increased in proportion to the rises in costs. The Prices Branch, who control freight rates, approved of applications for increases during the year and authorised a special schedule of rates covering all of our services.

The sale of the Lorne freight service has been more than justified by the resulting decrease in overhead and operating costs and the improved operating conditions and results of the Apollo Bay service.

The full results of the authorised increases in the freight rates are not fully reflected in the year's accounts, as they have only operated for the latter half of the year.

Weather conditions during the early part of the year caused several road blockages and adverse publicity had a very detrimental effect on traffic during the months of Spring. It was not until Christmas, in fact, that traffic again started to move in a normal manner, although our services continued with very little interruption. I would like to pay a tribute to the staff of the C.R.B. for their co-operation and assistance in keeping the road open for us to maintain our services.

Your Directors have thought that greater publicity should be given to facilities that Lorne and Apollo Bay offer for Spring and Autumn holidays, together with the advantages which would accrue to business people in both places and, incidentally, ourselves, if larger numbers could be attracted during these seasons. Steps are being taken to obtain the co-operation of all concerned in Lorne for the establishment of an advertising fund to finance publicity in this direction, and we are optimistic that our efforts will be successful.

Your Directors also ask that the shareholders themselves give their assistance by publicising the holiday advantages of the resorts served by us.

San Toy Cafe and Guest House.

The San Toy Cafe and Guest House, which has been re-named Ocean Road Cafe and Guest House, is being carried on under lease on terms which your Directors feel are reasonably satisfactory and prevent any recurrence of the losses as sustained in previous years. It is considered that property in the main street in Lorne will gradually increase in value and the potential value of this site for our future activities cannot be assessed. It is, therefore, deemed expedient for the time being to retain the freehold until such time as future trends are discernible.

General.

During the year the company was able to dispose of its freight depot in Gheringhap Street, Geelong, at the satisfactory figure of £9,750, and at once put in hand the erection of a new freight terminal on its site in Latrobe Terrace, which is now nearly

completed and will be in full operation within a few weeks. The contract price for its erection is £9,870, which means that for practically the same money the company has a new and up-to-date freight terminal on a better site with much greater space and earning capacity.

Every opportunity is being and will be taken to obtain additional revenue, and an important addition to our activities during the year was the distribution agency obtained in Geelong and district for the Olympic Tyre Company's products and with the new terminal other sources of revenue will become available.

Having regard to the extremely difficult economic times which the company has encountered almost since its formation, your Directors consider that it augurs well for the future by the fact that it has been possible to weather such adverse conditions and to emerge into a profit making position. The continued improvement in our activities as shown by the figures over the past three months justifies the confidence I have always had in the possibilities of our services.

In April last our co-Director, Mr. F. P. Selleck, embarked for a trip abroad, and during his absence Mr. K. G. Colhoun has acted on the Board as his alternate director. Mr. Colhoun, with his business and special accountancy knowledge, together with his very keen interest in the company's activities, has proved a very worthy substitute, and I extend to him on behalf of the Board and all shareholders our sincere thanks and appreciation for the time and effort he has given on the company's behalf.

In conclusion, I wish to thank the management and all members of the staff and all employees for their co-operation and assistance, together with their diligence and loyalty to the company's interests.

Also I particularly want to thank the shareholders for their loyalty to the management and to the Board.

I feel sure that next year your Chairman will again have the pleasure of placing before you a report which will be even more satisfactory than the one I have had the pleasure of presenting to you today.

At the Annual Meeting of the Company held on October 20, the Acting Chairman, Mr. W. J. King, delivered the following address:

The Chairman in his address last year reported the decline of business in the hardware section of the Company's activities. Despite a temporary improvement during August and September last year, trading conditions generally were difficult. Hand in hand with an active selling policy steps were taken to adjust production in accordance with demand. As was anticipated, the large stocks in the hands of merchants and retailers have to a considerable degree been disposed of, and since the close of the financial year a heartening improvement in demand has been shown.

The increases in costs of raw materials and labour which took place during the year had to be absorbed by the Company. To some extent, improved efficiency of labour offset these increases.

The Company's hardware products are becoming even more widely known and are continuing to gain favour with resellers and consumers. The Directors feel that there will be an increasing demand for the Company's products and it is their policy to constantly improve the quality and to develop new lines in this field.

Vacuum Pumps and Engineering

Despite the difficulties facing the dairying industry generally, reference to which was made in the address last year, sales in this section showed some improvement during the year. The general engineering activities of the Company have contributed satisfactorily to the result for the year.

Forging Division

Directors are confident that the modern forging equipment which is now operating at Westall will amply justify the investment. The development of any such activities inevitably takes much time and money, and this has been a considerable drain on both the profits and the liquid finances of the Company. Not only are new projects being devoloped at this division, but certain operations in connection with existing projects previously carried out at Footscray, have been transferred to the new division, with promising results.

Bruthen Handles Pty. Ltd.

This subsidiary has operated satisfactorily during the year, despite the fact that production had to be somewhat curtailed as a result of the generally lower level of hardware sales. The Directors are of the opinion that the investment in this subsidiary is a wise one, for supplies of handles are now assured at competitive prices. Although greater supplies from outside manufacturers are now available, it is considered that the investment must be maintained to guard against the risk of a shortage in the future such as hampered activities so seriously recently, when demand was intense.

General

The Directors are confident that, provided reasonable protection is afforded the industry, satisfactory profits can be expected.

Directorate

Your Directors accepted with regret the resignation of Mr. Harris as a Director and Chairman of Directors from June 30, last. He is proceeding abroad, and we hope that he will enjoy a well merited retirement.

Mr. J. R. Bishop is also abroad, but is represented at this meeting by his alternate, Mr. K. G. Luke. It is not proposed to make an appointment to the Board to fill the vacancy caused by Mr. Harris' retirement pending the return of Mr. Bishop.

Yarra Falls Ltd.

Textile Manufacturers.

Reg. Office: 452 Johnston St., Abbotsford, Vic. **'Phone:** JA 3116. **Other Share Register:** London. **Directors:** A. C. Wilkinson (Chairman), N. DeW. Robinson, A. Hordern, N. Hill, A. W. Briggs, Wm. Gluth. **Auditors:** Cook, Tomlins & Mirams.

30th Year ended June 30, 1953. Meeting October 21, 1953.

Rapid recovery was experienced in the latter half of the year; sales totalled £4,822,431 to provide a profit of £240,891 (last year £73,012) after taxation at old rates. The 8% ordinary dividend rate was maintained.

In his address to shareholders at the Annual Meeting held on October 21, the Chairman, Mr. A. C. Wilkinson, said:—

In view of the conditions of trade in the early months of the financial year, the Consolidated profit of £243,143 is considered satisfactory. Of this amount £151,834 was earned by Yarra Falls, and £91,309 by Globe and Byfas. Owing to the over-importation of textiles, all three Companies experienced slackness of trade during 1952, but the recovery after stocks were liquidated was very rapid. Buyers' confidence was restored and early deliveries were demanded. Although every effort was made to keep our employees in work during the recession, many sought and obtained employment elsewhere, with the result that it took some considerable time to get the mills back into normal production, whilst the changes in fashion requiring new styles and settings added to the difficulties. However, I am glad to say that we now have ample orders on our books to keep the mills in work for several months.

The total sales for the year of the three Companies amounted to £4,822,431, which, with investment income of £7,587, made the total amount received £4,830,018, which nearly equals the 1951 figures, and is approximately £475,000 more than for 1952.

You will have noted from the Consolidated Appropriation Account that the sum of £50,000 has been transferred to Special and Contingency Reserve Accounts—this restores the amounts taken from those accounts last year. The credit of £65,000 is as explained in the Report of Directors, a writing back of a long-standing accumulation of surplus taxation provisions. Provisions were conservatively calculated, and each year the amounts provided were a little more than the amount of tax assessed. Although this year's profits were sufficient to pay a higher final dividend, your Directors deemed it prudent and in the best interests of the Company, to limit the total distribution for the year to 8%.

The reduced Company taxation announced in the Federal Budget is a welcome relief and will help to strengthen the Company's financial position. Our provisions were at the old rates, so an adjustment will appear in next year's accounts.

The new building at Dandenong is shown in a photograph included with this year's report; this is an up-to-date mill, and the spinning and weaving machinery at this branch is now complete and fully employed. Manufacture of the wool tops used and the finishing of the cloth woven is carried out at the Abbotsford mill.

Wool Markets—Synthetics

The new season's wool market opened on a firm basis with wide competition, and present indications suggest that values will be maintained. It would be idle to ignore the significance of the continuing development of synthetic fibres, but it would seem that much of the high pressure propaganda in their favour is unwarranted—reports from the U.S.A. support this view. We feel that for a long time yet the premier fibre will continue to be wool, and there will be room "at the top" for high grade materials made of pure wool, despite the fact that the consumer allows the price factor to influence his judgment regardless of the inferior serviceability of the lower-priced product.

A matter of immediate concern is the great increase in costs of production; the high wages now paid in Australia are making it extremely difficult to export manufactured products at competitive prices, and they also encourage importations from overseas where wages are lower. Therefore, Australian manufacturers are faced with two adverse effects of high wages—loss of exports and increased competition for local business. The suspension of the quarterly cost of living adjustments will give at least some temporary stability, but it is possible that it may delay a fall in costs which could come about with a lowering of the cost of living index.

Tariff Adjustments

In our own industry there has been no increase of the protective tariff since before World War II; in fact, there was reduction under the General Agreement on Trade and Tariffs.

Quite apart from substantial rises in wages owing to the rise in cost of living, there have been other major additions to wages such as increased margins, war loadings, increase of female wages from 54% to 75% of the male wage, a basic wage rise of £1 in December, 1950, increase of annual leave from 7 to 14 days, and in addition to all those items, the change to the 40-hour week. In 1952 the inadequacy of the Tariff was clearly demonstrated, but

e industry was saved by the import restrictions. When major reases in costs occur, which are caused by happenings beyond e control of the industry, tariff adjustments should be made thout waiting until the harmful effects of these increased costs come apparent by greater importations displacing the Australian-ade product.

Repeating what I said last year, I want to emphasize: "There ample productive capacity in Australia to supply all products wool that may be required, and the industry by its service to e nation in both peace and war, has earned the right to expect and receive adequate protection against importations of material from countries where the wage levels are much lower."

Staff

In the Report of Directors we referred to the deaths of our founder, Mr. F. F. Robinson, and of two of our Directors, Sir Walter Massy-Greene and Mr. Ernest Pearce. These three gentlemen each served the Company faithfully and well for many years.

Finally, I wish to compliment the Management and Staff upon the results of the year.

The Chairman, Mr. E. Tindal, delivered the following address the Annual Meeting on September 22:—

In spite of keen competition and a general slackening off of rk in the heavy industry the Directors, I am glad to say, are le to report a successful year.

In common with the Eastern States, there has been a restricted tput in our steel and iron foundries.

Against this our machine shop and fabrications sections have re-rded excellent results and the assembly shop has been fully cupied throughout the year, mainly on railway work.

Overseas Relations

With a view to furthering the Company's business and after nsultations with the local representatives of Kellogg Manufac-ring Co. our Managing Director, Mr. E. E. Tomlinson, journeyed America in December last and while there visited New York, icago, Milwaukee and Houston, returning through Los Angeles the end of January. His visit was mainly to secure contracts in nnection with Kwinana, but at the same time to get into touch ith other Companies who may become interested in Western stralia at some future date.

Pressure Vessel Contracts

The result of his visit was to obtain contracts for supply of essure vessels and lighters for Kwinana, and it is expected other rk for Kwinana will result.

The class of work for these Oil Refinery Vessels being to an nerican Standard Code is to an exceptionally high standard, cessitating specialised workmanship and, in addition, rigid in-ection requirements, supported by X-ray Photographic Plates.

In this latter respect, the Company was indeed fortunate in ssessing an Industrial X-ray Unit large enough to undertake e work. Although a tremendous amount of preparatory work s necessary to get the contract under way, obtaining approval design and manufacture procedures from Lloyds, the training specialised staff to carry out the work—deliveries have already en made to the Job Site at Kwinana. As a result of this contract opportunities will be available to the Company in a similar field.

Reference was made in the printed report to the four (4) 70-ton Lighters supplied to Kwinana because we believe that in undertaking this task so far from point of delivery and in the time required by our clients, a very creditable feat was performed.

During the past year, the Company executed a substantial order for Automotive Garage Hoists. These Hoists have been supplied to and installed in every State of Australia, and are reported to be giving excellent results.

Other contracts of value to the Company were also secured in the Petroleum Industry field.

Indian Tender

As reported, your Board are constantly investigating the near overseas markets as an avenue for the Company's products, and as some reward for the Company's persistence, we were invited by the the Railway Board of India to tender for the manufacture of Railways for India. It was known that very severe world-wide competition would be encountered, nevertheless a substantial tender has been submitted. Mr. E. E. Tomlinson is at present in India representing the Company at the opening of the Tenders. Even if the Company cannot obtain contracts this year in India, the visit of Mr. Tomlinson may result in future contracts, as India is launching out by railway projects. This is, of course, largely dependent on our economic conditions in competing with other countries. Directors will continue to investigate all avenues for substantial contracts.

Subsidiary

Turning now to the Subsidiary Company, Steam Generators Pty. Ltd., it will be observed from the Consolidated Accounts that a profit on operations was registered for the year, a true indication that the experimental stage has been passed, and if the popularity of the Subsidiary Company's range of steam boilers is sustained in other States of Australia (and avenues abroad are not being overlooked) the Subsidiary Company's future should be a bright one.

Valley Worsted Mills Limited

Reg. Office: Swanston St., South Geelong, Vic. **Directors:** C. J. Jones (Chairman), K. A. Wills, C.B.E., M.C., J. M. Pittendrigh, W. Pickles (General Manager), C. F. Meares. **Auditors:** Flack & Flack.

17th Year ended June 30, 1953. Meeting September 14, 1953.

Turnover was higher than in the previous year, although production was restricted following a flood in June, 1952, the second in twelve months. Profit recovered by £15,816 to £48,633, and ordinary dividend was lifted by 5% to 12½%.

The following statement by the Chairman, Mr. C. J. Jones (who was absent abroad on company business), was read at the Annual Meeting on September 14 by the Acting Chairman, Mr. K. A. Wills:

As Mr. C. J. Jones, the Chairman of the Company, is on his way to London in connection with affairs of his Company, he has sent me a statement which he requests to be read at this meeting.

Before proceeding with the main business of the meeting, it is with regret I have to inform you that, owing to continued ill health, Mr. J. M. Pittendrigh has decided to relinquish his position as Chairman of the Company, which office he has held continuously since the formation of the Valley Worsted Mills Pty. Ltd. in 1922, and of the present undertaking which was converted into a Public Company in 1937, extending over a period of 31 years. Throughout the whole of this time, Mr. Pittendrigh has played a most important part in the mill's development, and whilst he feels that he is no longer able to carry on the onerous duties as Chairman, we are pleased that he has consented to continue as a member of the Board, and we have been fortunate in having the benefit of his knowledge and experience gained over the many years of active association in the Woollen Textile Industry, particularly during the change-over from the favourable conditions of the boom years to those of a normal and more permanent nature.

In presenting the accounts for the year, I propose making a comparison of the principal items with those of the previous year, as follows:—

The trading operations for the year, after charging depreciation £26,992, and providing for taxation £57,718, and transferring £3,000 to staff superannuation reserve, show a net profit of £48,633.

A comparison of the trading result with that of the previous year is as follows:—

	1953.	1952.
Net profit	£48,633	£32,817
Percentage to shareholders' funds	4.62	3.11

BALANCE SHEET MOVEMENTS.

Fixed Assets.

Freehold Property and Buildings.—This asset, after taking into account the cost of the erection of the retaining wall as a protection against a recurrence of flooding, and charging depreciation for the year, now stands in the books at £118,622.

The buildings have been maintained in excellent condition throughout the year.

Machinery and Plant.—Further expenditure to the extent of £20,428 was made during the year with a view to maintaining the mill's equipment in an up-to-date and efficient condition, and after taking this item into consideration and writing off depreciation for the year, the assets now stand at £400,327.

A comparison of the fixed assets with those of last year is as follows:—

1953.	1952.
£520,784	£503,154

Investments.

As already mentioned, the Commonwealth securities which appeared in the previous balance sheet at £115,000 have been realised, and the proceeds are now being used in the business.

Current Assets.

A comparison of the stocks and debtors with those of the previous year is shown as follows:—

	1953.	1952.
Stocks	£463,867	£364,995
Debtors	216,896	132,383
	£680,763	£497,378

The increase in these items will be referred to in the course of my remarks.

Shareholders' Funds.

The shareholders' capital remains unchanged at £376,663, and the shareholders' funds in comparison with those of the previous year are as follows:—

1953.	1952.
£1,053,146	£1,057,980

Current Liabilities.

The comparative figures for sundry creditors and provision for taxation are as follows:—

	1953.	1952.
Sundry Creditors	£166,480	£111,647
Provision for Taxation	57,750	23,665
	£224,230	£135,312

Liquid Position.

	1953.	1952.
Liquid Assets	£680,823	£497,438
Less Liabilities	224,230	135,312
Surplus of Liquid Assets over Liabilities	£456,593	£362,126

It will be noted that the stocks at balance date, compared with those of the previous year, show an increase of £98,872, such increase being mainly due to the higher costs of raw materials and an increase in production costs. Further, it will be noted the debtors show an increase commensurate with the higher prices ruling for mill products.

Flood Protection.

It is to be expected that in the transitory period through which we are passing from favourable post-war conditions to those of a stable and more permanent nature, our company, in common with others, would experience many problems, including that of bridging over the disparity between the progressively increasing costs and greatly diminishing income. The repercussions of the second flood experienced by the mill in June of last year were carried forward into the year under review, with adverse effect. In view of the possibility of serious flooding in future, your Directors deemed it advisable to take all precautions, with the result that a specially constructed retaining wall has been erected on the lower ground levels which it is considered will adequately protect the mill in the event of any similar flooding in future. The total cost of this work amounting to £22,500 has been added to the book value of the mill property.

General.

Despite the many difficulties encountered during the past year, m confident you will agree the result shown is a highly satis-tory one, and that you will be in accord with the dividend re-mmendation for the payment of a final dividend of 8¾%, making otal distribution for the year of 12½% on both classes of shares.

The operations of the Enterprise Yarns (1951) Pty. Ltd. made isfactory progress during the year. Although this undertaking not yet reached a dividend paying basis, the early stages of elopment have been successful, and we anticipate that, apart m the invaluable assistance afforded our own manufacturing rations, some return in respect of this investment may be ex-ted in future.

Contrary to expectations of a year ago, when a fall in wool es was forecast, proceeds during the selling season ended June last showed a substantial increase, the total clip, comprising 8,753 bales having realised £356,576,000, the second highest re-n on record. As practically the whole of the clip has been dis-ed of, we anticipate the demand during the ensuing season will ctinue with prices remaining at present levels or thereabouts, thus ensuring continuity of production and favourable prospects for the disposal of our output.

In forming an estimate of the results of the operations of the current year, I feel that, whilst the present high level of Australian exports is maintained, the economic position will continue to be favourable, and if so, I anticipate that the mill will share in the general prosperity which may reasonably be expected in the present year.

I think shareholders should know that Mr. Wilfred Pickles, who has been our successful General Manager since 1931, is retiring from this position at the end of the year. He will be succeeded on January 1, 1954, by Mr. W. L. Wright as General Manager. Mr. Wright, as you know, is at present our Works Manager. I am sure you will be glad to learn that, although Mr. Pickles is retiring from the executive position, he will remain a member of the Board of Directors. May I also take this opportunity, on behalf of the Board and of shareholders, of publicly thanking Mr. Pickles for the great services he has rendered to the company.

In conclusion, I take this opportunity of expressing to the management and staff, on behalf of my colleagues and myself, our appreciation of their continued support and co-operation during the past year.

Wm. Haughton & Co. Ltd.

Wool, Skin Brokers, Merchants, Shippers, Underwriters.

f. Office: 545 Lt. Collins St., Melb. **'Phone:** MU 8611. **Directors:** R. F. Sanderson, C.B.E. (Chairman and Manag. Director), L. E. Lloyd, T. P. Strickland, R. J. McArthur, C.B.E., A. A. Fitzgerald, O.B.E., R. J. Southey. **Auditors:** Flack & Flack.

Year ended June 30, 1953. Meeting October 30, 1953.

Profits rose by half, reflecting the increased value of the stralian wool clip which was £98,000,000 higher at 5,000,000. Ordinary dividend was raised by 1% to 10% ter reduction from 12½% to 9% last year.

During his address to shareholders at the Annual Meeting held October 30, the Chairman, Mr. R. F. Sanderson, made the owing remarks:

As we are one of the largest buyers of wool and sheepskins n Australasia, the state of the markets for those commodities is f great importance to this Company. In contrast with the diffi-t trading conditions for these commodities, which Mr. Lloyd last r reported to you as having applied throughout the 1951-52 ason, conditions in 1952-53 can be described as quite satisfactory, t. the 1953-54 season has now opened on a satisfactory basis.

The Year's Result

Let us turn now to the Directors' Report, which you have ore you.

From that Report you will notice that we have made a net fit of £270,897, after making adequate provision for Depreciation t Bad Debts. After providing £113,687 for taxation on the year's ome, there remains a profit of £157,210.

In making provision for taxation, we have allowed for the ef in income tax to companies which was granted in the recent Commonwealth Budget. This was some measure of the tax relief which companies have been requesting in recent years. We benefited to the extent of £22,000 by the reductions, and this reduction in tax payable, combined with improved trading results, has enabled us to make substantial appropriations to reserves with the object of strengthening the financial structure of the Company, and making good part, at least, of the loss in purchasing power of the original capital, which has resulted from inflation in recent years.

Our first-mentioned appropriation is £15,000 to a provision for future United Kingdom taxation. The necessity for this provision is that in 1952 the Commissioners of Inland Revenue in the United Kingdom changed our fiscal year for income tax purposes from that ending 31st December to that ending 30th June, in line with our accounts. Although we have always set aside from the United Kingdom profits, sufficient provision to cover tax on those profits, your Board has deemed it prudent to appropriate the sum of £15,000 (Australian) to cover additional liability outstanding by reason of the change.

The sum of £10,000 was appropriated to Amortisation Reserve, bringing that Reserve up to £50,000. In this respect, your Board

(Continued on next page)

WM. HAUGHTON & CO. LTD. (Contd.)—

has in mind that, in due time, our properties will have to be replaced at increased costs.

Reserves

I should like to stress the importance of the Reserves and Undistributed Profits of the Company in relation to its financial stability. Reserves and Undistributed Profits are as follow:

Capital Reserves:	
Properties Revaluation Reserve	£116,275
Other Capital Reserves	8,544
A Total in Capital Reserves of	£124,819
Revenue Reserves and Profits:	
General Reserve	£200,000
Share Premium Reserve	102,181
Reserve for Possible Future Price Decline	50,000
Exchange Fluctuation Reserve	50,000
Amortisation Reserve	50,000
Profit and Loss Appropriation Account	37,324
A Total in Revenue Reserves and Profits of	£490,005
And a Grand Total of	£614,824

Total Reserves and Profits at £614,824 added to Paid-up Capital of £1,060,000 gives a total of £1,674,824 in Shareholders' Funds, thus providing good cover for both Preference and Ordinary Shares.

Out of profits of the year we paid £14,471 to Provident and Staff Benefits Funds. A contributory Provident Fund Scheme with a Life Insurance Company has now been in operation for 5½ years, but in addition to that, the non-contributory funds now have a total balance of £136,311.

Overseas Visits

During the year overseas visits were made by several of our Senior officers. Mr. N. Baker, our Sydney Wool Manager, visited Japan; Mr. J. K. Coombe, our Melbourne Wool Manager, visited Japan, United Kingdom, Europe, Canada and U.S.A.; Mr. J. Sharp, our Perth Wool Manager, visited South Africa, England, Europe, Canada, and United States; Mr. C. L. Hughes, our New Zealand Wool Manager, visited Australia; and Mr. S. Payne, our assistant Wool Manager in New Zealand, visited Australia and Japan. Mr. R. Paget, of our Toronto Office (Canada), is now on a visit to Australia and New Zealand, and Mr. Pickering, the Manager of our London Office, visited Australia during the year.

For training purposes we also interchanged junior wool-buying staff between Australia and England.

Our Bradford Office, established two years ago, is operating usefully. We have now gone into occupation of new office premises purchased at 88 Currie Street, Adelaide. Our London Office has now moved into more suitable rented premises in Bassishaw House, Basinghall Street, London.

Wool Futures

An event of importance to the wool trade during the year was the inauguration of the London Wool Terminal Market Association to introduce into the United Kingdom operations in Wool Futures. These had previously been carried on in Antwerp, Roubaix and New York. We formed a United Kingdom subsidiary company—Wm. Haughton & Co. (Futures) Ltd., of London and Bradford—and that company is one of the limited number which participate in floor membership of the Association. Through our Branch Offices we are now handling business in futures for wool clients.

Insurance

As explained at the Extraordinary Meeting we have just held, we shall, by mutual agreement, terminate the arrangement whereby we have acted as sole underwriting agents and managers of the Marine Department of the General Accident, Fire and Life Assurance Corporation Limited. Satisfactory steps have been taken to protect our interests in this class of business.

I shall now deal specifically with the main divisions of our interests.

Wool

Exports of any country are of vital importance to the economy of the nation. To Australia, with less than nine millions of people, and having therefore a small domestic market, her exports are of still greater importance than to a larger nation. When we consider that wool exports are, in value, 3½ times greater than the next exportable product—Wheat—and approximately one-half of Australia's total exports, it can be seen that wool prices are of tremendous importance to every family in this Commonwealth.

It is interesting to relate the figures of the past five seasons:

1948/49	£194,000,000
1949/50	£286,000,000
1950/51	£636,000,000
1951/52	£307,000,000
1952/53	£405,000,000

The value of last year's clip was up £100,000,000, or one-third greater than the preceding year, and it was the highest but one of the years on record.

It is still more than £200,000,000 below the boom year 1950/51, which upset so greatly the financial structure of Australia.

In quantity, the Australian wool clip has grown to 3,888,752 bales in 1952/53, which is the highest year on record, and compares with 3,409,312 bales for 1951/52.

The average prices per bale for the last three seasons compare:

1950/51	£180
1951/52	£90
1952/53	£104

The same trend recorded in price per lb. reads:

1950/51	144d.
1951/52	72d.
1952/53	82d.

Our New Zealand Branch plays a very important part in the purchase of that Dominion's wool. Compared with Australia's total of nearly four million bales, the wool clip sold in New Zealand for 1952/53 was 918,000 bales worth £60 million. The previous season they sold 927,600 bales for £52.7 million.

Their average price per lb. was 46d. That contrasts with the average of 82d. per lb. for Australia, and reflects the fact that theirs is a coarser wool, the Australian clip containing 72% of merino wool.

Last year Mr. Lloyd warned you of the danger to the wool market of coarser wools, of the fact that two years' clips were then unsold in the Argentine. The effect of the realisation of the Argentine surplus has not been as serious as was expected, and the unsold wool in that country is now down to what is considered a normal level. The incidence of the Korean Armistice has not resulted in any fall in wool prices.

The exports of wool to different countries for the past two seasons compare:

	1951/52		1952/53	
	Bales	% of Our Exports	Bales	% of Our Exports
United Kingdom	881,000	28.5	1,318,000	37.1
France	478,000	15.5	538,000	15.1
Japan	333,000	10.8	500,000	14.1
Italy	303,000	9.8	331,000	9.3
U.S.A.	548,000	17.7	267,000	7.5
Belgium	206,000	6.6	250,000	7.0
Germany	98,000	3.2	146,000	4.1
All Other Countries	245,000	7.9	207,000	5.8
	3,092,000	100	3,557,000	100

Sheepskins

There were no severe fluctuations in the market during the year and prices closed generally about 10% to 15% higher than those ruling at the beginning of the financial year. This assisted our trading, and turnover for the year showed an increase both in volume and money, compared with the season 1951/52.

Hides

Controls covering Australian domestic hide requirements are still in operation. With the increased volume of turnover this year the margins provided have proved adequate.

In the export section, more hides have been available, and this has resulted in more turnover for this department.

Shipping and Travel Agencies

A satisfactory number of loading vessels were handled in Melbourne and Portland through our Victorian Agency for the Clan Line and Scottish Shire Line (Joint Service). The results disclose the improvement expected from increased export activity during the year, and the outlook for the current year is again promising.

Interstate and Overseas Airways bookings through our Travel Department continued to improve.

In the belief that Portland will eventually become a port of much activity serving the great Western District of Victoria and south-east of South Australia, your Company has purchased a property to meet the needs of development in this centre. Likewise, in Albany, Western Australia, negotiations are going on to secure a similar property in that centre.

Timber

The Timber trade has largely overcome the difficulties of a year ago caused by the temporary oversupply of imported timber. Import restrictions still apply, but they have been eased.

Our business in locally produced timber has been improved. In this we dispose of stocks from our own miller suppliers.

Merchandise

Our Merchandise Department has continued to develop. Our activities are principally in the supply of selective weedicides and spraying machinery, and machinery for the bulk handling of wheat.

The more important phases of our Merchandise Section are, like the bulk of our other interests, closely linked with agricultural and pastoral production. However, our Merchandise operations also embrace in a substantial way the distribution of aluminium products, hardware and softgoods.

Overseas Branches

Satisfactory progress is reported from our London and Bradford branches and from those in New Zealand.

Staff

On your behalf, I desire to thank all members of the staff throughout our widespread organisation for the efficient manner in which all duties are carried out.

On this occasion, perhaps more than hitherto, because of my visit last year, I can testify to the loyalty and team spirit which has played such a large part in bringing about the result in our year's trading.

Wormald Bros. (South) Limited

Fire Protection Engineers.

The Chairman, Mr. J. K. Wiles, gave the following address to shareholders at the Annual Meeting on September 30:

Audited net trading profit is £72,281 before making a provision of £25,600 for income tax and after charging £13,441 depreciation. The final net result for the year is £46,681 compared with £55,115 in the previous year. Turnover was slightly greater than last year. Gross profit on trading was virtually the same as for the previous year, but increased selling and distribution expenses have brought about a reduction in net profit.

Marketing Organisation.

Changed conditions from a sellers' to a buyers' market being experienced in Australia today are practically world-wide. Your Directors realised some time ago it would be necessary to extend the Company's advertising programme, also to establish on a sound, permanent basis, branches in the various States in order to meet competition and to assist in better distribution and servicing of the Company's products.

Suitable buildings have been erected on freeholds at Brisbane and Sydney. Since the close of accounts, properties have been purchased at Fremantle, Western Australia and at Maitland, South Australia.

I feel that the new interstate staff appointments and the establishment of branches will be of considerable benefit in the ensuing year.

Products.

Reference was made in my previous report to the broadening of the range of farming implements and steel buildings. Implements successfully developed during the year just concluded include the "Coronation" Spring Draft Scarifier, 16 and 20 Furrow Twin Disc Plough and the "Goliath" Disc Plough. The steel buildings range now includes much wider spans than previously. The continued demand for our products indicates that they are firmly established in all States.

The Company's development programme for the current year will include several new implements suited to the latest farming methods.

Financial Position.

The new capital issue during the year has increased our issued capital by £60,000 to £255,664. Fixed assets now total £200,900 (1952, £173,695). Patents rights, £16,000, remain unchanged. Current assets, comprising stock on hand, sundry debtors, etc., stand at £389,325 (1952, £358,324). Total assets have increased to £606,225 (1952, £548,019). Liabilities have been reduced from £260,391 in 1952 to £222,355.

Buildings and Plant.

Reference was made in my last address to the new foundry and tool room equipment. It was felt that we should defer the erection of the new foundry building as we are developing a new wide span steel structure. The company's architects and engineers have now finalised these plans and operations will commence almost immediately. Therefore, the development of the wide span building will be simultaneous with the erection of the foundry. Plant for the foundry has been purchased, and the tool room additions are proving their worth.

Additional land was purchased in Manchester Street, Mile End, and new buildings include a Construction and Experimental Shop, Garage, Workshop, also extensions to the main Store.

Although portion of the factory damaged by fire in August, 1952, has been replaced, some reinstatement is still to be effected, therefore you will notice in the Balance Sheet an amount of £8,490 for Insurance Reserve.

Dividends.

An interim dividend of 6¼% was paid in April last, and your Directors recommend that a final dividend of 6¼% (making a total of 12½%) out of the profits for the year be declared payable on 31st October, 1953. Transfer books and register of members will be closed from 17th to 31st October.

Reserves.

Reserves and accumulated profits have increased from £91,964 to £131,165, and this may be considered very satisfactory.

Directors.

Two Directors, namely, Mr. I. W. Wiles and Mr. R. M. Wiles, retire by effluxion of time in accordance with Article 82 and, both being eligible, offer themselves for re-election.

You will have noticed in the Directors' Report that they recommend increasing the Directorate by the appointment of Mr. E. R. Tuck. I have known Mr. Tuck personally for many years and can speak highly of his sound banking and finance experience, and feel sure that his appointment will meet with your approval.

Mr. I. W. Wiles has been appointed as Resident Director for New South Wales and Queensland, and will reside in Sydney, but will retain his seat on the Head Office Board.

These decisions will strengthen the Company's activities in all States.

Staff.

On behalf of the Board I would like to express our thanks and appreciation to all those employees who have contributed to the year's work. We also extend our thanks to all distributors and agents.

HILL 50 GOLD MINE N.L.—28/11/53: Directors announce that as the normal stope preparation above the 820 foot level has progressed results have now justified the treatment of higher grade ore. In the current four-weekly period the tonnage treated will be lower because of relining of both ore mills, but the grade of ore treated will be appreciably higher than the average grade for the past few months. Negotiations are in hand for the purchase and installation of a third mill to obviate loss of milling time.

	27 weeks	3 weeks	4 weeks	
	19/12/53	19/12/53	1/12/53	3/11/53

Fine oz.	56,783	4,307	4,429	4,611

OIL SEARCH LTD.—4/12/53: The prospecting licence over an area in the Exmouth Gulf district of Western Australia was surrendered several years ago and Oil Search Ltd. does not benefit in any way from the drilling now being conducted in Western Australia.

9/12/53: High pressure well-head and fishing equipment required for completion of Omati No. 1 test has now been shipped from U.S.A. and operations will be resumed in March. Road to Omati No. 2 location nearing completion and drilling at this site expected to commence in March. Three helicopters for servicing seismic surveys in difficult jungle terrain now on a survey at the junction of the Fly and Strickland Rivers.

PEKO (TENNANT CREEK) GOLD MINES N.L.—Development continued off the east drive for 52 feet. Copper values 9.5% to 14.9% and gold 8.5 to 12.0 dwts./ton. Building construction proceeding and it is hoped that an early commencement of operations can be achieved.

PIONEER MINES N.L.—Arrangements made with Poseidon N.L. which holds an option over the Yenberri Uranium Reserve north of Edith River in the Northern Territory to participate in the development of the exposure of Uranium (Torbenite) ore disclosed on that reserve and to assist in the search for further deposits.

SUGARLOAF TIN N.L.—Shareholders decided at meeting on ecember 4, 1953, that company be wound up voluntarily.

TARNAGULLA GREAT WESTERN N.L.—Shareholders' meetng held December 17, 1953, to consider winding up the company oluntarily.

TIN BENTONG N.L.—Shareholders decided at meeting on Noember 25, 1953, that company be wound up voluntarily.

URANIUM DEVELOPMENT AND PROSPECTING N.L.—/12/53: Mine Manager appointed and expected that during next ew days a contract will be signed for shaft sinking and cross cutting on the company's Edith River option. It is proposed that work will continue throughout the Wet Season.

URANIUM MINES N.L.—See Report from Norseman Gold Mines N.L., 10/12/53. 18/12/53: Both companies acting in conjunction have pegged a number of leases in the vicinity of Lake Dundas in Western Australia. Along the 4½ miles pegged, strong radio activity has been found in a number of places. The radio-active element has now been identified as uranium. Although investigations are far from complete, the indications are that the occurrence is of considerable importance.

Lead Concentrates Produced—6,871 tons—assaying: 73.0% (4,950 tons) lead; 38.6 oz. (261,987 oz.) silver; 4.4% zinc.

Zinc Concentrates Produced—7,091 tons—assaying; 0.6% lead; 1.6 oz. silver; 51.6% (3,658 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/7/53 to 31/12/53), compared with the same period last year—

	Lead Concentrate Lead	Lead Concentrate Silver	Zinc Concentrate Zinc
1953 (27 weeks)	35,807 tons	1,369,343 oz.	18,439 tons
1952 (27 weeks)	23,768 tons	1,161,469 oz.	16,988 tons

THE ZINC CORPORATION LTD.—

Four weeks ended November 21, 1953.

Ore Treated—43,271 tons—assaying: 16.3% lead; 3.5 oz. silver; 11.8% zinc.

Lead Concentrates Produced—8,871 tons—containing: 6,596 tons recoverable lead; 142,992 oz. silver.

Zinc Concentrates Produced—8,686 tons zinc—assaying: 53.5% (4,647 tons) zinc.

Lead and silver recoverable in lead concentrate and zinc in zinc concentrate produced during the current financial year (1/1/53 to 21/11/53), compared with the same period last year—

	Lead Concentrate Lead	Lead Concentrate Silver	Zinc Concentrate Zinc
1953 (46 weeks)	71,564 tons	1,599,926 oz.	52,681 tons
1952 (46 weeks)	50,559 tons	1,183,318 oz.	41,536 tons

HIS FUTURE . . .

Your Will may bear largely on the future of one or more members of your family. It necessitates continuous, proper administration. A life-long friend whom you wish to appoint as trustee, may, for a number of reasons, be incapacitated. The appointment of The Fidelity Trustee Company ensures perpetual specialised administration, conducted with sympathy and understanding.
The advantages of The Fidelity Trustee Company, acting for you, are many. Your dependants will be saved confusion, expense and delay. Freedom from influence or prejudice ensures that your estate will go to those whom you desire to benefit. Highly trained executives of the Company always have the necessary time to devote to any problems arising, thus giving continuous skilled administration.
Experience and specialised knowledge, after 62 years' service to the public, guarantees proper administration. Telephone, write or call, and an executive of the Company will advise you immediately.

BROKERAGE

On **DEBENTURES OR INSCRIBED STOCK** which are a trustee investment authorised as such in the Commonwealth of Australia or in any State of the Commonwealth of Australia, one-quarter of one per cent. on paid-up value, both in the case of buying and selling, except on and after the half-yearly interest date immediately preceding the due date of the loan when one-half of these rates shall be charged.

On securities issued by the Commonwealth of Australia amounting to not more than £40 face value of any one issue, brokerage shall be 1/- per £10 both in the case of buying and selling.

On **ALL OTHER DEBENTURES AND INSCRIBED STOCK** one half of one per cent. on paid-up value both in the case of buying and selling, **except** Company Debentures which are to be redeemed by the company, or entitle the holder to demand redemption, within six months after date of sale, on which the rate is one-quarter of one per cent. on paid-up value, both in the case of buying and selling.

On **SHARES IN COMPANIES OTHER THAN MINING**, but including classified Coal, and on Fixed Deposit Receipts, both in the case of buying and selling:—

Price 2/- per share or under	½d. per share
Over 2/- to 5/- per share inclusive	1d. " "
" 5/- " 10/- " " "	2d. " "
" 10/- " 20/- " " "	3d. " "
" 20/- " 30/- " " "	4d. " "
" 30/- " 40/- " " "	5d. " "
" 40/- " 50/- " " "	6d. " "
" 50/- " 60/- " " "	7d. " "
" 60/- " 80/- " " "	8d. " "
" 80/- " 100/- " " "	9d. " "
" 100/- per share	¾ per cent.

Except with the special permission of the Committee, brokerage at double these rates shall be charged both in the case of buying and selling shares in companies as aforesaid, which are not officially quoted on a recognised Stock Exchange in any capital city of the Commonwealth of Australia or on any Stock Exchange affiliated to The Stock Exchange Association of New Zealand.

On **SHARES IN MINING COMPANIES** (except mining Syndicates as hereinafter provided and classified Coal Companies) both in the case of buying and selling:—

Price 1/- per share or under	½d. per share
Over 1/- to 3/- per share inclusive	1d. " "
" 3/- " 5/- " " "	1½d. " "
" 5/- " 10/- " " "	2d. " "
" 10/- " 20/- " " "	3d. " "
" 20/- " 30/- " " "	4d. " "
" 30/- " 40/- " " "	5d. " "
Over 40/- to 50/- per share inclusive	6d. per share
" 50/- " 60/- " " "	7d. " "
" 60/- " 70/- " " "	8d. " "
" 70/- " 80/- " " "	9d. " "
" 80/- " 90/- " " "	10d. " "
" 90/- " 100/- " " "	11d. " "
" 100/- per share	1 per cent.

MINING SYNDICATES.—On shares in any mining company having not more than 5,000 issued shares (and in such other companies as the Committee may from time to time determine) both in the case of buying and selling:—

Price £1 per share or under	1/- per share
Over £1 to £3 per share inclusive	1/6 " "
" £3 " £5 " " "	2/6 " "
" £5 " £10 " " "	5/- " "
Over £10 to £50 per share inclusive	10/- per share
" £50 " £100 " " "	20/- " "
" £100 per share	1 per cent.

ON **RIGHTS TO A NEW ISSUE BY ANY COMPANY**, brokerage shall be charged on contract price at double the ordinary rates both in the case of buying and selling except when the contract price is three pence or less, in which case the selling brokerage shall be charged at one-halfpenny per right.

A member acting as Broker both for buyer and for seller in any transaction shall charge each client brokerage at the rates as prescribed by this Rule.

A Member transacting business in another market shall be entitled to charge the full rate of brokerage.

Where brokerage does not amount to 10/- on any transaction, a sum not exceeding 10/- may be charged.

VICTORIAN STAMP DUTY ON TRANSFERS OF MARKETABLE SECURITIES.

Stamp Duty is payable by the buyer at the rate of one-quarter per cent. of the purchase money for marketable securities acquired on a Victorian Register, or 6d. where such consideration money does not exceed £10. The duty is payable also on various types of Debentures and Inscribed Stock, including those of the Melbourne and Metropolitan Board of Works, Municipal Authorities, Gas and Fuel Corporation, Melbourne Harbor Trust, Melbourne City Council, State Electricity Commission, Grain Elevators Board of Victoria, and similar bodies. Exemptions from duty are provided for in the following cases:—

(i) Any transfer in respect to the purchase of securities of the Government of the United Kingdom, the Commonwealth of Australia or of any State of the Commonwealth, or of any other part of the British Dominions.

(ii) Any transfer in respect to the purchase of Victorian Savings Bank deposit Stock or debentures or Credit Foncier Debenture Stock.

(iii) Any transfer in respect to the purchase of shares (and "rights") in a company which is certified in the Government Gazette by the Comptroller of Stamps to be engaged (whether in Australia or otherwise) principally or solely in the search or mining for gold, or in a company engaged (in Australia) solely in the search or mining for petroleum.

(iv) Any transfer of marketable securities to a banker by way of security or a re-transfer of the securities by the banker to the former holder.

(v) Any transfer of marketable securities under deed of settlement or gift upon which stamp duty has been paid, or which is made to a beneficiary of a deceased person's estate.

(vi) A transfer of securities to a new trustee.

(vii) A transfer of securities by a Victorian executor or administrator of a deceased estate to an executor in another State on resealing in that State, or vice versa.

(viii) Transfer of securities from a company to its shareholders in the course of distribution of assets of the company, in a winding up, or on reduction of capital.

Duty may be denoted on the transfer by an adhesive stamp, which must be properly cancelled.

Victorian Receipt Duty is not required on a transfer on which ad valorem duty has been affixed. Where chargeable Receipt Duty is at the rate of 2d. per transfer when the consideration money is less than £25, and 3d. per transfer when the consideration amounts to £25 or more.

NOTE.—The above statement is not a complete summary of the Act, but contains some of the more important provisions as affecting investors in shares of listed companies.
